CONTENTS

CONTENTS.....	i
1 OVERVIEW.....	1
1.1 PREFACE	1
1.2 S-101 APPENDIX A; DATA CLASSIFICATION AND ENCODING GUIDE - METADATA	1
1.3 TERMS, DEFINITIONS AND ABBREVIATIONS.....	1
1.3.1 <i>Terms and definitions</i>	1
1.3.2 <i>Abbreviations</i>	2
1.4 USE OF LANGUAGE	2
1.5 MAINTENANCE.....	2
1.5.1 <i>Maintenance procedures</i>	2
1.5.1.1 Clarification.....	3
1.5.1.2 Correction	3
1.5.1.3 Extension.....	3
1.5.2 <i>Version control</i>	3
1.5.2.1 Clarification version control	3
1.5.2.2 Correction version control	3
1.5.2.3 Extension version control	3
2 GENERAL.....	3
2.1 FEATURE TYPES	4
2.2 SPATIAL TYPES.....	4
2.3 INFORMATION TYPES.....	5
2.4 ATTRIBUTES.....	5
2.4.1 <i>Attribute types</i>	6
2.4.2 <i>Mandatory attributes</i>	6
2.4.3 <i>Missing attribute values</i>	10
2.4.4 <i>Textual information</i>	10
2.4.5 <i>Spatial attributes</i>	10
2.5 DESCRIPTION OF TABLE FORMAT FOR S-101 META AND GEO FEATURES.....	11
3 ENC METADATA	12
3.1 ACCURACY OF DATA	13
3.1.1 <i>Accuracy of non-bathymetric data</i>	13
3.2 COMPILATION SCALE OF DATA	14
3.2.1 <i>Compilation scale</i>	14
3.3 COVERAGE.....	15
3.3.1 <i>Coverage</i>	15
3.4 HORIZONTAL DATUM SHIFT PARAMETERS	16
3.4.1 <i>Horizontal datum</i>	18
3.5 NAUTICAL PUBLICATION INFORMATION	20
3.5.1 <i>Reference to other publications</i>	20
3.6 NAVIGATIONAL SYSTEM OF MARKS.....	21
3.6.1 <i>Buoyage systems and direction of buoyage (see S-4 – B-461)</i>	21
3.7 QUALITY OF BATHYMETRIC DATA.....	24
3.7.1 <i>Quality, reliability and accuracy of bathymetric data (see S-4 – B-297)</i>	24
3.8 SOUNDING DATUM	26
3.8.1 <i>Sounding datum</i>	26
3.9 SURVEY RELIABILITY	28
3.9.1 <i>Survey reliability</i>	29
3.10 VERTICAL DATUM.....	30
3.10.1 <i>Vertical datum</i>	30
4 POSITIONS, DISTANCES, DIRECTIONS, COMPASS.....	32
4.1 CONTROL POINT.....	32
4.1.1 <i>Control points (see S-4 – B-304; B-305.1 and B-306)</i>	32

4.2	LOCAL MAGNETIC ANOMOLY	33
4.2.1	Local magnetic anomaly (see S-4 – B-274).....	33
4.3	MAGNETIC VARIATION.....	34
4.3.1	Magnetic variation (see S-4 – B-261; B-270 to B-273).....	34
5	NATURAL FEATURES	35
5.1	COASTLINE.....	35
5.1.1	Coastline (see S-4 – B-410 and B-411).....	35
5.1.2	Natural coastline (see S-4 – B-312 and B-353.8)	36
5.2	LAND ELEVATION	37
5.2.1	Height contours, spot heights (see S-4 – B-351 and B-352.1-2)	37
5.3	RIVER	39
5.3.1	Rivers (see S-4 – B-353)	39
5.4	RAPIDS	40
5.4.1	Rapids (see S-4 – B-353.5)	40
5.5	WATERFALL	41
5.5.1	Waterfalls (see S-4 – B-353.5).....	41
5.6	LAKE.....	42
5.6.1	Lakes (see S-4 – B-353.6).....	42
5.7	LAND REGION	43
5.7.1	Natural sceneries (see S-4 – B-350)	44
5.8	VEGETATION	46
5.8.1	Vegetation (see S-4 – B-312.4; B-352.4 and B-354).....	46
5.9	ICE AREA.....	48
5.9.1	Ice areas (see S-4 – B-353.8 and B-449.1)	48
5.10	SLOPING GROUND.....	49
5.10.1	Sloping ground (see S-4 – B-312.1; B-312.3; B-363.2 and B-364.1).....	50
5.10.2	Dunes, sand hills (see S-4 – B-312.3).....	50
5.10.3	Cliffs (see S-4 – B-312.1)	50
5.10.4	Cuttings and embankments (see S-4 – B-363.2 and B-364.1).....	50
5.11	SLOPE TOPLINE	51
5.11.1	Slope topline (see S-4 – B-312.1; B-363.2 and B-364.1).....	51
5.11.2	Cliffs (see S-4 – B-312.1)	52
5.11.3	Cuttings and embankments (see S-4 – B-363.2; B-364.1).....	52
5.12	PINGO.....	53
5.12.1	Pingo	55
5.13	TIDEWAY.....	56
5.13.1	Tideways (see S-4 – B-413.3)	56
6	CULTURAL FEATURES	57
6.1	BUILT-UP AREA.....	57
6.1.1	Built-up areas (see S-4 – B-370.3-4 and B-370.6-7).....	57
6.2	BUILDING, SINGLE	59
6.2.1	Buildings (see S-4 – B-325; B-328.1; B-362.2; B-370.3; B-370.5; B-372 and B-373.1-4; B-375.1,2; B-487.3)	61
6.3	AIRPORT/AIRFIELD	63
6.3.1	Airfields (see S-4 – B-366).....	63
6.4	RUNWAY	65
6.4.1	Airfields (see S-4 – B-366).....	65
6.5	BRIDGE	67
6.5.1	Bridges (see S4 – B-381)	69
6.5.2	Examples of Encoding Common Bridge Types	69
6.6	CONVEYOR	72
6.6.1	Conveyors (see S-4 – B-382.3).....	74
6.7	OVERHEAD CABLES	75
6.7.1	Overhead cables (see S-4 – B-382).....	75
6.8	PIPELINE, OVERHEAD	77
6.8.1	Overhead pipelines (see S-4 – B-383)	77

6.9	PYLON/BRIDGE SUPPORT	79
6.9.1	<i>Pylons and bridge supports (see S-4 – B-381.5 and B-382.1)</i>	80
6.10	FENCE/WALL	81
6.10.1	<i>Fences and walls</i>	82
6.11	RAILWAY	83
6.11.1	<i>Railways (see S-4 – B-328.4 and B-362)</i>	83
6.12	ROAD	84
6.12.1	<i>Roads and tracks (see S-4 – B-365)</i>	84
6.13	TUNNEL	86
6.13.1	<i>Tunnels (see S-4 – B-363.1)</i>	86
7	LANDMARKS	87
7.1	LANDMARK	87
7.1.1	<i>Buildings, landmarks, tanks, silos (see S-4 – B-373; B-373.6; B-374.3-7; B-375.1-2; B-445.8-9; B-456.2; B-487.3)</i>	90
7.2	SILO/TANK	92
7.2.1	<i>Tanks, silos (see S-4 – B-340.2 and B-376)</i>	93
7.3	FORTIFIED STRUCTURE	94
7.3.1	<i>Fortified structures (see S-4 – B-379)</i>	95
7.4	PRODUCTION/STORAGE AREA	96
7.4.1	<i>Production and storage areas (see S-4 – B-328.2; 367; 374.6)</i>	97
8	PORTS	98
8.1	WORKS UNDER CONSTRUCTION AND PROJECTED (SEE S-4 – B-329)	98
8.1.1	<i>Works on land (see S-4 – B-329.1)</i>	98
8.1.2	<i>Works at sea (see S-4 – B-329.2-5)</i>	98
8.2	CHECKPOINT	99
8.2.1	<i>Checkpoints</i>	99
8.3	HULKS	100
8.3.1	<i>Hulks</i>	100
8.4	PILES	102
8.4.1	<i>Piles (see S-4 – B-327.3)</i>	102
8.5	DYKE	104
8.5.1	<i>Dykes (see S-4 – B-313.1)</i>	104
8.6	SHORELINE CONSTRUCTION	105
8.6.1	<i>Coastline</i>	107
8.6.2	<i>Artificial coastline (see S-4 – B-313; B-320-322; B-324 and B-329)</i>	107
8.7	CAUSEWAY	109
8.7.1	<i>Causeways (see S-4 – B-313.3)</i>	109
8.8	CANAL	110
8.8.1	<i>Canals (see S-4 – B-361)</i>	110
8.9	DISTANCE MARK	111
8.9.1	<i>Distance marks (see S-4 – B-307 and B-361.3)</i>	111
8.10	GATE	112
8.10.1	<i>Gates (see S-4 – B-326.5-7)</i>	112
8.11	DAM	114
8.11.1	<i>Dams (see S-4 – B-326.7 and B-364.2)</i>	115
8.12	CRANE	116
8.12.1	<i>Cranes (see S-4 – B-328.3)</i>	117
8.13	BERTH	118
8.13.1	<i>Berths (see S-4 – B-323)</i>	118
8.14	MOORING/WARPING FACILITY	120
8.14.1	<i>Mooring / warping facilities (see S-4 – B-327.1-4; B-431.5-6)</i>	121
8.15	DRY DOCK	123
8.15.1	<i>Dry docks (see S-4 – B-326.1)</i>	123
8.16	FLOATING DOCK	125
8.16.1	<i>Floating docks (see S-4 – B-326.2)</i>	125
8.17	PONTOON	127

8.17.1	Pontoons (see S-4 – B-326.9)	128
8.18	DOCK AREA	129
8.18.1	Tidal and non-tidal basins (see S-4 – B-326.3-4)	129
8.19	GRIDIRON	130
8.19.1	Gridirons (see S-4- B-326.8)	130
8.20	LOCKS	131
8.20.1	Locks (see S-4 – B-326.6)	131
9	TOPOGRAPHIC TERMS.....	132
9.1	SEA AREA/NAMED WATER AREA	132
9.1.1	Sea areas (see S-4 – B-550)	133
10	TIDES, CURRENTS	134
10.1	TIDAL STREAM – FLOOD/EBB	135
10.1.1	Tidal stream (flood/ebb) (see S-4 – B-407 and B-407.4)	135
10.2	CURRENT – NON-GRAVITATIONAL	136
10.2.1	Current data (see S-4 – B-408)	136
10.3	WATER TURBULENCE	138
10.3.1	Overfalls, races, breakers, eddies (see S-4 – B-423)	138
10.4	TIDAL STREAM – HARMONIC PREDICTION	139
10.4.1	Prediction by harmonic methods (see S-4 – B-407.4 and B-408.2)	139
10.5	TIDAL STREAM – NON-HARMONIC PREDICTION	140
10.5.1	Prediction by non-harmonic methods (see S-4 – B-407.4 and B-408.2)	140
10.6	TIDAL STREAM PANEL DATA	141
10.6.1	Tidal stream panels (see S-4 – B-407 and B-407.2-3)	141
10.7	TIDAL STREAM – TIME SERIES	142
10.7.1	Tidal stream time series (see S-4 – B-407.4 and B-408.2)	142
10.8	TIDE – HARMONIC PREDICTION	143
10.8.1	Prediction by harmonic methods	143
10.9	TIDE – NON-HARMONIC PREDICTION	144
10.9.1	Prediction by non-harmonic methods	144
10.10	TIDE – TIME SERIES	145
10.10.1	Time series data	145
11	DEPTHS.....	147
11.1	GENERALISATION OF DEPTH PORTRAYAL	147
11.2	REPRESENTATION OF DEPTH: GENERAL	147
11.3	SOUNDING	148
11.3.1	Soundings (see S-4 – B-412 and B-413.1)	148
11.4	DREDGED AREA	150
11.4.1	Dredged areas (see S-4 – B-414)	151
11.5	SWEPT AREA	152
11.5.1	Swept areas (see S-4 – B-415)	152
11.6	UNSURVEYED AREA	154
11.6.1	Unsurveyed areas (see S-4 – B-418)	154
11.6.2	Inadequately surveyed areas (see S-4 – B-417)	154
11.7	DEPTH CONTOUR	155
11.7.1	Depth contours (see S-4 – B-404.2; B-410; B-411 to B-411.5; B-413 and B-413.1)	155
11.8	DEPTH AREA	157
11.8.1	Depth areas (see S-4 – B-410)	157
11.8.2	Geometry of depth areas	157
11.8.3	Use of attributes DRVAL1 and DRVAL2 for depth areas in general	158
11.8.4	Bathymetry in areas of minimal depiction of detail on paper charts	159
11.8.4.1	Areas of omitted bathymetry	159
11.8.4.2	Areas of very simplified bathymetry	160
12	NATURE OF THE SEABED.....	161
12.1	SEABED AREA	161

12.1.1	Description of the bottom (see S-4 – B-425 to B-427)	162
12.2	WEED/KELP	164
12.2.1	Weed - Kelp (see S-4 – B-428.2)	164
12.3	SANDWAVES	165
12.3.1	Sandwaves (see S-4 – B-428.1)	165
12.4	SPRINGS IN THE SEABED	167
12.4.1	Springs in the seabed (see S-4 – B-428.3)	167
13	ROCKS, WRECKS, OBSTRUCTIONS	168
13.1	DANGER LINE LIMITING AN AREA OF WRECKS OR OBSTRUCTIONS	168
13.2	DANGER LINE BORDERING AN AREA THROUGH WHICH NAVIGATION IS NOT SAFE (SEE S-4 – B-420.1)	168
13.3	DOUBTFUL DANGERS (SEE S-4 – B-424)	168
13.4	LAND AREA	169
13.4.1	Land area	169
13.4.2	Rocks which do not cover (islets) (see S-4 – B-421.1)	169
13.5	ROCKS (ALWAYS DRY/INTERTIDAL/AWASH/SUBMERGED)	171
13.5.1	Rocks which may cover (see S-4 – B-421.2 to B-421.4)	172
13.6	WRECKS	174
13.6.1	Wrecks (see S-4 – B-422, B-422.1 to B-422.8 and B-449.5)	175
13.6.1.1	Where a wreck is shown with its true shape (large scale ENCs) (see S-4 – B-422.1)	176
13.6.1.2	Changing criteria for wrecks	176
13.7	OBSTRUCTIONS	177
13.7.1	Obstructions and foul areas (see S-4 – B-327.5, B-420.1, B-422.8-9, B-431.6, B-445.1 and B-447.5)	179
13.8	FISHING FACILITY	181
13.8.1	Fishing facilities (see S-4 – B-447 and B-447.1-3)	181
13.9	MARINE FARM/CULTURE	183
13.9.1	Marine farms (see S-4 – B-447.4 and B-447.6)	184
14	OFFSHORE INSTALLATIONS	186
14.1	OFFSHORE PLATFORM	186
14.1.1	Offshore platforms (see S-4 – B-445.2, B-445.4 and B-445.5)	187
14.2	SUBMARINE CABLES	189
14.2.1	Submarine cables (see S-4 – B-443; B-443.1-2 and B-443.7-8)	190
14.3	SUBMARINE CABLE AREA	191
14.3.1	Submarine cable areas (see S-4 – B-439.3 and B-443.3)	192
14.4	SUBMARINE/LAND PIPELINES	193
14.4.1	Pipelines, submarine or on land (see S-4 – B-377; B-444; B-444.1-2; B-444.4-5 and B-444.7)	194
14.5	SUBMARINE PIPELINE AREA	196
14.5.1	Pipeline areas (see S-4 – B-439.3 and B-444.3)	197
14.6	OFFSHORE PRODUCTION AREA	198
14.6.1	Offshore production areas (see S-4 – B-445.3 and B-445.9)	199
15	TRACKS AND ROUTES	200
15.1	LEADING, CLEARING AND TRANSIT LINES AND RECOMMENDED TRACKS (SEE S-4 – B-433)	200
15.1.1	Range systems - relationship	200
15.2	TRAFFIC LANES	200
15.3	TRAFFIC SEPARATION SCHEME SYSTEMS	201
15.4	NAVIGATION LINE	202
15.4.1	Navigation lines (see S-4 – B-433)	202
15.4.2	Measured distances (see S-4 – B-458)	203
15.5	RECOMMENDED TRACK	204
15.5.1	Recommended tracks (see S-4 – B-432.1; B-434 and B-434.1-4)	204
15.6	FAIRWAYS	207
15.6.1	Fairways (see S-4 – B-432.1(c) and B-434.5)	208
15.7	RECOMMENDED ROUTES	209
15.7.1	Recommended routes (see S-4 – B-435.4)	209
15.8	TWO-WAY ROUTE PART	211

15.8.1	Two-way Routes (see S-4 – B-435.6)	212
15.9	RECOMMENDED DIRECTION OF TRAFFIC FLOW	213
15.9.1	Recommended traffic lane part (see S-4 – B-435.5)	213
15.10	TRAFFIC SEPARATION SCHEME LANE PART	214
15.10.1	Traffic separation scheme lanes (see S-4 – B-435.1)	215
15.11	TRAFFIC SEPARATION ZONE	216
15.11.1	Traffic separation zones (see S-4 – B-435.1 and B-436.3)	216
15.12	TRAFFIC SEPARATION SCHEME BOUNDARY	217
15.12.1	Traffic separation scheme boundaries (see S-4 – B-436)	217
15.13	PRECAUTIONARY AREA	218
15.13.1	Precautionary areas (see S-4 – B-435.2)	218
15.14	DEEP WATER ROUTE CENTRELINE	220
15.14.1	Deep Water routes centrelines (see S-4 – B-435.3)	221
15.15	DEEP WATER ROUTE PART	222
15.15.1	Deep Water route parts (see S-4 – B-435; B-435.3 and B-436.3)	223
15.16	TRAFFIC SEPARATION LINE	225
15.16.1	Traffic separation line (see S-4 – B-435.1 and B-436.3)	225
15.17	INSHORE TRAFFIC ZONE	226
15.17.1	Inshore traffic zones (see S-4 – B-435.1)	226
15.18	TRAFFIC SEPARATION SCHEME CROSSING	228
15.18.1	Traffic separation scheme crossing (see S-4 – B-435.1)	228
15.19	TRAFFIC SEPARATION SCHEME ROUNDABOUT	230
15.20	ARCHIPELAGIC SEA LANE	232
15.20.1	Archipelagic Sea Lane (see S-4 – B-435.10)	232
15.21	ARCHIPELAGIC SEA LANE AXIS	234
15.21.1	Archipelagic Sea Lane Axis (see S-4 – B-435.10)	234
15.22	RADIO CALLING-IN POINT	235
15.22.1	Radio calling-in (reporting) points (see S-4 – B-488.1 and B-488.2)	235
15.23	FERRY ROUTE	237
15.23.1	Ferries (see S-4 – B-438)	237
15.24	RADAR LINE	238
15.24.1	Radar reference lines (see S-4 – B-487.2)	238
15.25	RADAR RANGE	239
15.25.1	Radar ranges (see S-4 – B-487.1)	239
15.26	RADAR STATION	240
15.26.1	Radar station (see S-4 – B-485.1 and B-487.3)	240
16	AREAS, LIMITS	241
16.1	INTERNATIONAL BOUNDARIES AND NATIONAL LIMITS (SEE S-4 – B-440)	241
16.2	ANCHORAGE AREA	242
16.2.1	Anchorage (see S-4 – B-431.1; B-431.3 and B-431.7)	243
16.3	ANCHOR BERTH	244
16.3.1	Anchor berths (see S-4 – B-431.2)	244
16.4	SEAPLANE LANDING AREA	246
16.4.1	Seaplane landing areas (see S-4 – B-449.6)	246
16.5	DUMPING GROUND	248
16.5.1	Dumping grounds (see S-4 – B-442; B-446 and B-446.1)	249
16.6	MILITARY PRACTICE AREA	250
16.6.1	Military practice areas (see S-4 – B-441.1-6)	251
16.7	ADMINISTRATION AREA (NAMED)	252
16.7.1	International and national territories (see S-4 – B-440.1 and B-440.3)	252
16.8	CARGO TRANSHIPMENT AREA	253
16.8.1	Cargo transshipment areas (see S-4 – B-449.4)	253
16.9	CAUTION AREA	254
16.9.1	Caution areas (see S-4 – B-242)	254
16.10	CONTIGUOUS ZONE	255
16.10.1	Contiguous zones (see S-4 – B-440.6)	255
16.11	CONTINENTAL SHELF AREA	256

16.11.1	Continental Shelf (see S-4 – B-440.8)	256
16.12	CUSTOM ZONE	257
16.12.1	Custom Zones (see S-4 – B-440.2)	257
16.13	EXCLUSIVE ECONOMIC ZONE	258
16.13.1	Exclusive Economic Zones (see S-4 – B-440.9)	258
16.14	FISHERY ZONE	259
16.14.1	Fishery zones (see S-4 – B-440.7)	259
16.15	FISHING GROUND	260
16.15.1	Fishing grounds	261
16.16	FREE PORT AREA	262
16.16.1	Free port areas	262
16.17	HARBOUR AREA (ADMINISTRATIVE)	263
16.17.1	Administrative harbour areas (see S-4 – B-430.1)	263
16.18	INCINERATION AREA	264
16.18.1	Incineration areas (see S-4 – B-449.3)	264

1 Overview

1.1 Preface

The “Data Classification and Encoding Guide” has been developed to provide consistent, standardized instructions for encoding S-100 compliant ENC data. This document has been laid out, as far as possible, along the lines of the IHO publication S-4, Part B “Chart Specifications of the IHO – Medium and Large-Scale National and International (INT) Charts”.

Comment [j1]: Is TSMAD happy to retain this order?

The purpose of the Data Classification and Encoding Guide is to facilitate S-101 encoding to meet IHO standards for the proper display of ENC in an ECDIS. The document describes how to encode information that the cartographer considers relevant to an ENC. The content of an ENC is at the discretion of the producing authority provided that the conventions described within this document are followed. A “producing authority” is a Hydrographic Office (HO) or an organization authorized by a government, HO or other relevant government institution to produce ENCs.

Comment [j2]: S-57 Appendix B.1 Annex A contains a statement about conformance with a particular version of the Product Specification. Is such a statement required, or is a new version of the PS going to be published as Appendix A is amended?

The entire S-100 Standard, including the S-101 Product Specification, is available at the following web site, <http://www.iho.int>.

1.2 S-101 Appendix A; Data Classification and Encoding Guide - Metadata

Note: This information uniquely identifies this Appendix to the Product Specification and provides information about its creation and maintenance.

Title: The International Hydrographic Organization Electronic Navigation Chart Product Specification, Appendix A – Data Classification and Encoding Guide

Version: 0.0.1

Date: April 2010

Language: English

Classification: Unclassified

Contact: International Hydrographic Bureau
Antione 1 er
B.P. 445
MC 98011 MONACO CEDEX
Telephone: +377 93 10 81 00
Fax: +377 93 10 81 40

URL: www.iho.int

Identifier: S-101 Appendix A

Maintenance: Changes to S-101 Appendix A Data Classification and Encoding Guide are coordinated by the IHO Transfer Standards Maintenance and Applications Development Working Group (TSMAD) and must be made available via the IHO web site.

Comment [j3]: S-101 contains a reference to an unknown Annex here. Is this required for this document?

1.3 Terms, definitions and abbreviations

1.3.1 Terms and definitions

aggregation

special form of association that specifies a whole-part relationship between the aggregate (whole) and a component (see composition)

attribute

named property of an entity

NOTE: Describes the geometrical, topological, thematic, or other characteristic of an entity

curve

1-dimensional **geometric primitive**, representing the continuous image of a line

NOTE: The **boundary** of a **curve** is the **set of points** at either end of the **curve**. If the curve is a cycle, the two ends are identical, and the curve (if topologically closed) is considered to not have a boundary. The first **point** is called the **start point**, and the last is the **end point**. Connectivity of the curve is guaranteed by the “continuous image of a line”.

Comment [j4]: Example only. Terms and definitions to be determined later on.

feature

Abstraction of real world phenomena

NOTE: A feature may occur as a type or an instance. Feature type or feature instance should be used when only one is meant

EXAMPLE: The phenomenon named “Eiffel Tower” may be classified with other phenomena into a feature type “tower”

geometric primitive

geometric object representing a single, connected, homogeneous element of geometry

NOTE: Geometric primitives are non-decomposed objects that present information about geometric configuration. They include **points**, **curves**, surfaces and solids

point

0-dimensional geometric primitive, representing a position

NOTE: The **boundary** of a point is the empty set

1.3.2 Abbreviations

ENC Electronic Navigational Chart

IHO International Hydrographic Organization

SENC System Electronic Navigational Chart

TSMAD Transfer Standards Maintenance and Applications Development Working Group

Comment [j5]: Examples only. Complete list of abbreviations to be determined later on.

1.4 Use of language

Within this document:

“Must” indicates a mandatory requirement;

“Should” indicates an optional requirement, that is the recommended process to be followed, but is not mandatory;

“May” means “allowed to” or “could possibly”, and is not mandatory.

Comment [j6]: Is this section required? Do TSMAD approve this strength of wording statement?

1.5 Maintenance

1.5.1 Maintenance procedures

Changes to the Data Classification and Encoding Guide are coordinated by Transfer Standards Maintenance and Applications Development Working Group (TSMAD). Individuals that wish to make changes to the Data Classification and Encoding Guide must address their comments to the TSMAD.

There are three change proposal types to the Data Classification and Encoding Guide. They are:

- (1) Clarification;
- (2) Correction; and
- (3) Extension.

Any change proposal must be one of these types.

ALL proposed changes must be technically assessed before approval. All proposals must be submitted using S-101 Appendix A Maintenance – Change Proposal Form. See Annex A.

Approved changes must be issued and entered on the Document Control page of this document.

Comment [j7]: See comment in 1.1 above. Is this section required? Is this document going to be maintained as stand-alone (as the UOC was) or as part of overall PS maintenance?

1.5.1.1 Clarification

Clarifications are defined as non-substantive changes to the Data Classification and Encoding Guide. Clarifications remove ambiguity and errors in spelling, punctuation and grammar. A clarification must not cause any substantive semantic change. A clarification must not also be classified as a correction. All clarifications must be available for immediate use when approved by the TSMAD.

1.5.1.2 Correction

Corrections are defined as substantive semantic changes to the Data Classification and Encoding Guide to correct factual errors. A correction must not also be classified as a clarification. One correction may result in multiple related actions. All cumulative clarifications must be included with the release of approved corrections. After approval the correction will be available for use at a date specified by the TSMAD.

1.5.1.3 Extension

Extensions are significant changes to the Data Classification and Encoding Guide. They can include additional information from the TSMAD or related committees that were not originally included in the Data Classification and Encoding Guide that may be needed for additional applications. Extensions result in a new major version of the Data Classification and Encoding Guide. One extension may result in multiple related actions. All cumulative clarifications and corrections must be included with the release of approved extensions. After approval the extension will be available for use at a date specified by the TSMAD.

1.5.2 Version control

The TSMAD must release new versions of the Data Classification and Encoding Guide as necessary. New versions must include clarifications, corrections and extensions. Each version must contain a change list that identifies the changes between versions of the Data Classification and Encoding Guide.

1.5.2.1 Clarification version control

Clarifications must be denoted as 0.0.x. Each clarification or set of clarifications approved at a single point in time must increment x by 1.

1.5.2.2 Correction version control

Corrections must be denoted as 0.x.0. Each correction or set of corrections approved at a single point in time must increment x by 1. Correction version control will set clarification version control to 0.

1.5.2.3 Extension version control

Extensions must be denoted as x.0.0. Each extension or set of extensions approved at a single point in time must increment x by 1. Extension version control will set the clarification and correction version control to 0.

2 General

The S-101 Data Classification and Encoding Guide is designed to permit the transfer of data describing the real world. The real world is far too complex for a complete description to be practical; therefore a simplified, highly specific, view of the real world must be used. Th No. S-57, Edition 3.1, November 2000 "IHO Transfer Standard for Digital Hydrographic Data" within several annexes and appendices.

The IHO S-57 Standard is organized in three parts. They are:

Part 1: Introduction.

Part 2: Theoretical data model on which is achieved by modeling the reality. Detailed information is available in IHO Special Publication which the standard is based.

Part 3: Defines Data Structure/format that is used in implement and encoding rules.

Appendix A: The Object Catalog

Appendix B: IHO approved Product Specifications

Comment [j8]: Should this be a description of the S-100 Standard?

This standard is specifically concerned with those entities in the real world that are of relevance to hydrography. This hydrographic regime is considered to be geo-spatial. As a result, the model defines real world entities as a combination of descriptive and spatial characteristics. Within the model these sets of characteristics are defined in terms of feature, spatial and information types. A type is defined as a **stereotype of class that is used to specify a domain of instances (objects) together with the operations applicable to the objects**. A type may have attributes and may be related to other types.

2.1 Feature types

Feature types contain descriptive attributes and do not contain any geometry (i.e. information about the shape and position of a real world entity). Spatial types may have descriptive attributes and must contain geometry.

A feature instance is located by a relationship to one or more spatial instances. A feature instance may exist without referencing a spatial instance, but each spatial instance must be referenced by a feature instance.

To facilitate the efficient exchange of the non-locational description of real world entities, this model defines the following feature types:

Meta feature type - contains information about other features.

Cartographic Feature type - contains information about the cartographic representation (including text) of real world entities.

Geographic (Geo) feature type - carries the descriptive characteristics of a real world entity.

Aggregated feature type – are features that are made up of componenet features.

Theme feature type – contains a collection of thematically grouped features. An example of a theme feature type is the Skin Of The Earth theme.

2.2 Spatial types

Spatial types may have descriptive attributes and must contain geometry. Allowable geometric primitives are point (P), line (L) and area (A).

Comment [j9]: Should this be line or curve? Result may effect Table below.

Each spatial feature instance must be referenced by another feature type instance.

The allowable geometric primitive for each feature type is defined in the Feature Catalogue. Within this document, allowable primitives are included in the description of each feature type. For easy reference, Table 2.1 below summarises the allowable geometric primitive for each feature type:

Comment [j14]: This is not a section in the Product Specification – should it be? This section needs to be expanded.

Comment [j12]: Extension 6/01

Comment [j13]: Extension 6/01

Table 2.1 Objects permitted for ENC and their geometric primitives

It is recommended that linear spatial features (curves and curves forming area boundaries) should not be encoded at a point density greater than 0.3mm at the optimum intended display scale for the data.

Linear geometry between two explicit coordinates is defined as a loxodromic line on WGS84. Long lines may need to have additional explicit coordinates inserted to cater for the effects of projection change.

The presentation of symbolized lines may be affected by line length. Therefore, the encoder must be aware that splitting a line into numerous small edges may result in poor symbolization.

2.3 Information types

An information type is an identifiable object that can be associated with features in order to carry information particular to the associated features. An example of an information type might be a Chart Note. Information types can also be associated with each other. This could be done where there is further supplementary information that is relevant to the information type or where there is a need to translate the information. For example a primary information object carrying a Chart Note may contain text in English and an associated supplementary information object may carry the same text in German.

The characteristics of information types must be carried by thematic attribute types only.

Comment [j15]: Taken from S-100 Part 3. This is different to the wording in the PS, but same meaning.

2.4 Attributes

Attributes may be of type Enumerated (E), List (L), Float (F), Integer (I), Coded String (A), Free Text (S) or Complex (C) (see clause 2.4.1).

Floating point or integer attribute values must not be padded by non-significant zeroes. For example, for a signal period of 2.5 seconds, the value populated for the attribute SIGPER must be 2.5 and not 02.50.

Comment [j16]: Float or Real?

Comment [j17]: Will this do for an abbreviation?

Comment [j18]: What about Date and Time? Are these just a part of Coded String? Are all the attribute types going to be described in the Product Specification?

The binding of attributes to feature types is defined in the Feature Catalogue. Within this document, the allowable list of attributes is included in the description of each feature type. A full description of the attributes that define the feature, as well as the allowable values that may be populated for that attribute, are also included in the feature description. For attributes that may be associated with all feature types, see clause 2.4.4.

Where the value of a non-mandatory attribute is not known, the attribute should not be populated (i.e. not included in the data set).

A full description of all attributes allowable for ENC, and associated enumerates where applicable, can be found in Section X of this document.

2.4.1 Attribute types

Each attribute is assigned to one of **[X]** types:

- E Enumerated. The expected input is a number selected from a list of pre-defined attribute values. Exactly one value must be chosen.
- L List. The expected input is a list of one or more numbers selected from a list of pre-defined attribute values. Where more than one value is used, they must normally be separated by commas but in special cases slashes ("/") may be used.

Note: In some cases, dependency exists between different attributes of a given feature e.g. a bridge (**BRIDGE**) may have the values 'concreted' and 'iron/steel' for the attribute NATCON (Nature of Construction) and the values 'red' and 'green' for the attribute COLOUR. Even if it is known that the concreted part of the bridge is red and the iron/steel part is green, the Feature Catalogue provides no means of indicating this relationship. However, such relationships may be formalized for a given application in which case the relationship must be described in the appropriate Product Specification (see S-57 Appendix B).
- F Float. The expected input is a floating point numeric value with defined range, resolution, units and format.
- I Integer. The expected input is an integer numeric value with defined range, units and format.
- A Coded String. The expected input is a string of ASCII characters in a predefined format.
- S Free text. The expected input is a free-format alphanumeric string. It may be a file name which points to a text or graphic file.
- C Complex: The expected input is the values populated for a pre-defined list of sub-attributes. Sub-attributes may be any of the above attribute types.

Comment [j19]: ??? Or should sub-attributes also be inserted as a type of attribute?

2.4.2 Mandatory attributes

Within this document, mandatory attributes ((M) or (m)) are identified in the description of each feature type. For easy reference, Table 2.2 below summarises the mandatory attributes for each feature type:

Object Class	Attributes						
ADMARE	JRSDTN

1.Co.23 and 1.Cl.30

Table 2.2 Mandatory attributes

NOTE 1: Compilers should refer to Table 2.2 above when determining the attributes considered to be mandatory for any feature being encoded. In the Tables below describing each feature and its attributes, mandatory attributes are identified with (M), while “conditional” mandatory attributes are identified with (m). “Conditional” mandatory attributes are indicated in Table 2.2 above by the following additional text:

over navigable water for **BRIDGE, CBLOHD, CONVYR, PIPOHD**

at least one of for **CTNARE, LNDRGN, OBSTRN, RESARE, SBDARE, SEAARE, WRECKS**

if navigable at.... for **GATCON**

if it is..... for **LIGHTS**

if under water for **MARCUL**

except when..... for **TSSLPT**

..... or for **M_NSYS**

Compilers must consider these conditional circumstances when encoding features for ENC, as well as any additional information given in the object class descriptions in this document. For example, when encoding a **SBDARE**, the mandatory attributes are *at least one of* NATSUR or NATQUA – if NATSUR is known and NATQUA is not known, then NATQUA must not be populated with an empty (null) value, as it is not mandatory in this case.

NOTE 2: The attribute COLPAT is mandatory for any feature (except LIGHTS) that has more than one value populated for the attribute COLOUR.

Comment [j25]: AU S-57
Encoding Guide

2.4.3 Missing attribute values

In a base data set (EN application profile), when an attribute code is present but the attribute value is missing, it means that the producer wishes to indicate that this attribute value is unknown.

In a revision data set (ER application profile), when an attribute code is present but the attribute value is missing it means:

- that the value of this attribute is to be replaced by an unknown value if it was present in the original data set, or
- that an unknown value is to be inserted if the attribute was not present in the original data set.

2.4.4 Textual information

The attributes INFORM, NINFOM, TXTDSC and NTXTDS must not be used when it is possible to encode the information by means of any other attribute.

INFORM and NINFOM contain information as text, whereas TXTDSC and NTXTDS encode the name of an external file.

The text contained in INFORM and NINFOM is ASCII text. Formatting characters (C0 as defined in S-57 Part 3, Annex B) are prohibited. INFORM and NINFOM should generally be used for short notes (e.g. caution notes from paper charts), or to transfer information which cannot be encoded by other attributes, or to give more detailed information about a feature.

The text files referenced by TXTDSC and NTXTDS must be ASCII files, and may contain formatted text. These files should generally be used for longer texts (e.g. longer chart notes, tables or paragraphs from nautical publications). It is up to the producing authority to determine the most suitable means of encoding a particular piece of text.

2.4.5 Spatial attributes

Some attributes qualify the location of an object, as opposed to defining the characteristics of the individual object itself.

Attributes specifying the accuracy and quality of a position (x,y - coordinates) and the reference datum for horizontal measurement are considered to be attributes of spatial objects.

Within a data set encoded according to S-57, the attributes of spatial objects are held in the Spatial Record Attribute field (refer to S-57 Part 3).

2.5 Description of table format for S-101 meta and geo features

* S-101 Attribute: This column does not show the full list of allowable attributes for the feature. Attributes included in this column include all Enumerated (E) and List (L) attributes allowable for the feature, and any other specific defining attributes for the feature.

** For (E) and (L) type attributes, the enumerates listed are only those allowable for the particular occurrence of the attribute relevant to the feature. Allowable values may vary for the attribute depending on the feature to which the attribute is bound. Such bindings are defined in the S-101 Feature Catalogue. The full list of enumerates that may be assigned to an attribute can be found in the relevant IHO Register.

3 ENC Metadata

The maximum use must be made of meta features to reduce the attribution on individual objects. In a base data set (EN Application profile, [see clause X.X](#)), some meta features are mandatory.

These meta features are in the following list:

M_COVR: The meta feature **M_COVR** must provide an exhaustive, non-overlapping coverage of the whole cell. See clause [X.X](#).

M_NSYS: The meta feature **M_NSYS**, with the attribute MARSYS (to indicate the system of navigational marks), must provide an exhaustive non-overlapping coverage of the part of the cell containing data. However, other **M_NSYS** features with the attribute ORIENT (to indicate a local direction of buoyage) may overlap these objects. See clause [X.X](#).

M_QUAL: The meta feature **M_QUAL** defines areas within which uniform assessment exists for the quality of bathymetric data, and is used to provide an assessment of the overall quality of bathymetric data to the mariner. Areas of a cell containing depth data or bathymetry must be covered by one or more **M_QUAL** features, which must not overlap. See clause [X.X](#).

3.1 Accuracy of data

IHO Definition: ACCURACY OF DATA. An area within which the best estimate of the overall accuracy of the data is uniform. The overall accuracy takes into account for example the source accuracy, chart scale, digitising accuracy etc. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.208, November 2000).

Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	M_ACCY (A)	POSACC (M) Positional accuracy		F
<i>Paper Chart Symbol</i>				
<i>ECDIS Symbol</i>				

INT 1 Reference:

3.1.1 Accuracy of non-bathymetric data

The meta **feature M_ACCY** may be used to provide an overall accuracy of position for all non-bathymetric features. *It must not be used to provide the accuracy of bathymetric information.*

Meta **feature:** Accuracy of data (**M_ACCY**)

Attributes: **POSACC** INFORM NINFOM NTXTDS TXTDSC RECDAT
RECIND SORDAT SORIND

The attributes QUAPOS and POSACC may be applied to any spatial **feature**, in order to qualify the location of a **feature**.

QUAPOS and POSACC must not be applied to the spatial **feature** of any geo **feature** if they are identical to the QUAPOS and POSACC values of the underlying meta object.

QUAPOS gives qualitative information, whereas POSACC gives quantitative information.

POSACC on the **M_ACCY** applies to non-bathymetric data situated within the area, while QUAPOS or POSACC on the associated spatial **features**, qualifies the location of the **M_ACCY feature** itself.

Meta **features M_ACCY** and **M_QUAL** should not overlap.

Remarks:

Distinction: Quality of data; survey reliability.

3.2 Compilation scale of data

IHO Definition: COMPILATION SCALE OF DATA. An area within which the data was originally compiled at a uniform scale. For example, it may define the scale of the paper chart from which the data was digitised. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.209, November 2000).				
Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	M_CSCL (A)	CSCALE (M) Compilation scale		I
<i>Paper Chart Symbol</i>				
<i>ECDIS Symbol</i>				
<p>INT 1 Reference:</p> <p>3.2.1 Compilation scale</p> <p>The default value for the entire data set must be given in the “Compilation Scale of Data” [CSCL] subfield of the “Data Set Parameter” [DSPM] field. The default value should be the compilation scale appropriate to the greater part of the data in the cell.</p> <p>If the compilation scale for an area is different to the value given in the CSCL subfield for the data set, it must be encoded using the meta object M_CSCL. The areas covered by these meta objects must not overlap.</p> <p>Meta feature: Compilation scale of data (M_CSCL)</p> <p>Attributes: CSCALE INFORM NINFOM NTXTDS TXTDSC RECDAT RECIND SORDAT SORIND</p> <p>Remarks:</p> <ul style="list-style-type: none"> The compilation scale provides the reference value for the overscale indication on an ECDIS. <p>Distinction:</p>				

3.3 Coverage

IHO Definition: **COVERAGE.** A geographical area that describes the coverage and extent of spatial objects. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.210, November 2000).

Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	M_COVR (A)	CATCOV (M) Category of coverage	1 : coverage available 2 : no coverage available	E
<i>Paper Chart Symbol</i>				
<i>ECDIS Symbol</i>				

INT 1 Reference:

3.3.1 Coverage

Meta **feature:** Coverage (**M_COVR**)

Attributes: CATCOV INFORM NINFOM RECDAT RECIND SORDAT
SORIND

Remarks:

- This **meta feature** is intended to support an indication of coverage.

Distinction:

3.4 Horizontal datum shift parameters

IHO Definition: **HORIZONTAL DATUM SHIFT PARAMETERS.** An area within which a uniform shift exists between a specific geodetic datum and the datum of the data within this area. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.212 November 2000).

		SHIPAM (M) Shift parameters		A

INT 1 Reference:**3.4.1 Horizontal datum**

The horizontal datum must be unique in a data set and must be WGS84. It must be encoded in the "Horizontal Geodetic Datum" [HDAT] subfield of the "Data Set Parameter" [DSPM] field.

The meta **feature** **M_HOPA** may be used to provide the shift from another horizontal datum to WGS84 (see **S-101** ENC Product Specification clause **X.X**).

Meta **feature**: Horizontal Datum (**M_HOPA**)

Attributes: **HORDAT** - contain the original horizontal datum of the data
SHIPAM INFORM NINFOM NTXTDS SCAMIN TXTDSC
RECDAT RECIND SORDAT SORIND

Where data has been transformed to WGS84 from another datum, the producing authority may wish to

indicate the accuracy of the transformation. If so, it must be done using the attribute INFORM on the meta feature **M_QUAL**.

Remarks:

Distinction:

3.5 Nautical publication information

<u>IHO Definition:</u> NAUTICAL PUBLICATION INFORMATION. Used to relate additional nautical information or publications to the data. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.213, November 2000).				
Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	M_NPUB (P, A)	PICREP (O) Pictorial representation		S
<i>Paper Chart Symbol</i>		PUBREF (O) Publication reference		S
<i>ECDIS Symbol</i>		TXTDSC (O) Textual description		S

INT 1 Reference:

3.5.1 Reference to other publications

If it is required to encode a reference to other nautical information or publications, it must be done using the meta feature **M_NPUB**.

Meta feature: Coverage (**M_NPUB**)

Attributes: INFORM NINFOM NTXTDS PICREP PUBREF TXTDSC
 RECDAT RECIND SORDAT SORIND

Remarks:

- References to nautical publications in **M_NPUB**, must be encoded using the attribute PUBREF, and references to external picture files must be encoded using the attribute PICREP.

Distinction:

3.6 Navigational system of marks

IHO Definition: **NAVIGATIONAL SYATEM OF MARKS.** An area within which a specific system of navigational marks applies and/or a common direction of buoyage. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.214, November 2000).

Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	M_NSYS (A)	MARSYS (m) Marks navigational – System of	1 : IALA A 2 : IALA B 9 : no system 10 : other system	E
<i>Paper Chart Symbol</i>		ORIENT (m) Orientation		F
<i>ECDIS Symbol</i>				

INT 1 Reference:

3.6.1 Buoyage systems and direction of buoyage (see S-4 – B-461)

The buoyage system of the data set and, where necessary, the direction of buoyage, must be encoded using the meta **feature M_NSYS**:

Meta **feature:** Navigational system of marks (**M_NSYS**)

Attributes: **MARSYS** **ORIENT** **INFORM** **NINFOM** **NTXTDS** **SCAMIN**
TXTDSC **RECDAT** **RECIND** **SORDAT** **SORIND**

All parts of the data set containing data must be covered by **M_NSYS features**, with the attribute MARSYS indicating the buoyage system in operation. **M_NSYS** with a value encoded for MARSYS must not overlap.

In the following table the symbol '/' indicates that this attribute is not relevant for that particular **feature**. The table contains the most common examples of coding; other coding combinations are possible. For encoding of buoys, substitute **BOY** for **BCN** in **Feature**.

Real World Feature	INT 1	Feature	CATCAM	COLOUR	COLPAT	MARSYS
North cardinal beacon	IQ 130.3	BCNCAR	1	2,6	1	1 and 2 (IALA A and B)
East cardinal beacon	IQ 130.3	BCNCAR	2	2,6,2	1	1 and 2 (IALA A and B)
South cardinal beacon	IQ 130.3	BCNCAR	3	6,2	1	1 and 2 (IALA A and B)
West cardinal beacon	IQ 130.3	BCNCAR	4	6,2,6	1	1 and 2 (IALA A and B)
Isolated danger beacon	IQ 130.4	BCNISD	/	2,3,2	1	1 and 2 (IALA A and B)

Starboard lateral beacon	IQ 130.1	BCNLAT	2	4	/	1 (IALA A)
Preferred channel to starboard lateral beacon	IQ 130.1	BCNLAT	3	3,4,3	1	1 (IALA A)
Preferred channel to port lateral beacon	IQ130.1	BCNLAT	4	4,3,4	1	1 (IALA A)

Port lateral beacon	IQ130.1	BCNLAT	1	4	/	2 (IALA B)
Starboard lateral beacon	IQ130.1	BCNLAT	2	3	/	2 (IALA B)
Preferred channel to starboard lateral beacon	IQ130.1	BCNLAT	3	4,3,4	1	2 (IALA B)
Preferred channel to port lateral beacon	IQ130.1	BCNLAT	4	3,4,3	1	2 (IALA B)
Safe water beacon	IQ130.5	BCNSAW	/	3,1 or 1,3	2	1 and 2 (IALA A and B)
Special purpose beacon	IQ130.6	BCNSPP	/	6	/	1 and 2 (IALA A and B)
North cardinal topmark	IQ 130.3	TOPMAR	13	2	/	1 and 2 (IALA A and B)
East cardinal topmark	IQ 130.3	TOPMAR	11	2	/	1 and 2 (IALA A and B)
South cardinal topmark	IQ 130.3	TOPMAR	14	2	/	1 and 2 (IALA A and B)
West cardinal topmark	IQ 130.3	TOPMAR	10	2	/	1 and 2 (IALA A and B)
Isolated danger topmark	IQ130.4	TOPMAR	4	2	/	1 and 2 (IALA A and B)
Port lateral topmark	IQ130.1	TOPMAR	5	3	/	1 (IALA A)
Starboard lateral topmark	IQ130.1	TOPMAR	1	4	/	1 (IALA A)
Port lateral topmark	IQ130.1	TOPMAR	5	4	/	2 (IALA B)
Starboard lateral topmark	IQ130.1	TOPMAR	1	3	/	2 (IALA B)
Safe water topmark	IQ130.1	TOPMAR	3	3	2	1 and 2 (IALA A and B)
Special purpose topmark	IQ130.1	TOPMAR	7	6	/	1 and 2 (IALA A and B)

Within a data set, there may be some areas where the direction of buoyage is defined by local rules and must, therefore, be specified. These areas should be encoded as separate **M_NSYS** area **features**, with the attribute ORIENT indicating the direction of buoyage (MARSYS must not be encoded for these features). **M_NSYS features** with a value encoded for ORIENT must not overlap, but in areas where local buoyage directions apply, **M_NSYS** with a value encoded for ORIENT may overlap **M_NSYS** with a value encoded for MARSYS (see Figure below).

Individual buoys and beacons may not be part of the general buoyage system. This should be encoded using MARSYS on these buoy and beacon objects.

3.7 Quality of bathymetric data

IHO Definition: **QUALITY OF BATHYMETRIC DATA.** An area within which a uniform assessment of the quality of the bathymetric data exists. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.216, November 2000).

Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
Real World Paper Chart Symbol ECDIS Symbol	M_QUAL (A)	CATZOC (M) Category of zone of confidence in data	1 : zone of confidence A1 2 : zone of confidence A2 3 : zone of confidence B 4 : zone of confidence C 5 : zone of confidence D 6 : zone of confidence U (data not assessed)	E

INT 1 Reference:

3.7.1 Quality, reliability and accuracy of bathymetric data (see S-4 – B-297)

Information about quality, reliability and accuracy of bathymetric data is given using:

- the meta feature **M_QUAL** for an assessment of the quality of bathymetric data;
- the meta feature **M_SREL** for additional information about the survey;
- the attributes QUASOU, SOUACC and TECSOU on groups of soundings or individual features;
- the attributes POSACC and QUAPOS on the spatial features (see clause X.X).

For the mariner, **M_QUAL** provides the most useful information. Therefore, the use of **M_QUAL** is mandatory for areas containing depth data or bathymetry.

More detailed information about a survey may be given using **M_SREL** (see clause X.X). For example, in incompletely surveyed areas, lines of passage soundings may be indicated as such using a linear **M_SREL** feature. This information is more difficult for the mariner to interpret. Therefore, the use of **M_SREL** is optional.

For individual features (wrecks, obstructions etc), or small groups of soundings, QUASOU, SOUACC and TECSOU may be used to provide additional information about quality and accuracy.

The meta feature **M_QUAL** defines areas within which uniform assessment exists for the quality of bathymetric data, and must be used to provide an assessment of the overall quality of bathymetric data to the mariner. Areas of a cell containing depth data or bathymetry must be covered by one or more **M_QUAL**, which must not overlap.

Meta feature: Quality of data (**M_QUAL**)

Attributes: **CATZOC** DRVAL1
DRVAL2 - the maximum depth to which the quality information applies
POSACC SOUACC SURSTA SUREND TECSOU INFORM
NINFOM NTXTDS TXTDSC RECDAT RECIND SORDAT
SORIND

Remarks:

- Where **M_QUAL** areas are encoded over land, CATZOC should be set to 6 (unassessed).
- A CATZOC category indicates that the depths encoded within a **M_QUAL** area meet the minimum criteria described in the CATZOC definition table. A CATZOC category may be further sub-divided by specifying depth and positional accuracy, and sounding technique, using the attributes POSACC, SOUACC and TECSOU, within separate **M_QUAL** areas.
- DRVAL1 must **only** be used on a **M_QUAL** feature where a swept area occupies the entire **M_QUAL** area.
- DRVAL2 must **only** be used on a **M_QUAL** feature to specify the maximum depth to which the CATZOC category applies. When DRVAL2 is specified, the CATZOC category applies only to depths equal to or

shoaler than DRVAL2. No quality information is provided for depths deeper than DRVAL2.

- POSACC must **only** be used on a **M_QUAL feature** to specify a higher positional accuracy of the depths than the CATZOC category indicates. When DRVAL1 is specified, POSACC must not be used - there is no positional accuracy information provided for any underlying depths in this circumstance.
- SOUACC must **only** be used on a **M_QUAL feature** to specify a higher accuracy of the depths than the CATZOC category indicates. When DRVAL1 is specified, SOUACC refers only to the accuracy of the swept depth defined by DRVAL1 - there is no depth accuracy information provided for any underlying depths in this circumstance.
- When the **M_QUAL** area contains soundings of two or more different techniques, the attribute TECSOU must not be used.
- When the **M_QUAL** area contains data from only one survey, the date of survey, if required, must be specified using the attribute SUREND. When the **M_QUAL** area contains data from two or more surveys, the date of the oldest survey, if required, must be specified using the attribute SURSTA, and the date of the most recent survey, if required, must be specified using SUREND.
- Additional quality information may be given using the meta **feature M_SREL**.
- When **M_QUAL** and the meta **feature M_ACCY** are encoded in a cell, they should not overlap. When both **M_QUAL** and **M_ACCY features** are used in a cell, the area covered by these **features** should equal the area of data coverage for the cell.
- POSACC on the **M_QUAL** applies to bathymetric data situated within the area, while QUAPOS or POSACC on the associated spatial **features**, qualifies the location of the **M_QUAL feature** itself.

Distinction: Accuracy of data; survey reliability.

3.8 Sounding datum

IHO Definition: **SOUNDING DATUM.** An area of uniform sounding datum. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.217, November 2000).

Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i> <i>Paper Chart Symbol</i> <i>ECDIS Symbol</i>	M_SDAT (A)	VERDAT (M) Vertical datum	1 : Mean low water spring 2 : Mean lower low water springs 3 : Mean sea level 4 : Lowest low water 5 : Mean low water 6 : Lowest low water springs 7 : Approximate mean low water springs 8 : Indian spring low water 9 : Low water springs 10 : Approximate lowest astronomical tide 11 : Nearly lowest low water 12 : Mean lower low water 13 : Low water 14 : Approximate mean low water 15 : Approximate mean lower low water 16 : Mean high water 17 : Mean high water springs 18 : High water 19 : Approximate mean sea level 20 : High water springs 21 : Mean higher high water 22 : Equinoctial spring low water 23 : Lowest astronomical tide 24 : Local datum 25 : International great lakes datum 1985 26 : Mean water level 27 : Lower low water large tide 28 : Higher high water large tide 29 : Nearly highest high water 30 : Highest astronomical tide (HAT)	E

INT 1 Reference:

3.8.1 Sounding datum

Sounding datum information is encoded in the **data set metadata** or by the meta **feature M_SDAT**, and must be constant over large areas. The values encoded in the attributes VALSOU, DRVAL1, DRVAL2 and VALDCO, and the sounding values encoded in **SOUNDG features (positive values down)**, are referenced to this datum.

The default value for the entire data set must be given in the "Vertical Datum" [VDAT] subfield of the "Data Set Parameter" [DSPM] field.

If the sounding datum for an area is different to the value given in the **SDAT subfield** for the data set, it must

be encoded using **M_SDAT**. The areas covered by these meta features must not overlap.

Meta feature: Sounding datum (**M_SDAT**)

Attributes: VERDAT INFORM NINFOM NTXTDS TXTDSC RECDAT
RECIND SORDAT SORIND

Depth contours and depth areas going across areas having different values of sounding datum must be split at the border of those areas. Other features that should be split include **MARCUL**, **OBSTRN** and **WRECKS**, but only where the value of VALSOU is known; and **BERTHS**, **CBLSUB**, **DWRTCL**, **DWRTPT**, **DRGARE**, **DRYDOC**, **FAIRWY**, **FLODOC**, **GATCON**, **PIPSOL**, **RCRTCL**, **RECTRC**, **SWPARE**, **TWRTPT** and **M_QUAL**, but only if the value of DRVAL1 and/or DRVAL2 is known.

Remarks:

Distinction: Vertical datum.

Comment [j26]: These clauses need to be sorted out in regard to how vertical and sounding datums are going to work in S-101.

3.9 Survey reliability

IHO Definition: SURVEY RELIABILITY. An area within which a uniform assessment of the reliability of source survey information exists. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.218, November 2000).

Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

<p><u>INT 1 Reference:</u></p> <p>3.9.1 Survey reliability</p> <p>The survey reliability may be encoded using the meta feature M_SREL.</p> <p>Meta feature: Coverage (M_SREL)</p> <p>Attributes: QUAPOS QUASOU SCVAL1 SCVAL2 SDISMX SDISMN SURATH SUREND SURSTA SURTYP INFORM NINFOM NTXTDS TXTDSC RECDAT RECIND SORDAT SORIND</p> <p><u>Remarks:</u></p> <ul style="list-style-type: none"> • If the attributes SOUACC and TECSOU are required, they must be encoded on either the meta feature M_QUAL or on individual geo features (e.g. SOUNDG). • If it is required to encode details of the survey authority, it must be done using the attribute SURATH, and must not be encoded using the attribute SORIND. • If a feature has a source different to that given by the underlying M_SREL, this other source should be encoded using both the attributes SORIND and SORDAT on the feature, but only if this information is considered to be useful to the mariner. • QUAPOS on the M_SREL applies to bathymetric data situated within the area, while QUAPOS or POSACC on the associated spatial features, qualifies the location of the M_SREL feature itself. <p><u>Distinction:</u> Accuracy of data; quality of data</p>				

3.10 Vertical datum

IHO Definition: **VERTICAL DATUM.** An area of uniform vertical datum. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.218, November 2000).

Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i> <i>Paper Chart Symbol</i> <i>ECDIS Symbol</i>	M_VDAT (A)	VERDAT (M) Vertical datum	1 : Mean low water spring 2 : Mean lower low water springs 3 : Mean sea level 4 : Lowest low water 5 : Mean low water 6 : Lowest low water springs 7 : Approximate mean low water springs 8 : Indian spring low water 9 : Low water springs 10 : Approximate lowest astronomical tide 11 : Nearly lowest low water 12 : Mean lower low water 13 : Low water 14 : Approximate mean low water 15 : Approximate mean lower low water 16 : Mean high water 17 : Mean high water springs 18 : High water 19 : Approximate mean sea level 20 : High water springs 21 : Mean higher high water 22 : Equinoctial spring low water 23 : Lowest astronomical tide 24 : Local datum 25 : International great lakes datum 1985 26 : Mean water level 27 : Lower low water large tide 28 : Higher high water large tide 29 : Nearly highest high water 30 : Highest astronomical tide (HAT)	E

INT 1 Reference:

3.10.1 Vertical datum

Vertical datum information is encoded in the **data set metadata**, using the meta **feature M_VDAT**, or **by populating** the attribute VERDAT on individual **geo features**. The values encoded in the attributes ELEVAT, HEIGHT, VERCCL, VERCLR, VERCOP and VERCSA (**positive values up**) are referenced to the specified datum(s). VERDAT must not be encoded on any **feature** unless at least one of the above attributes is also encoded on that **feature**.

The default value for the entire data set must be given in the "Vertical Datum" [VDAT] subfield of the "Data Set Parameter" [DSPM] field.

If the vertical datum for an area is different to the value given in the VDAT subfield for the data set, it must be encoded using M_VDAT. The areas covered by these meta features must not overlap.

Meta feature: Vertical datum (M_VDAT)

Attributes: VERDAT INFORM NINFOM NTXTDS TXTDSC RECDAT
RECIND SORDAT SORIND

Height contours, going across areas having different values of vertical datum, must be split at the border of these areas.

Various datums are used on paper charts and these datums are used in the same way for ENC. For example, different datums may be used for the following:

- altitude of spot heights, height contours, landmarks,
- elevation of lights,
- vertical clearance.

Where different vertical datums are used for the various vertical measurements, the default value given in the metadata for the data set or M_VDAT applies to the first group of the above list. The attribute VERDAT on an individual feature applies to the elevation of lights and vertical clearances and must only be populated if different to the value given by the data set metadata or M_VDAT.

Remarks:

Distinction: Sounding datum.

4 Positions, Distances, Directions, Compass

4.1 Control Point

IHO Definition: CONTROL POINT . A point on the ground where position (horizontal and vertical) is used as a base for a dependent survey. Also referred to as a control station. (IHO Dictionary – S-32).				
Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	CTRPNT (P)	CATCTR (O) Category of control point	1 : triangulation point 2 : observation spot 3 : fixed point 4 : benchmark 5 : boundary mark 6 : horizontal control, main station 7 : horizontal control, secondary station	E
<i>Paper Chart Symbol</i>				
<i>ECDIS Symbol</i>				
<p>INT 1 Reference: B 20-24</p> <p>4.1.1 Control points (see S-4 – B-304; B-305.1 and B-306)</p> <p>If it is required to encode a control point, it must be done using the feature CTRPNT.</p> <p>Geo feature: Control point (CTRPNT)</p> <p>Attributes: CATCTR DATEND DATSTA ELEVAT NOBJNM OBJNAM INFORM NINFOM NTXTDS PICREP SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND</p> <p>Control points should only be encoded where there is some significance to the mariner, i.e. the point is prominent or visually conspicuous. Control points of interest mainly to the hydrographic surveyor rather than the mariner should be limited to the largest optimum display scale ENC data or omitted altogether.</p> <p>Remarks:</p> <p><u>Distinction</u>: Beacon, special purpose/general; daymark; land elevation; landmark; silo/tank; topmark.</p>				

4.2 Local Magnetic Anomaly

IHO Definition: **LOCAL MAGNETIC ANOMALY.** An anomaly of the magnetic field of the Earth, extending over a relatively small area, due to local magnetic influences. Also called local attraction or magnetic anomaly. (IHO Dictionary – S-32).

Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	LOCMAG (P, L, A)	VALLMA (M) Value of local magnetic anomaly		F
<i>Paper Chart Symbol</i>				
<i>ECDIS Symbol</i>				

INT 1 Reference: B 82.1-2

4.2.1 Local magnetic anomaly (see S-4 – B-274)

Of the various magnetic data, magnetic variation is the most important element for the mariner. If it is required to encode an abnormal magnetic variation in a localised area, it must be done using the feature **LOCMAG**.

Geo feature: Local magnetic anomaly (**LOCMAG**)

Attributes: NOBJNM OBJNAM VALLMA INFORM NINFOM NTXTDS
SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND

If the area cannot be defined, the feature should be represented as a point.

When the deviation for an area makes reference to a range rather than a specific value, the range of values should be indicated using the attribute INFORM (e.g. *From -27 degrees to 3 degrees*).

Remarks:

- Where the attribute VALLMA contains a value, the deviation is assumed to be positive and negative. The plus/minus character must not be encoded.
- Local magnetic variation should not be encoded unless it varies by more than about 3° from the normal magnetic variation (see clause X.X) for the area.

Distinction: Magnetic variation.

4.3 Magnetic Variation

IHO Definition: **MAGNETIC VARIATION.** The angle between the magnetic and geographic meridians at any place, expressed in degrees east or west to indicate the direction of magnetic north from true north. Also called magnetic declination. (IHO Dictionary – S-32).

Graphic	S-101 Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

INT 1 Reference: B 68, 70-71

4.3.1 Magnetic variation (see S-4 – B-261; B-270 to B-273)

Of the various magnetic data, magnetic variation is the most important element for the mariner. Until a world magnetic model is universally available for inclusion in ECDIS, if it is required to encode magnetic variation, it must be done using the feature **MAGVAR**. As a minimum, updates to the magnetic variation should be supplied to coincide with changes of epoch (i.e. every five years).

Geo feature: Magnetic variation (**MAGVAR**)

Attributes: DATEND DATSTA RYRMGV VALACM VALMAG INFORM
NINFOM SCAMIN RECDAT RECIND SORDAT SORIND

Remarks:

- Magnetic models are typically replaced every five years (e.g. 2005, 2010... termed epochs). Magnetic variation can be calculated from computer models, or derived from charts produced by certain Hydrographic Offices or mapping authorities, which show the spatial distribution of magnetic variation values worldwide for the current epoch, by means of lines of equal magnetic variation (termed isogonals). The rate-of-change curves, which are over-printed on such charts, enable values for any point to be extrapolated for any time within the current epoch.
- **MAGVAR** features of type line (isogonals) should be encoded at 1°, 2°, or 5° intervals so that spacing does not generally exceed 150mm at the optimum display scale of the ENC data. Isogonals should not be inserted at intervals of less than 1°, because diurnal and seasonal fluctuations in the earth's magnetic field can change the stated variation by up to 1° and, in some parts of the world, the data on which isogonals are based may not ensure the accuracy of charted values to better than ±2°. Where isogonals cannot be encoded such that the spacing does not exceed 150mm at the optimum display scale of the ENC data, **MAGVAR** of type point should be encoded.
- When populating the attribute VALACM, a positive value, i.e. unsigned, indicates a change in a easterly direction and a negative value indicates a change in a westerly direction.
- When populating the attribute VALMAG, a positive value, i.e. unsigned, indicates variation in a easterly direction and a negative value indicates variation in a westerly direction.

Distinction: Local magnetic anomaly.

5 Natural Features

5.1 Coastline

<u>IHO Definition:</u> COASTLINE. A line where shore and water meet. Although the terminology of coasts and shores is rather confused, shoreline and coastline are generally used as synonyms. (IHO Dictionary – S-32).				
Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i> <i>Paper Chart Symbol</i> <i>ECDIS Symbol</i>	COALNE (L)	CATCOA (O) Category of coastline	1 : steep coast 2 : flat coast 3 : sandy shore 4 : stony shore 5 : shingly shore 6 : glacier (seaward end) 7 : mangrove 8 : marshy shore 9 : coral reef 10 : ice coast 11 : shelly shore	E
		COLOUR (O) Colour	1 : white 2 : black 3 : red 4 : green 5 : blue 6 : yellow 7 : grey 8 : brown 9 : amber 10 : violet 11 : orange 12 : magenta 13 : pink	L
		CONRAD (O) Conspicuous, radar	1 : radar conspicuous 2 : not radar conspicuous 3 : radar conspicuous (has radar reflector) 4 : radar conspicuous (has Radar Target Enhancer)	E
		CONVIS (O) Conspicuous, visually	1 : visually conspicuous 2 : not visually conspicuous	E
<p><u>INT 1 Reference:</u> C 1-8, 25, 32-33</p> <p>5.1.1 Coastline (see S-4 – B-410 and B-411)</p> <p>Natural sections of coastlines, lakeshores and riverbanks should be encoded as COALNE, whereas artificial sections of coastlines, lakeshores, riverbanks, canal banks and basin borders should be encoded as SLCONS (see clause X.X). The exception to this general rule is when a lake, river, canal, or basin is not navigable at the <i>optimum display scale for the ENC data</i>, in which case the boundaries must not be encoded as COALNE or SLCONS.</p>				

Comment [j28]: S-57
Extension 06/01.

These features form the border of the land area (**LNDARE**) feature.

5.1.2 Natural coastline (see S-4 – B-312 and B-353.8)

Geo feature: Coastline (**COALNE**)

Attributes:	CATCOA	COLOUR	CONRAD	CONVIS	ELEVAT	NOBJNM
	OBJNAM	INFORM	NINFOM	NTXTDS	PICREP	SCAMIN
	TXTDSC	RECDAT	RECIND	SORDAT	SORIND	

Spatial features associated with coastlines considered to be inadequately surveyed at the optimum display scale for the ENC data (see S-4 – B-311) should be encoded using spatial attribute QUAPOS = 3 (inadequately surveyed).

If it is required to encode a description of the nature of the coastline, it must be done using the attribute CATCOA. Other area features may be used to describe the land region adjacent to the coastline (see clause X.X).

A steep coast may give a good radar return and is useful for visual identification from a considerable distance off, particularly where cliffs alternate with low lying coast along the shoreline.

Remarks:

- **COALNE** must only exist at the boundary of **LNDARE** of type area.
- **COALNE** and **SLCONS** of type line must not overlap. Similarly, **COALNE** should not share an edge with a **SLCONS** of type area (see clause X.X) having attribute WATLEV undefined or populated with the values 2 (always dry) or 1 (partly submerged at high water), which is covered by **LNDARE**.
- If the seaward edge of a mangrove area is coincident with the coastline, the coastline should be encoded as **COALNE**, with CATCOA = 7 (mangrove). If it is required to encode the area of the mangrove, this must be done using the feature **VEGATN** (see clause X.X). Where the source indicates that the mangrove area is within an intertidal area, the seaward limit of the mangrove area must not be encoded as **COALNE**, and the mangrove area must be encoded as **VEGATN**. See also S-4 - B-312.4. In all cases the spatial feature for the seaward edge of the mangrove should have attribute QUAPOS = 4 (approximate).
- If the seaward edge of a marsh area is coincident with the coastline, the coastline should be encoded as **COALNE**, with CATCOA = 8 (marshy shore), and the coastline's spatial feature should have the attribute QUAPOS = 4 (approximate) for the visible coastline. If it is required to encode the area of the marsh, this must be done using **VEGATN** (see clause X.X).
- If the seaward edge of an encoded saltpan area is coincident with the coastline, it should be encoded using **COALNE**, with CATCOA = 2 (flat coast).
- If the seaward edge of an encoded glacier is coincident with the coastline, this edge should be encoded using **COALNE**, with CATCOA = 6 (glacier (seaward end)).
- Where the source indicates a cliff is coincident with the coastline (see INT1 - C3), a **COALNE** feature, with CATCOA = 1 (steep coast) should be encoded. In such cases, there should be no **SLOTOP** or **SLOGRD** features encoded.

Distinction: Canal bank; lake shore; river bank; shoreline construction.

Comment [j29]: S-58 Test 51.

5.2 Land elevation

IHO Definition: LAND ELEVATION. An elevation is the vertical distance of a point or a level, on, or affixed to, the surface of the earth, measured from a specified vertical datum. (Adapted from IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	LNDELV (P, L)	ELEVAT (M) Elevation		F
<i>Paper Chart Symbol</i>		CONVIS (O) Conspicuous, visually	1 : visually conspicuous 2 : not visually conspicuous	E
<i>ECDIS Symbol</i>				

INT 1 Reference: C 10-13

5.2.1 Height contours, spot heights (see S-4 – B-351 and B-352.1-2)

It is assumed that mariners will understand most methods of representation of relief with little difficulty. In general it is assumed that HOs will choose the representation of relief most suitable to the terrain being charted and the navigational requirements. It is therefore left to national discretion to:

- omit all relief representation, except dykes and sea walls;
- omit all relief representation, except spot heights and cliffs;
- show relief by contours (and spot heights); or
- show relief by form lines (and spot heights).

Spot heights on ENC cells should be confined to summits of hills, mountains and cliffs, particularly on cells from which contours and form lines have been omitted; navigators will generally assume that heights selected for ENC are summits.

If it is required to encode a height contour or spot height, it must be done using the feature **LNDELV**.

Geo feature: Land elevation (**LNDELV**)

Attributes: CONVIS ELEVAT NOBJNM OBJNAM INFORM NINFOM
NTXTDS SCAMIN TXTDSC RECDAT RECIND SORDAT
SORIND

LNDELV features must be covered by a **LNDARE** feature of type area, or a **WRECKS** feature of type area having attribute WATLEV = 1 (partially submerged at high water) or 2 (always dry), or fall on a **LNDARE** feature of type line, or share the geometry of a **LNDARE** of type point or a **WRECKS** feature of type point having attribute WATLEV = 1 (partially submerged at high water) or 2 (always dry).

Height contours are associated with line spatial features, whereas spot heights are associated with point spatial features.

Spatial features associated with approximate contours or spot heights should be encoded using the attribute QUAPOS = 4 (approximate).

Remarks:

- Where it would not be worthwhile to contour ENC data of smaller optimum display scale, form lines (emphasizing a few 'remarkable' hills) and/or spot heights may be used to emphasize individual features.
- Contours should reflect the nature of the topography, i.e. they should not be rounded or smoothed (by generalisation) when they should really be angular.

- The contour interval must be uniform for any cell, or series of cells of the same or similar optimum display scale, except that the lowest contour may be a supplementary one, e.g. 25 metres where the basic interval is every 50 metres, or 10 metres where the basic interval is every 25 metres. Ideally the contour interval should be chosen so that not more than 10 contours are needed for the full range of height on a single cell or particular series of cells (for clarity and economy).

Distinction: Slope top line.

5.4 Rapids

<u>IHO Definition:</u> RAPID(S) . Portions of a stream with accelerated current where it descends rapidly but without a break in the slope of the bed sufficient to form a waterfall. Usually used in the plural. (<i>IHO Dictionary – S-32</i>).				
Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

INT 1 Reference: C 24, 26, 33

5.7.1 Natural sceneries (see S-4 – B-350)

The types of features charted and the distance inland to which they are shown will vary with chart scale, type of terrain, availability of source data and, possibly, adequacy of regular navigational aids. The significance to the mariner must be judged by the requirements of both visual and radar navigation.

The navigator sees the coast in profile; the cartographer sees it in plan and must always be aware that the navigator's interest in land detail is at its greatest at the coastline and falls off rapidly inland. On a low-lying coast, even minor clues to position near the coast, e.g. sand dunes, hillocks, low bluffs, may be very useful on the larger scale optimum display scale ENC data. On steep coasts with deep water close inshore, sea traffic is likely to be concentrated off projecting points of land, and the nature of each headland must be made clear, whether it has vertical cliffs, or a sloping or low profile, for example.

Off coasts inadequately marked by navigational aids, detailed topography in the coastal belt will allow the mariner to clear dangers with the aid of improvised visual transits of charted topographical features.

No definite standards can be stated but the following principles should be observed:

- The density of topographic detail shown should be kept to a minimum consistent with providing navigators with all identifiable features and with a general picture of the relief as far as the probable skyline. This practice should enable landmarks to stand out from less important detail.
- Treatment of detail should vary with distance inland, e.g. inconspicuous features such as marshes and minor lakes and streams should be shown only when within about a mile of the coast.

If it is required to describe the natural scenery of the land, or to give the geographic name of an area on land, it should be encoded using the feature **LNDRGN**.

Geo feature: Land region (**LNDRGN**)

Attributes: CATLND NATQUA NATSUR NOBJNM OBJNAM WATLEV
INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT
RECIND SORDAT SORIND

Remarks:

- This feature has a use similar to that of the feature **SEAARE** (see clause X.X), but for the land.
- At least one of **CATLND** or **OBJNAM** must be populated.
- A **LNDRGN** area should be bounded, if possible, by existing lines used by other features (e.g. **COALNE**). If necessary, however, this area may be bounded by other lines created to close the area, or to describe a new area.
- For named capes, points, peninsulas and other types of **LNDRGN** where there is no specific value for the attribute **CATLND**, the generic term "Cape", "Point", "Peninsula", etc may be included on the attributes **OBJNAM** and **NOBJNM**.
- **LNDRGN** features of type area may overlap.
- A **LNDRGN** feature of type area must be covered by features from Group 1 (**LNDARE**, **DEPARE**, **UNSARE** etc).

Marsh (see S-4 – B-312.2)

If it is required to encode a marshy area behind the coastline, it must be done using a **LNDRGN** feature, with attribute **CATLND** = 2 (marsh).

If the seaward edge of a marsh area is coincident with the coastline, the coastline should be encoded as a

COALNE feature, with attribute CATCOA = 8 (marshy shore), and the coastline's spatial **feature** should have the attribute QUAPOS = 4 (approximate) for the visible coastline.

Salt pans (see S-4 – B-353.7)

If it is required to encode **an area on land in which seawater is evaporated**, it must be done using a **LNDRGN feature**, with attribute CATLND = 15 (salt pan) covered by a **LNDARE feature** (i.e. the salt pan must not form a hole in the land area).

If the seaward edge of an encoded salt pan area is coincident with the coastline, **this edge** should **also** be encoded using a **COALNE feature**, with attribute CATCOA = 2 (flat coast).

Lava flow (see S-4 – B-355)

If it is required to encode a lava flow, it must be done using a **LNDRGN feature**, with attribute CATLND = 14 (lava flow).

Distinction: Sea area; land area; vegetation.

5.8 Vegetation

IHO Definition: **VEGETATION.** Plants collectively or individually, especially those dominating a particular area or habitat. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

Comment [j30]: Values 1, 10, 11, 12 should be deleted as they do not symbolize in ECDIS (ENC EB No. 29).

INT 1 Reference: C 14, 30, 31.1-8, 32

5.8.1 Vegetation (see S-4 – B-312.4; B-352.4 and B-354)

In most areas the vegetation cover is of negligible importance on charts with the exception of:

- Areas where trees or marsh form the apparent coastline; see S-4 – B-312;
- Isolated trees or clumps of trees forming landmarks;
- Where, near the coast, wooded areas alternate with areas without tree cover and so may assist in identifying headlands or other stretches of coastline.

The following features should be omitted from even the largest optimum display scale ENC data:

- Grassland, cultivated fields (including paddy fields), bushes.
- Trees along roads, fences, ditches, and scattered trees (unless landmarks).
- Woodland cover within urban areas (unless adjacent of the coast).
- Woodland cover which is the general ground cover and therefore useless for identification of position.

If it is required to encode vegetation, it must be done using the feature VEGATN.

Geo feature: Vegetation (VEGATN)

Attributes: CATVEG CONVIS ELEVAT
 HEIGHT - approximate altitude of the highest point of the top of the vegetation
 NOBJNM OBJNAM VERLEN INFORM NINFOM NTXTDS
 SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND

If it is required to encode an isolated tree used as a landmark, it must be done using a VEGATN feature, with

attribute CATVEG = 13 to 21.

If it is required to encode a mangrove area, it must be done using a **VEGATN feature**, with CATVEG = 7 (mangroves).

If the source indicates the seaward edge of a mangrove area lies in or bounds the seaward edge of an intertidal area, the seaward edge of the encoded mangrove area should be encoded using a **COALNE** feature, with attribute CATCOA = 7 (mangrove), and the mangrove area's corresponding spatial feature should have the attribute QUAPOS = 4 (approximate). The landward edge of the mangrove area (which also bounds **LNDARE**) should be encoded using a **COALNE** feature having no value for CATCOA and no value for QUAPOS for the related edge(s). Where the source indicates the seaward edge of the mangrove area is coincident with the high water line (boundary of **LNDARE**), the seaward edge of the encoded mangrove area should be encoded using a **COALNE** feature, with attribute CATCOA = 7 (mangrove), and the mangrove area's corresponding spatial feature should have the attribute QUAPOS = 4 (approximate).

Remarks:

- Where the source shows an island with the approximate height of the top of trees above height datum (see INT1 - C14), a **VEGATN feature** should be encoded co-incident with the **LNDARE feature** of the island, with attribute HEIGHT corresponding to the value shown on the source.

Distinction: Seabed area; weed/kelp.

5.9 Ice area

IHO Definition: ICE AREA. An area of ice over land or water. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.84, November 2000).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

<u>INT 1 Reference:</u> C 3, 4, 8; D 14, 15; F 1				

Comment [j31]: MD8 – 7.Co.22

Comment [j32]: S-57 Extension 06/01.

5.10.1 Sloping ground (see S-4 – B-312.1; B-312.3; B-363.2 and B-364.1)Geo feature: Sloping ground (**SLOGRD**)

Attributes:	CATSLO	COLOUR	CONRAD	CONVIS	NATSUR	NOBJNM
	OBJNAM	INFORM	NINFOM	NTXTDS	SCAMIN	TXTDSC
	RECDAT	RECIND	SORDAT	SORIND		

Remarks:

- **SLOGRD** of type area that are not radar conspicuous (i.e. **CONRAD** not equal to 1 (radar conspicuous)) and having attribute **CATSLO** = 1 (cutting), 2 (embankment), 3 (dune), 4 (hill) or 7 (scree) do not symbolise in the ECDIS. Where it is required to encode such areas, alternative features such as **LNDMRK** or **VEGATN** should be used.

Comment [j33]: ENC
Encoding Bulletin No. 29.

5.10.2 Dunes, sand hills (see S-4 – B-312.3)

If it is required to encode a sand dune or sand hill, it must be done using the feature **SLOGRD** with attribute **CATSLO** = 3 (dune) or 4 (hill) and attribute **NATSUR** = 4 (sand). If these features are positioned along the coastline, a **COALNE** feature must also be encoded.

If it is required to encode the height of a dune or sand hill, a **LNDELV** feature (see clause X.X) must also be encoded.

5.10.3 Cliffs (see S-4 – B-312.1)

A coast backed by rock or earth cliffs gives a good radar return and is useful for visual identification from a considerable distance off, where cliffs alternate with low lying coast along the shoreline. Where cliffs are prominent features they should be encoded on the larger optimum display scale for the ENC data; as an exception, where cliffs predominate over extensive stretches of coastline, it may be neither feasible nor particularly useful to insert a cliff throughout. Cliff top heights are useful for calculating or estimating distance off, (for clearing inshore dangers) and should be encoded where possible.

If it is required to encode a cliff, it must be done using a **SLOGRD** feature, with attribute **CATSLO** = 6 (cliff) and/or using the feature **SLOTOP** (see clause X.X). For example:

SLOGRD may be used at large scale to indicate the horizontal extent of the cliff.

SLOTOP should be used on its own to encode cliffs at small scale, or in conjunction with **SLOGRD** to indicate the crest of the cliff when it is considered useful to know its elevation, and/or to encode a cliff on land distant from the coastline.

Remarks:

- When the cliff is coincident with the coastline, a **COALNE** feature, with attribute **CATCOA** = 1 (steep coast) should be encoded, and there should be no **SLOGRD** or **SLOTOP** encoded.

5.10.4 Cuttings and embankments (see S-4 – B-363.2 and B-364.1)

If it is required to encode cuttings and embankments, this must be done in the same way as cliffs; using **SLOGRD** and/or **SLOTOP** features, with attribute **CATSLO** = 1 (cutting) or 2 (embankment).

Remarks:

- Cuttings and embankments should be encoded only when likely to be visible from seaward.

Distinction: Slope topline.

5.11 Slope topline

IHO Definition: **SLOPE TOPLINE.** The upper marking of a slope, e.g. the ridge line or the separation line between two different gradients. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.160, November 2000).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

 TXTDSC RECDAT RECIND SORDAT SORIND

5.11.2 Cliffs (see S-4 – B-312.1)

A coast backed by rock or earth cliffs gives a good radar return and is useful for visual identification from a considerable distance off, where cliffs alternate with low lying coast along the shoreline. Where cliffs are prominent features they should be encoded on the larger optimum display scale ENC data; as an exception, where cliffs predominate over extensive stretches of coastline, it may be neither feasible nor particularly useful to insert a cliff throughout. Cliff top heights are useful for calculating or estimating distance off, (for clearing inshore dangers) and should be encoded where possible.

If it is required to encode a cliff, it must be done using a **SLOTOP** feature, with attribute CATSLO = 6 (cliff) and/or using the feature **SLOGRD** (see clause 6.10). For example:

SLOGRD may be used at large scale to indicate the horizontal extent of the cliff.

SLOTOP should be used on its own to encode cliffs at small scale, or in conjunction with **SLOGRD** to indicate the crest of the cliff when it is considered useful to know its elevation, and/or to encode a cliff on land distant from the coastline.

Remarks:

- When the cliff is coincident with the coastline, a **COALNE** feature, with attribute CATCOA = 1 (steep coast) should be encoded, and there should be no **SLOTOP** or **SLOGRD** encoded.

5.11.3 Cuttings and embankments (see S-4 – B-363.2; B-364.1)

If it is required to encode cuttings and embankments, this must be done in the same way as cliffs; using **SLOTOP** and/or **SLOGRD** features, with attribute CATSLO = 1 (cutting) or 2 (embankment).

Remarks:

- Cuttings and embankments should be encoded only when likely to be visible from seaward.

Distinction: Land elevation; sloping ground.

5.12 Pingo

IHO Definition: PINGO. Small conical hills having a large central core of ice formed from the encroachment of permafrost and the resulting hydrostatic pressure. (IHO Dictionary – S-32).

Extension 06/01.

INT 1 Reference: D 1-4

6.1.1 Built-up areas (see S-4 – B-370.3-4 and B-370.6-7)

When representing built-up areas, the aim of the compiler must be to create the correct impression of the extent of the built-up area.

If it is required to encode a built-up area, it must be done using the feature **BUAARE**.

Geo feature: Built-up area (**BUAARE**)

Attributes: CATBUA COND TN CONRAD CONVIS HEIGHT NOBJNM
OBJNAM INFORM NINFOM NTXTDS PICREP SCAMIN
TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- A built-up area crossed by line features (e.g. roads, streets, railways) should not be divided into multiple features, unless separate sections of the built-up area have at least one different attribute value.
- However, for presentation purposes, a built up area of type area crossed by a river or canal of type area must be divided into several features, with the built-up area features not overlapping the river or canal feature. A built up area of type area should not overlap a lake, dock or lock basin feature of type area.
- Several buildings or built-up areas may be referred to by the same settlement, village or town name on the source. In such cases, the individual buildings or built-up areas should be encoded as separate unnamed features, using the features **BUISGL** or **BUAARE**, and additionally, an **ADMARE** feature (see clause X.X) covering the whole named area should be created with the name encoded using the attribute OBJNAM. The encoded **ADMARE** feature should also have the attribute JRS DTN = 3 (national sub-division).

- **BUAARE** must be covered by **LNDARE** features of type area, or be coincident with **LNDARE** features of type point.

Distinction: Building single; landmark; railway; road; square.

Comment [j38]: S-58 Check 56.

6.2 Building, single

IHO Definition: **BUILDING, SINGLE.** A free-standing self-supporting construction that is roofed, usually walled, and is intended for human occupancy (for example: a place of work or recreation) and/or habitation. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

INT 1 Reference: D 17

6.3.1 Airfields (see S-4 – B-366)

Airfields (or airports) within a few miles of the coast must be charted on larger and medium optimum display scale ENC data; they are significant to coastal navigation because of the many visual and aural features associated with them and the related air traffic.

For ENC data having larger optimum display scales, an airport should be encoded using a combination of the following features: **AIRARE** (area), **RUNWAY** (area or line), **BUISGL** (area or point) and **LNDMRK** (area or point). At least one **AIRARE** or **RUNWAY** must be in this set of features. Where it is necessary to establish a relationship between these features, they should be associated using the collection feature **C_ASSO** (see clause X.X).

For ENC data having smaller optimum display scales, an airport should be encoded as an **AIRARE** of type point.

Geo feature: Airport / airfield (**AIRARE**)

Attributes: CATAIR CONDTN NOBJNM OBJNAM STATUS INFORM
NINFOM NTXTDS PICREP SCAMIN TXTDSC RECDAT
RECIND SORDAT SORIND

Remarks:

- If individual buildings are visually conspicuous, they must be encoded as separate features.
- If it is required to encode the control tower, it must be done using a **LNDMRK** feature, with attributes

FUNCTN = 39 (control) and CATLMK = 17 (tower). If it is required to encode other buildings, this must be done using the feature **BUISGL**.

- If it is required to encode a seaplane landing area, it must be done using the feature **SPLARE** (see clause X.X).

Distinction: Runway; seaplane landing area.

6.4 Runway

IHO Definition: RUNWAY. A defined rectangular area, on a land aerodrome, prepared for the landing and take-off run of aircraft along its length. (IHO Dictionary – S-32).
 A site on which helicopters may land and take off. (IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

Comment [j43]: Should not be allowed for S-101 ENC's – does not display in ECDIS. Refer ENC EB 29.

INT 1 Reference: D 17

6.4.1 Airfields (see S-4 – B-366)

Airfields (or airports) within a few miles of the coast must be encoded on large and medium optimum display scale ENC data; they are significant to coastal navigation because of the many visual and aural features associated with them and the related air traffic.

For larger optimum display scales ENC data, an airport should be encoded using a combination of the following features: AIRARE (area), RUNWAY (area or line), BUISGL (area or point) and LNDMRK (area or point). At least one AIRARE or RUNWAY must be in this set of features. Where it is necessary to establish a relationship between these features, they should be associated using the collection feature C_ASSO (see clause X.X).

Geo feature: Runway (RUNWAY)
 Attributes: CATRUN CONDTN NATCON NOBJNM OBJNAM PEREND
 PERSTA STATUS INFORM NINFOM NTXTDS SCAMIN
 TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- Two or more crossing runways may be encoded as one area.
- If it is required to encode a seaplane landing area, it must be done using the feature SPLARE (see clause X.X).

- For navigational aids associated with air navigation, and air obstruction lights, see clauses related to navigational aids.

Distinction: Airport/airfield; seaplane landing area.

6.5 Bridge

IHO Definition: **BRIDGE.** A structure erected over a depression or an obstacle such as a body of water, railroad, etc., to provide a roadway for vehicles or pedestrians. (IHO Dictionary – S-32).

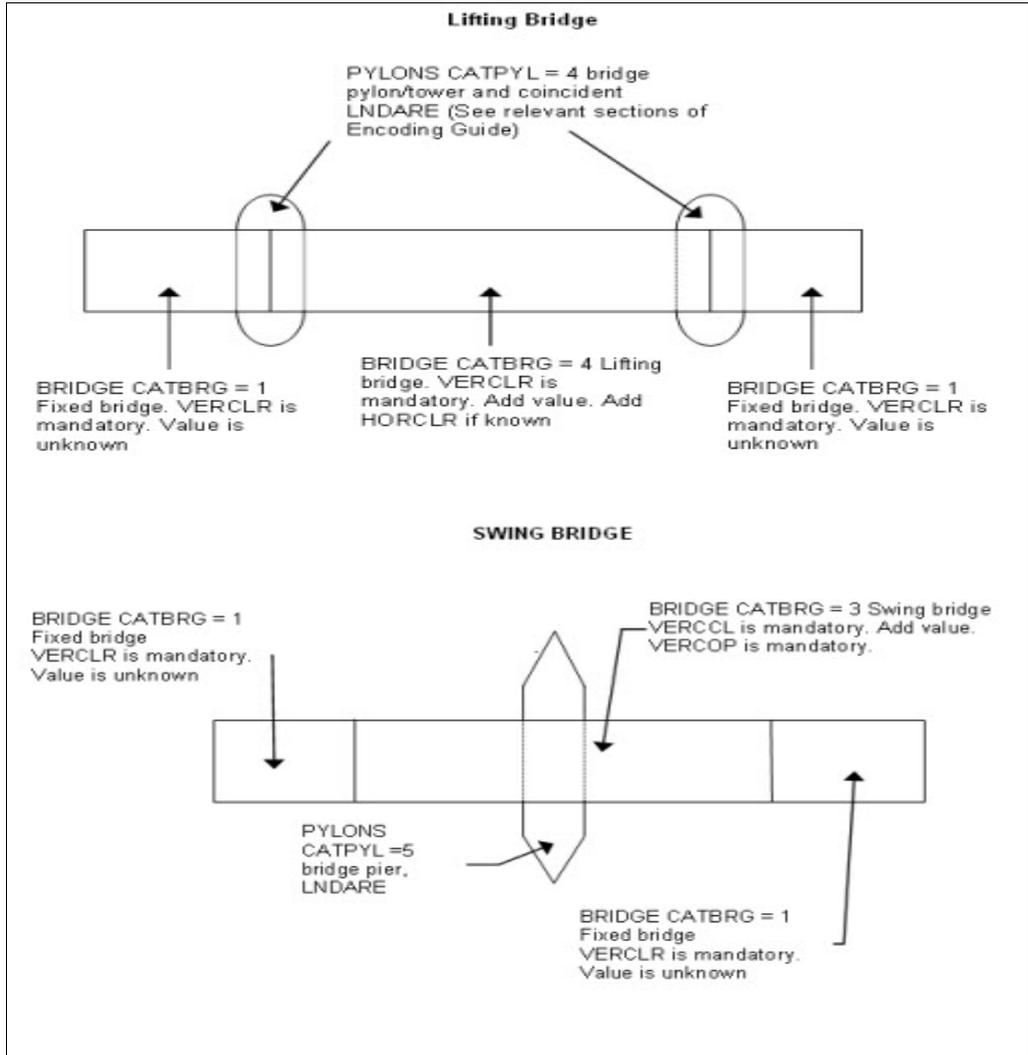

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

ICEFAC	NOBJNM	OBJNAM	STATUS		
VERACC	- applies only to VERCLR and VERCSEA				
<u>VERCLR</u>	<u>VERCSEA</u>				
VERDAT	- applies only to VERCLR and VERCSEA				
INFORM	NINFOM	NTXTDS	SCAMIN	TXTDSC	RECDAT
RECIND	SORDAT	SORIND			

The value of the vertical clearance between (high) water level and any fixed overhead obstruction must always be given, where known, on the largest optimum display scale ENC data intended for navigation under the obstruction, and for detailed passage planning. The datum above which clearances are given must be a high water level, preferably Highest Astronomical Tide (HAT), where the tide is appreciable. For overhead cables, it must be populated for the attributes VERCLR or VERCSEA relevant to the least clearance for the cable, rounded down to the nearest whole metre (unless under 10m, when metres and decimetres may be quoted). In areas where the tidal range is not appreciable the datum above which clearance is given should be Mean Sea Level (MSL).

For power cables or transmission lines carrying very high voltages, an additional vertical clearance of from 2 to 5 metres may be needed to avoid an electrical discharge. When known, the authorised safe clearance (known as the safe vertical clearance), which is the physical clearance minus a safety margin, must be populated using the attribute VERCSEA.

Remarks:

- If it is required to encode telepheric cables, this must be done using **CONVYR features** (see clause X.X), with attribute CATCON = 1 (aerial cableway (telepheric)).
- Where a cable has radar reflectors, they must be encoded as separate **RADRFL features** (see clause X.X). If the whole cable is radar conspicuous, or the optimum display scale for the data is too small to show individual reflectors, the **CBLOHD** should be encoded with attribute CONRAD = 1 (radar conspicuous).
- In navigable water, overhead cable supports must be encoded, where possible, using a **PYLONS feature** (see clause X.X), with attribute CATPYL = 1 or 2.

Distinction: Cable area; cable, submarine; conveyor; pylon/bridge support.

6.8 Pipeline, overhead

IHO Definition: PIPELINE. A string of interconnected pipes used for the transport of matter, nowadays mainly oil or gas. (IHO Dictionary – S-32).

An overhead pipeline is a pipeline supported by pylons and passing over or nearby navigable waters. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.119, November 2000).

INT 1 Reference: D 13

6.11.1 Railways (see S-4 – B-328.4 and B-362)

In urbanized areas, depiction of railways within some miles of the coast is part of the ENC's function in giving a general indication of the degree of land development. In largely undeveloped areas, the depiction of railways to isolated ports draws attention to such ports and may be of some maritime interest for transport purposes. Railways should be encoded on larger and medium optimum display scale ENC data.

Where railways run just inshore of the coast, or down to it, together with associated bridges, signal posts and other structure, they provide essential identification features. It should not generally be necessary to depict the smaller associated features - post, gantries etc.

If it is required to encode a railway, it must be done using the feature **RAILWAY**.

Geo feature: Railway (**RAILWAY**)

Attributes: COND TN HEIGHT NOBJNM OBJNAM STATUS INFORM
 NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND
 SORDAT SORIND

Remarks:

- If it is required to encode a railway station, it must be done using a **BUISGL** feature, with attribute FUNCTN = 8 (railway station). On the largest optimum display scale ENC data, the names of railway terminals or main stations may be populated using the attribute OBJNAM for the **BUISGL**.
- Abandoned railways (those which are mostly still intact) should be encoded. If required, they should be encoded with the attribute STATUS = 4 (not in use).

Distinction: Road; tunnel.

6.12 Road

IHO Definition: ROAD. An open way for the passage of vehicles. (United States Geological Survey, Jan. 89).				
Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

6.12.1 Roads and tracks (see S-4 – B-365)				

Comment [j56]: S-57
Extension 06/01.

On the largest optimum display scale continuous coastal series of ENCs, and larger optimum display scale ENC data, all roads and tracks running down to the coastline should be encoded where optimum display scale permits. Particular attention must be given to local roads serving minor piers, boat hards and landings. Inland, major roads within a few miles of the coast should be encoded to give a general indication of the degree of development, but tracks and all or some of the minor roads should be omitted. In largely undeveloped areas, with very few roads, it may be desirable to encode even minor roads inland.

On smaller optimum display scale ENC data, roads must be omitted

If it is required to encode a road or track, it must be done using the feature **ROADWY**.

Geo feature: Road (**ROADWY**)

Attributes:	CATROD	COND TN	NATCON	NOBJNM	OBJNAM	STATUS
	INFORM	NINFOM	NTXTDS	SCAMIN	TXTDSC	RECDAT
	RECIND	SORDAT	SORIND			

Remarks:

•—Road crossings (attribute CATROD = 7) should not be encoded.

Distinction: Causeway; railway, square.

6.13 Tunnel

IHO Definition: TUNNEL. A passage that is open to the atmosphere at both ends, buried under the seabed or laid over the sea floor or bored under the ground or through mountains. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.191, November 2000).

Comment [j61]: MD8 – 8.Co.1

- For buildings, see clause X.X; for silos and tanks, see clause X.X.
- A water tower must be encoded, where required, using the feature **SILTNK** (see clause X.X).
- A ruined landmark should be encoded in the same way as the feature in good condition, but with attribute **COND TN = 2** (ruined).
- Radio and television masts and towers are likely to be visible over long distances and should be encoded as landmarks, even when well inland. They will usually carry air obstruction lights.
- To aid identification of landmarks by the mariner it may be useful to add the height of the top of the structure above ground level (**VERLEN**) or above the general height datum (**HEIGHT**).
- Buildings constructed as places of worship often form significant landmarks; their size and structure incorporating towers, spires, cupolas, etc often render them conspicuous. These buildings when known to be prominent or conspicuous should be encoded up to several miles inland (see Figure below, examples (a) and (b)).
- The attribute **CATSPM** should only be used if the **LNDMRK** is used as the front or rear lead for a transit, clearing line or measured distance, or for a leading line. Values for **CATSPM** such as 16, 17 or 41 in particular should be used for these purposes. See also clause X.X.
- When a building is shown as an area, indicating its true shape, and it is required to encode a prominent feature such as a tower or spire that is part of the structure, two features must be created (see Figure below):
 - a **BUISGL** feature of type area for the main building,
 - a **LNDMRK** feature of type point for the prominent feature.

Comment [j62]: MD8 – 8.Co.1

- Not all landmarks are visually conspicuous. If a feature is visually conspicuous (i.e. it is distinctly and noticeably visible from seaward), the attribute **CONVIS = 1** (visually conspicuous) must be encoded (see S-4 – B-340).

Distinction: Beacon, special purpose/general; building single; control point; daymark; pylon/bridge support; silo/tank; topmark.

Comment [j63]: MD8 – 7.Cl.4 and 7.Co.16

Comment [j64]: MD8 – 7.Cl.4 and 7.Co.16

7.2 Silo/tank

IHO Definition: **SILO/TANK.** An enclosed container, used for storage. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

INT 1 Reference: E 2, 32-33

7.2.1 Tanks, silos (see S-4 – B-340.2 and B-376)

Isolated tanks or gasholders may be good landmarks and should be represented true to scale (i.e. as area) where possible (to enable tangents to their sides to be used in position-fixing). Groups of tanks, as at a refinery, may be useful for general identification of position but cannot usually be used for precise position-fixing because of uncertainty of the location of individual tanks.

If it is required to encode a tank or silo, it must be done using the feature **SILTANK**.

Geo feature: Silo / tank (**SILTANK**)

Attributes:

BUIHSP	CATSIL	COLOUR	COLPAT	CONDTN	CONRAD

PRODCO	STATUS	VERLEN	INFORM	NINFOM	NTXTDS
PICREP	SCAMIN	TXTDSC	RECDAT	RECIND	SORDAT
SORIND					

Remarks:

- For buildings, see clause X.X; for landmarks, see clause X.X.
- Groups of tanks in close proximity (tank farm) must be encoded, where required, using the feature **PRDARE** (see clause X.X). Individual, visually conspicuous tanks within a tank farm may be encoded as **SILTANK** within the **PRDARE**.

Distinction: Building, single; control point; landmark; production/storage area.

7.3 Fortified structure

IHO Definition: **FORTIFIED STRUCTURE**. A structure that is specifically designed or reinforced to provide for defense from armed attack. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Comment [j73]: S-57
Extension 06/01.

Comment [j74]: ENC EB No.
29.

8 Ports

8.1 Works under construction and projected (see S-4 – B-329)

An ENC can seldom show the exact state of work under construction because it may not be known by the encoder and, even if known, must be expected to change between ENC updates (see clause X.X). Where it is possible to provide the mariner with an indication of the status of work under construction, under reclamation or planned, it must be done using the appropriate feature (e.g. **SLCONS**, **CAUSWY**, **DOCARE**, **DRYDOC**, **PIPSOL**), with the attribute CONDTN populated as 1 (under construction), 3 (under reclamation) or 5 (planned construction). Where the encoder wishes to provide such information to the mariner and the details of the works are not known (nature and extent of the works), this should be done using the feature **CTNARE** (see clause X.X), with known details of the works populated using the attribute INFORM or through a text file referenced by the attribute TXTDSC.

If it is required to provide the mariner with an indication of the date to which information regarding the works is current, it must be done using the attribute SORDAT (see clause X.X).

As the works progress and further information is supplied to the Producing Authority, ENC cells should be updated appropriately through the issue of updates to the cell or publication of new editions of the cell (see clause X.X).

On completion of the works, full encoding of the of the new feature(s) in accordance with the relevant clauses in this document must be achieved, and incorporated in the relevant ENC cell through the issue of an update to the cell or publication of a new edition of the cell (see clause X.X).

8.1.1 Works on land (see S-4 – B-329.1)

Features likely to be prominent from seaward should be encoded as described above, where possible. New docks, locks, canals, etc, being excavated should be encoded similarly. The works must be covered by the feature **LNDARE** (see clause X.X) until completion of the works.

8.1.2 Works at sea (see S-4 – B-329.2-5)

Works at sea which will extend the coastline seaward, where the line of the future coastline (including piers, etc) is known, must be encoded, where required, as described in clause 8.1 above, using the appropriate features. The existing coastline should remain until the works are completed and the new coastline has been established. The area of reclamation or construction must also be covered by the appropriate feature(s) from Group 1. This may be **DEPARE** at commencement of the works, or if the works are planned and have not yet commenced; **UNSARE** while reclamation/construction is in progress but the area is still covered by water; or **LNDARE** where the area of the works has been reclaimed (i.e. is always dry).

Works at sea which will be wholly or partly submerged when completed, such as training walls or pipelines must be encoded, if required, using the appropriate feature relevant to the completed feature, in accordance with clause 8.1 above. The appropriately attributed depth information, if known, or **UNSARE**, must cover the works as appropriate.

Where the extent or nature of the works is unknown, they must be encoded, where required, using the feature **CTNARE** as described in clause 8.1 above.

Because lights and buoys marking the limits of works at sea may be moved without notice, they should be encoded only where it is considered safe to do so. Alternatively, this information may be included by populating the attribute INFORM for the feature(s) comprising the works with, for instance, *Outer end marked by red lights*.

8.2 Checkpoint

IHO Definition: **CHECKPOINT.** An official location at which to register, declare and/or inspect goods and/or people. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

8.4.1 Piles (see S-4 – B-327.3)

If it is required to encode a pile or post that is not used as a mooring/warping facility or an aid to navigation, it must be done using the feature **PILPNT**.

Geo feature:	Pile (PILPNT)					
Attributes:	CATPLE	COLOUR	COLPAT	CONDTN	CONRAD	CONVIS
	DATEND	DATSTA	HEIGHT	NOBJNM	OBJNAM	VERLEN
	INFORM	NINFOM	NTXTDS	SCAMIN	TXTDSC	RECDAT
	RECIND	SORDAT	SORIND			

Remarks:

- Stumps of piles or posts that are dangerous to navigation must be encoded, where required, using **OBSTRN** features (see clause X.X), with attribute CATOBS = 1 (snag/stump), and must not be encoded using **PILPNT**.
- Stakes and posts that are identified on the source to serve the purpose of aids to navigation must be encoded, where required, using the appropriate beacon feature (e.g. **BCNSPP**), with attribute BCNSHP = 1 (stake, pole, perch, post).
- Where the source indicates the existence of a navigation aid equipment feature (see clause X.X), but there is no indication as to the type or shape of the structure feature, a **PILPNT** feature must be encoded as the master feature (see clause X.X).
- See clause X.X for details of how to encode a pile or post that is used as a mooring/warping facility.
- Where an encoded **CRANES**, **BUISGL**, **FORSTC**, **LNDMRK** or **SILTNK** feature of type point is situated in the water and there is no indication on the source as to the structure that supports the feature, a **PILPNT** feature must be encoded coincident.

Distinction: Beacon, cardinal; beacon, isolated danger; beacon, lateral; beacon, safe water; beacon special purpose/general; mooring/warping facility.

Comment [j81]: S-58 test 54.

8.5 Dyke

IHO Definition: **DYKE.** A dyke (or dike) is an artificial embankment to contain or hold back water. (IHO Dictionary – S-32).

8.5.1 Dykes (see S-4 – B-313.1)

Dykes and seawalls are primarily designed to prevent inundation, and generally have regular outlines.

If it is required to encode a dyke, it must be done using the feature **DYKCON**.

Geo feature: Dyke (**DYKCON**)

Attributes: COND TN CONRAD DATEND DATSTA HEIGHT NATCON
 VERLEN INFORM NINFOM NTXTDS SCAMIN TXTDSC
 RECDAT RECIND SORDAT SORIND

Remarks:

- If it is required to encode a dyke whose seaward edge is coincident with the coastline, it must be done using **DYKCON**, and with a **SLCONS** feature of type line along its seaward edge, with no value populated for attribute CATSLC.
- When a **DYKCON** feature is of type area, it must be covered by a **LNDARE** feature.
- At large compilation scales, the dyke crown (the topline of the dyke) may be encoded as a **SLOTOP** feature, with attribute CATSLO = 2 (embankment).

Distinction: Dam; sloping ground; slope top line.

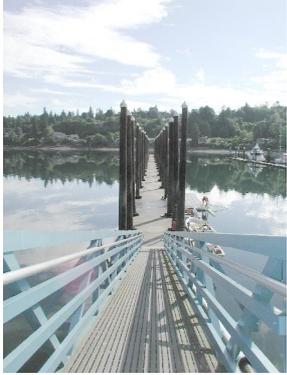

8.6 Shoreline construction

IHO Definition: **SHORELINE CONSTRUCTION.** A fixed artificial structure in the water and/or adjoining the land. It may also refer to features such as training walls, which are not necessarily connected to, nor form part of the shoreline. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.154, November 2000, as amended).

Comment [j85]: S-57 Extension 06/01.

Comment [j86]: S-57 Extension 06/01.

8.6.1 Coastline

Natural sections of coastlines, lakeshores and riverbanks should be encoded as **COALNE** (see clause X.X), whereas artificial sections of coastlines, lakeshores, riverbanks, canal banks and basin borders should be encoded as **SLCONS**. The exception to this general rule is when a lake, river, canal, or basin is not navigable at the optimum display scale for the ENC data, in which case the boundaries must not be encoded as **COALNE** or **SLCONS**.

These features form the border of the land area (**LNDARE**) feature.

8.6.2 Artificial coastline (see S-4 – B-313; B-320-322; B-324 and B-329)

The largest optimum scale ENC data should make clear whether any shoreline construction along the coastline is intended for ships to berth alongside or not. In most instances, the associated detail (name or berth number, depths alongside, dolphins, cargo sheds, cranes or railway lines), in addition to the usually distinctive outline of such features as piers and jetties, will be sufficient to show that ships may come alongside. For shoreline constructions not intended to berth alongside (such as breakwaters and seawalls), an indication that ships do not go alongside may be given by encoding the sloping sides (e.g. the intertidal portion of the structure). If there is a possibility of misinterpretation by the mariner, the danger may be indicated by encoding an **OBSTRN** area feature (see clause X.X) with the seaward edge running parallel to the shoreline construction.

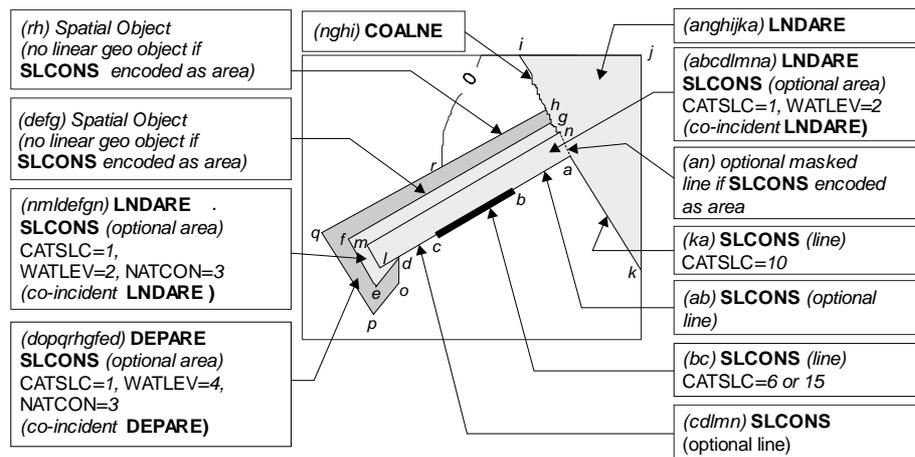

If it is required to encode artificial sections of coastlines; or lakeshores, riverbanks, canal banks and basin borders that are navigable at the optimum display scale for the ENC data, this must be done using the feature **SLCONS**.

Geo feature: Shoreline construction (**SLCONS**)

Attributes:

CATSLC	COLOUR	COLPAT	CONDTN	CONRAD	CONVIS
DATEND	DATSTA	HEIGHT			
HORACC - applies to HORCLR					
HORCLR	HORLEN	HORWID	NATCON	NOBJNM	OBJNAM
STATUS	VERLEN	WATLEV	INFORM	NINFOM	NTXTDS
SCAMIN	TXTDSC	RECDAT	RECIND	SORDAT	SORIND

The Figure below represents a shoreline construction such as a mole, including a berthing facility (INT1 - F12), with a relatively flat top (abcdlmna), and sloping sides partly above high water (nmldefgn) and partly intertidal (dopqrhgfed).

Remarks:

- Each of the three area parts of the example shoreline construction above may be encoded as separate **SLCONS** features of type area; the masked line (an) must be encoded; and, if part of the **SLCONS**

boundary has a different characteristic (e.g. (bc) attribute CATSLC = 6 or 15), it should be encoded as a separate **SLCONS** feature of type line. Alternatively, all the boundaries of the components of the shoreline construction may be encoded as **SLCONS** features of type line.

- In this example, the shoreline construction area above the high water line must also be covered by a **LNDARE** feature of type area, and the intertidal shoreline construction area must also be covered by a **DEPARE** feature of type area with attribute **DRVAL1 = -H** (see clause X.X).
- **SLCONS** features must be broken into their constituent parts where possible, and categorised using attributes such as CATSLC and WATLEV as indicated on the source.
- If the presence of a feature is only indicated on the source by a textual reference, without a clear symbol (e.g. 'pier', 'groyne', 'post'), it should be encoded using a **CTNARE** feature with the textual reference encoded using the attribute INFORM.
- Intertidal or submerged artificial rock walls, such as training walls that are not attached to the shoreline, must be encoded, if required, as **SLCONS** using the appropriate value for CATSLC, and WATLEV = 3 (always under water/submerged) or WATLEV = 4 (covers and uncovers).

Distinction: Canal bank; causeway; coastline; dry dock; floating dock; gridiron; land area; pontoon.

8.7 Causeway

<u>IHO Definition:</u> CAUSEWAY . A raised way across low or wet ground or water. (IHO Dictionary – S-32).

8.15.1 Dry docks (see S-4 – B-326.1)

A dry dock (or graving dock) is an artificial basin into which a ship can be floated for cleaning and repairs. The entrance can be closed by gate or caisson and the water pumped out to expose the vessel's bottom.

If it is required to encode a dry dock, it must be done using the feature **DRYDOC**.

Geo feature: Dry dock (**DRYDOC**)

Attributes:
 COND TN
 DRVAL1 - minimum depth in the dock when the gate is open
 HORACC - applies to HORCLR
 HORCLR HORLEN HORWID NOBJNM OBJNAM QUASOU
 SOUACC STATUS
 INFORM - maximum draft permitted in the dock (e.g. *Maximum draft permitted = 6 metres*)
 NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND

Remarks:

- This **feature** has a use similar to that of the **feature LNDRGN** (see clause X.X), but for the sea.
- A **SEAARE feature** of type area should be bounded, if possible, by existing lines used by other **features** (e.g. **DEPCNT**, **COALNE**). If necessary, however, this area may be bounded by other lines created to close the area, or to describe a new area.
- For seas, oceans, gulfs and other types of sea area, where there is no specific value for the attribute CATSEA, the generic term 'Sea', 'Ocean', 'Gulf', etc may be included in the attributes OBJNAM and NOBJNM.
- **SEAARE features** of type area may overlap.
- A **SEAARE feature** of type area must be covered by features from Group 1 (**DEPARE**, **DRGARE**, **UNSARE** etc).

Distinction: Administration area (named); depth area; seabed area.

10 Tides, Currents

See S-4 – B-406 to B-408

The inclusion of tidal information in ENC data sets is optional.

For Standard Ports the appropriate national Hydrographic Office or an organisation authorised by it should provide the predictions.

For Secondary Ports, the appropriate Hydrographic Office or an organisation authorised by it should, where possible, provide the predictions. Should such predictions not be available, the ECDIS manufacturer should approach the appropriate national Hydrographic Office for advice regarding the best methods of prediction for the Secondary Ports in its area of responsibility.

It is recommended that each appropriate Hydrographic Office, or an organisation authorised by it, should determine the spatial limits for applying tidal information where applicable, and the number of tidal stations to be used in modelling. Hydrographic Offices should be responsible for determining the best methodologies to be used in their areas of responsibility.

Where tidal information is encoded, it must be assessed to a minimum confidence level of 95%, irrespective of the method of application or its source.

10.1 Tidal stream – flood/ebb

IHO Definition: TIDAL STREAMS. A tidal stream (or tidal current) is a horizontal movement of water associated with the rise and fall of the tide caused by tide-producing forces. (Adapted from IHO Dictionary – S-32).

Approximate tidal stream rates may be given as discrete rate values for flood and ebb flow during springs. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.173, November 2000).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
Real World	TS_FEB (P, A)	CAT_TS (M) Category of tidal stream	1 : flood stream 2 : ebb stream 3 : other tidal flow	E
Paper Chart Symbol		CURVEL (M) Current velocity		F
ECDIS Symbol		ORIENT (M) Orientation		F

INT 1 Reference: H 40, 41

10.1.1 Tidal stream (flood/ebb) (see S-4 – B-407 and B-407.4)

The term “tidal streams” (French: “courants de mare”, US usage: “tidal currents”), is used to designate the periodical horizontal movements of the water, which are astronomical in origin. These are distinguished from “currents” (French: “courants généraux”), which are not dependent on astronomical conditions. In practice the navigator experiences a combination of tidal stream and current. Tidal streams are defined by the direction towards which they flow. The terms “flood stream” and “ebb stream” are used for designating the horizontal movement of the water when the tide is respectively rising or falling. To avoid any ambiguity, in the case of streams which do not turn at about the time of local high or low water, an indication must be given of the direction towards which the stream flows.

Where data are inadequate for tabulated information (**TS_PAD** – see clause X.X), or where otherwise required, single observations comprising flood and ebb directions and/or rates, preferably corresponding to maximum rates at the spring tide, should be encoded.

If it is required to encode tidal stream information that is limited to flood and ebb directions and/or values, it must be done using the feature **TS_FEB**.

Geo feature: Tidal stream-flood/ebb (**TS_FEB**)
Attributes: **CAT_TS**
CURVEL - maximum rate (during springs)
 DATEND DATSTA NOBJNM OBJNAM ORIENT PEREND
 PERSTA INFORM NINFOM NTXTDS SCAMIN TXTDSC
 RECDAT RECIND SORDAT SORIND

Remarks:

- Rates (velocities) of tidal streams, where known, must be encoded in knots using the attribute **CURVEL**, and should be quoted to one decimal place. In rivers and estuaries where there are permanent currents caused by the flow of river water, such currents must be included in the calculation of the rate.

Distinction: **Current – non-gravitational**; tidal stream - harmonic prediction; tidal stream - non harmonic prediction; tidal stream panel data; tidal stream - time series.

10.2 Current – non-gravitational

IHO Definition: CURRENT – NON-GRAVITATIONAL. Currents (non-gravitational) include either singly or in combination: ocean currents (wind and/or density driven), inter-oceanic equalising currents, currents of navigable rivers, river outflow effects offshore and other non-tidal flows. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.45, November 2000).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
Real World	CURENT (P, A)	CURVEL (M) Current velocity		F
Paper Chart Symbol		ORIENT (M) Orientation		F
ECDIS Symbol				

INT 1 Reference: H 42, 43

10.2.1 Current data (see S-4 – B-408)

The term “current(s)” in this document is used to describe water movements which are generally constant in direction, and are not dependent on astronomical conditions. A current is described by the direction towards which it is running. For tidal streams, see clauses X.X and X.X.

Currents occur as:

- The flow of river water in rivers and estuaries;
- Permanent flows in other restricted waters e.g. İstanbul Boğazı (Bosporus);
- Permanent or seasonal oceanic currents;
- Temporary wind-induced currents.

Only surface currents should be encoded. It is particularly important to depict currents (both the main flows and permanent eddies) which could set a vessel towards dangers.

If it is required to encode a non-gravitational current, it must be done using the feature **CURENT**.

Geo feature: Current (**CURENT**)

Attributes: CURVEL DATEND DATSTA NOBJNM OBJNAM ORIENT
PEREND PERSTA INFORM NINFOM NTXTDS SCAMIN
TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- Maximum rates (velocities) of currents, where known, must be encoded in knots using the attribute CURVEL, and should be quoted to one decimal place. Ideally, the minimum and maximum strengths should be quoted, where known, if the strength varies, using the attribute INFORM, e.g. 2.5 – 4.5kn.
- In tidal waters where the flow of river water alternately reinforces the ebb tidal stream and reduces the flood, the combined effect must be encoded, where required, for the convenience of the navigator, i.e. the combined current must be encoded using the features **TS_FEB** or **TS_PAD** (see clauses X.X and X.X). In restricted waters where tides are negligible, the direction and/or rate of flow should be encoded using **CURENT**.
- Ocean currents are permanent or seasonal, are somewhat variable in strength and direction, and generally cover broad areas. Where required, this information must be encoded using **CURENT**. In cases where the current strength and direction are subject to seasonal variations, this should be indicated using the attributes PERSTA and PEREND. This may require multiple **CURENT** features with attributes populated in

Comment [j108]: MD8 – 8.Co.16

Comment [j109]: MD8 – 8.Co.16

accordance with the seasonal variations to be coincident in the ENC. Where the direction of an ocean current is so variable that it is not practicable to show this information, the attribute **ORIENT** must be populated with an empty (null) value. This may generally occur when the **CURRENT** is encoded as type area.

- Local weather conditions can produce significant temporary wind-induced currents which cannot be charted. If there is a known hazard, e.g. if winds from a particular direction have been found to endanger vessels by setting them on to shoals unexpectedly, a cautionary note may be added using the feature **CTNARE** (see clause X.X). If considered necessary, the note may refer to further information in other publications, such as Sailing Directions.

Distinction: Tidal stream (flood/ebb); tidal stream - harmonic prediction; tidal stream - non harmonic prediction; tidal stream panel data; tidal stream - time series.

10.4 Tidal stream – harmonic prediction

IHO Definition: TIDAL STREAM – HARMONIC PREDICTION. A tidal stream (or tidal current) is an alternating horizontal movement of water associated with the rise and fall of the tide caused by tide-producing forces. (IHO Dictionary – S-32, Edition 5; 1169).

Predicted tidal stream rates may be calculated using parameters (harmonic constituents) and an appropriate harmonic calculation algorithm. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.174, November 2000).

INT 1 Reference: H 40-41

10.5.1 Prediction by non-harmonic methods (see S-4 – B-407.4 and B-408.2)

If it is required to encode parameters for the prediction of tidal streams using time and rate, it must be done using the feature **TS_PNH**.

The reference station to be used for these predictions must be identified using a collection feature (**C_ASSO**) between the stream parameter feature **TS_TIS** or **TS_PRH** of the reference station, and the stream parameter feature **TS_PNH** of the secondary station. If the reference station is not located within the data set or exchange set, then its tidal stream parameters should be supplied as a geo feature with no geometry.

Other non-harmonic methods for predicting tidal stream are not currently supported.

Geo feature: Tidal stream – non-harmonic prediction (**TS_PNH**)

Attribute: NOBJNM OBJNAM T_M TOD T_THDF STATUS INFORM
NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND
SORDAT SORIND

Remarks:

- The feature "tidal stream - non-harmonic prediction" encodes information for use when predicting times and rates for tidal streams by non-harmonic methods. The supplier of any parameters must be consulted on how to use this data, and which calculation algorithms to use with the data.

Distinction: Current – non-gravitational; tidal stream (flood/ebb); tidal stream - harmonic prediction; tidal stream panel data; tidal stream - time series.

10.6 Tidal stream panel data

IHO Definition: TIDAL STREAM PANEL DATA. A tidal stream (or tidal current) is an alternating horizontal movement of water associated with the rise and fall of the tide caused by tide-producing forces. (IHO Dictionary – S-32).

Approximate tidal stream rates may be given as discrete rate values at a specified interval before or after a high water. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.176, November 2000).

10.6.1 Tidal stream panels (see S-4 – B-407 and B-407.2-3)

The term “tidal streams” (French: “courants de mare”, US usage: “tidal currents”), is used to designate the periodical horizontal movements of the water, which are astronomical in origin. These are distinguished from “currents” (French: “courants généraux”), which are not dependent on astronomical conditions. In practice the navigator experiences a combination of tidal stream and current. Tidal streams are defined by the direction towards which they flow. The terms “flood stream” and “ebb stream” are used for designating the horizontal movement of the water when the tide is respectively rising or falling. To avoid any ambiguity, in the case of streams which do not turn at about the time of local high or low water, an indication must be given of the direction towards which the stream flows.

If it is required to encode the information generally shown on paper charts as a tidal stream panel and stations, it must be done using the feature **TS_PAD**.

Tidal stream values encoded in this way should be mean spring rates, i.e. the tidal stream rates associated with a tidal range which is defined as the difference in height between MHWS and MLWS.

11 Depths

11.1 Generalisation of depth portrayal

When a survey or chart is reduced in scale the generalization that is required has several effects:

- a. Deeper soundings tend to be eliminated while the shoaler ones are retained for safety. Sufficient numbers of deeper soundings should be retained to show the full range of depth. This is to assist the navigator who uses their echo sounder to help verify their position, or the mariner choosing an anchorage of suitable depth.
- b. Generalization proceeds by the inclusion of shoals lying to seaward of the principal contour, and by the smoothing of severely indented contours, with the effect of pushing the contours seaward. However, as a shoal which rises steeply from deep water is much more of a hazard than one which rises gradually, the encoder must ensure that the contours are not pushed seaward unduly. If the encoder gives the impression that a mariner will get warning of too close an approach to the danger, by relying on their echo sounder to show gradually shoaling depth - when the danger is, in fact "steep-to" - they may seriously mislead and endanger the ENC user.
- c. With the "expansion" of shoals, described above, it may become increasingly difficult to find space on an ENC cell to show the line of deepest soundings through a channel, or even to show a channel at all. Yet even at small optimum display scales it is important to show the usable channels and indicate their least depth. The encoder may have to make greater use of depth contours than soundings in depicting narrow channels.
- d. Even such dangers as drying rocks and islets require generalization in coastal areas. This is in recognition of the principle that, whereas they are particularly dangerous in isolation and must then be shown as precisely as possible, where they occur in groups a representative depiction is permissible, showing the outermost features as individually as space permits.

11.2 Representation of depth: General

Some of the principles of depth depiction are summarized below:

- a. The least depth over shoals and banks, and over sills (bars) in navigable channels, must be shown. Particular attention should also be paid to full and accurate representation of all other "critical" areas, e.g. on and adjacent to leading lines, controlling depths in fairways and along recommended tracks, in anchorages, alongside jetties, quays and berths and in the entrances to harbours and basins. Maximum as well as minimum depth should be shown where possible, e.g. to show the line of deepest water in narrow channels. However, deeper soundings on the sloping side of a bank near to the crest line should not be selected if they could give the impression that there is a deeper passage across the crest between shoaler soundings.
- b. Soundings and contours must be used to complement each other in giving a reasonable representation of the seabed, including all significant breaks of slope.
- c. The density of soundings should be determined by the type of seabed. Flat or evenly sloping areas, and banks of unconsolidated sediment, should have a minimum of soundings, fairly evenly spaced, but gradually becoming more widely spaced as the depth increases. Irregular bottom topography should be represented by a denser, and probably irregular, pattern of soundings. A steep gradient should be represented by close contours, undistorted by soundings.
- d. In changeable areas, where surveys of different dates adjoin and do not match exactly, gaps in the contours may be left to indicate the discontinuity of depth to the navigator.
- e. Where practicable, soundings on smaller optimum display scale ENCs should be selected from those shown on the larger optimum display scale ENCs.
- f. In areas navigable only at high water, drying heights must be selected according to the same principles as soundings.
- g. Where surveys are inadequate, it may be advisable to omit some of the standard contour lines.

11.3 Sounding

<u>IHO Definition:</u> SOUNDING. A measured water depth or spot which has been reduced to a vertical datum (may be a drying height). (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.163, November 2000).

 INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND
 SORDAT - see Table below
 SORIND

A sounding associated with a rock or coral pinnacle, which is an obstruction to navigation, must be encoded using the feature **UWTROC** (INT1 – K14, see clause X.X) with attribute VALSOU populated with the value of the sounding.

The geometry of soundings is held in a 3 dimensional array (latitude, longitude, depth). In the interests of efficiency, multiple soundings should be encoded in one spatial feature, provided that all the spatial and geo feature attributes are common to the group.

As the sounding multiplication factor (SOMF) for ENC is always 10, soundings must only be encoded to one decimal place of a metre. Drying soundings must be indicated by a negative value.

For soundings surrounded by a danger line, see clause X.X.

Sounding	S-4	INT 1	QUAPOS	QUASOU	Remarks
In true position	412.1	I10		1or <undefined>	Should be encoded using QUAPOS = 10
Out of position on paper chart	412.2	I11 I12		1or <undefined>	Spatial feature must be encoded at the true position. There is no "sounding, out of position" in an ENC.
No bottom found	412.3	I13		5	
Lower reliability	412.4	I14	4	4	
Drying	413	I15		1or <undefined>	Negative value
Doubtful	424.4	I2		3	Existence doubtful should be encoded using STATUS = 18
Reported but not confirmed		I4	8	9	If available, the year of report must be encoded using the attribute SORDAT

Remarks:

- Encoders are advised to use caution when considering the population of EXPSOU = 2 (shoaler than the range of depth of the surrounding depth area) for **SOUNDG** objects, as **SOUNDG** objects will not be displayed when utilising some ECDIS display settings. Where it is considered that a sounding that is shoaler than the range of depth of the surrounding depth area may be a hazard to navigation, encoders should preferably conduct further investigation of source material in order to encode additional depth contour and depth area information more relevant to the sounding. Alternatively, encoders may consider using an alternate feature (e.g. **OBSTRN**) to encode the depth.
- Where **SOUNDG** features are covered by the meta feature **M_SREL** (see clause X.X), the attribute **QUASOU** must not be populated unless different to the value of **QUASOU** populated for the **M_SREL**.

Distinction: Depth area; obstruction; underwater/awash rock; wreck.

11.4 Dredged area

IHO Definition: DREDGED AREA. An area of the bottom of a body of water which has been deepened by dredging. (IHO Dictionary – S-32).

INT 1 Reference: I 24

11.5.1 Swept areas (see S-4 – B-415)

If it is required to encode a swept area, it must be done using the **feature SWPARE**.

Geo feature: Swept area (**SWPARE**)

Attributes: DRVAL1 - swept depth

QUASOU SOUACC TECSOU

INFORM - latest date of sweeping (e.g. Swept in 1998)

NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND

SORDAT SORIND

Spot soundings and depth contours shown in these areas must be encoded using **SOUNDG** and **DEPCNT** features. Attributes QUASOU, SOUACC and TECSOU encoded on **SWPARE** apply to the swept area only. When it is required to encode the quality of spot soundings and depth contours, it must be done using the meta **feature M_QUAL** (see clause X.X).

Even if the area contains no spot soundings or depth contours, a **SWPARE feature** must overlap **DEPARE** or **DRGARE features**. If there is insufficient depth information to allow the attributes DRVAL1 and DRVAL2 to be encoded on a **DEPARE** or **DRGARE feature**, DRVAL1 should be set to the swept depth and DRVAL2 should be set to an empty (null) value.

Remarks:

- When a swept area occupies an entire **M_QUAL area feature** and a **SWPARE feature** is not defined separately, DRVAL1 for the **M_QUAL feature** must be used to encode the swept depth. The attribute SOUACC may be used on the **M_QUAL feature** to specify the accuracy of the swept depth defined by DRVAL1 - the attribute POSACC must not be used. There must be no depth or positional accuracy information provided for any underlying soundings within the swept area.
- When a swept area occupies an entire **M_QUAL area feature** and a **SWPARE feature** is defined separately, the DRVAL1 value encoded on the **M_QUAL feature** must be the same as the DRVAL1 value encoded on the **SWPARE feature**. SOUACC may be used on the **M_QUAL feature** to specify the accuracy of the swept depth - POSACC must not be used. There must be no depth or positional accuracy information provided for any underlying soundings within the swept area.
- When a **SWPARE feature** exists within a **M_QUAL feature**, SOUACC must only be used on the **M_QUAL feature** if the same depth accuracy applies to the swept depth and to the soundings outside the swept area. POSACC must only be used to encode the accuracy of depths falling outside the boundaries of the swept

area. There must be no depth or positional accuracy information provided for any underlying soundings within the swept area.

- **SWPARE features must not overlap.**

Distinction: Depth area; dredged area; unsurveyed area.

Comment [j112]: S-58 test 1782.

11.6 Unsurveyed area

IHO Definition: UNSURVEYED AREA. An area for which no bathymetric survey information is available. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.195, November 2000).

11.7 Depth contour

IHO Definition: **DEPTH CONTOUR.** A line connecting points of equal water depth which is sometimes significantly displaced outside of soundings, symbols and other chart detail for clarity as well as generalization. Depth contours, therefore, often represent an approximate location of the line of equal depth as related to the surveyed line delineated on the source. Also referred to as depth curve. (IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	DEPCNT (L)	VALDCO (M) Value of depth contour		F
<i>Paper Chart Symbol</i>				
<i>ECDIS Symbol</i>				

INT 1 Reference: I 15, 30, 31

11.7.1 Depth contours (see S-4 – B-404.2; B-410; B-411 to B-411.5; B-413 and B-413.1)

The standard series of depth contour lines to be encoded for ENC is: drying line (where tides are appreciable), 2, 5, 10, 15, 20, 30, 50, 100, 200, 300, 400, 500, 1000, 2000 metres, etc. The 2, 5 and/or 15 metre contours may be omitted where they serve no useful purpose, and on smaller optimum display scale ENC data all depth contours to 30 metres (1:1500000 and 1:3000000 optimum display scales) or 200 metres (1:1000000 optimum display scale) should be omitted. It is not necessary for the complete sequence of contours to be shown, e.g. on steep slopes and around isolated pinnacles.

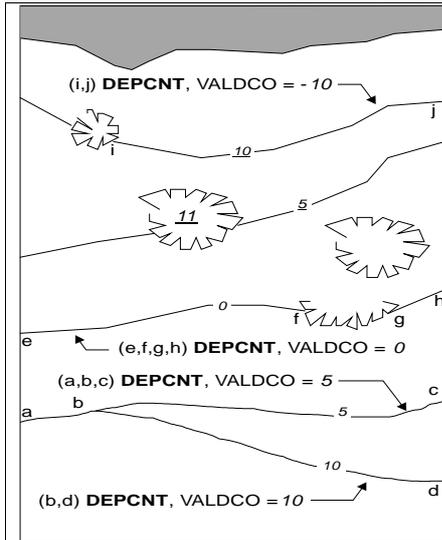

Supplementary contours, e.g. at 3, 8, 25, 40, 75 metres and multiples of 10 or 100 metres may be shown, if the available data permit, to delineate particular bathymetric features where soundings would otherwise be the only depth information over a large area, or for the benefit of particular categories of shipping. The 2500 metre contour may be required for measuring Continental Shelf limits (see UNCLOS Article 76).

On the larger optimum display scale ENC cells, e.g. cells intended for harbour navigation or berthing; or in areas where vessel under keel clearance is critical, a smaller contour interval may be used (e.g. 1 metre) in the depth range suitable for the deepest draught vessels that may navigate in the area.

Geo feature: Depth contour (**DEPCNT**)

Attributes: VALDCO - value of depth contour (negative value for drying contours)
INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT
RECIND SORDAT SORIND

Comment [j113]: TSMAD20
Action.

The boundary of a drying rocky area (see INT1 - J20) or coral reef (see INT1 - J22) may be coincident with the zero metre contour (see 'fg' in Figure). If it is required to encode this boundary, it must be done using the feature **DEPCNT** with the attribute **VALDCO = 0**.

On the source, the presentation of contours in areas of steep slope is sometimes generalised so that closely spaced contours are removed to leave a single contour (see 'ab' in Figure). In such cases, this contour must be encoded using the shallowest depth of the slope.

Wherever possible, contours must be closed, or connected to the border of the cell, a coastline feature or another contour, in order to define closed areas.

Spatial features associated with approximate contours should be encoded using the attribute **QUAPOS = 4 (approximate)**.

Remarks:

Distinction: Coastline; depth area; sounding.

11.8 Depth area

IHO Definition: **DEPTH AREA.** A water area whose depth is within a defined range of values. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.51, November 2000).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

INT 1 Reference:

11.8.1 Depth areas (see S-4 – B-410

The sea area, the intertidal area and the navigable parts of rivers, lakes and canals **must be** divided into depth areas, each of them having a range of depth.

As many depth areas as possible must be created using encoded depth contours.

A **DEPARE** feature of type line may be created at the borders of area features **DEPARE** and **DRGARE** when the limit between the two features does not contain any **COALNE**, **DAMCON**, **DEPCNT**, **GATCON**, **LNDARE** or **SLCONS** features of type line.

Geo **feature:** Depth area (**DEPARE**)

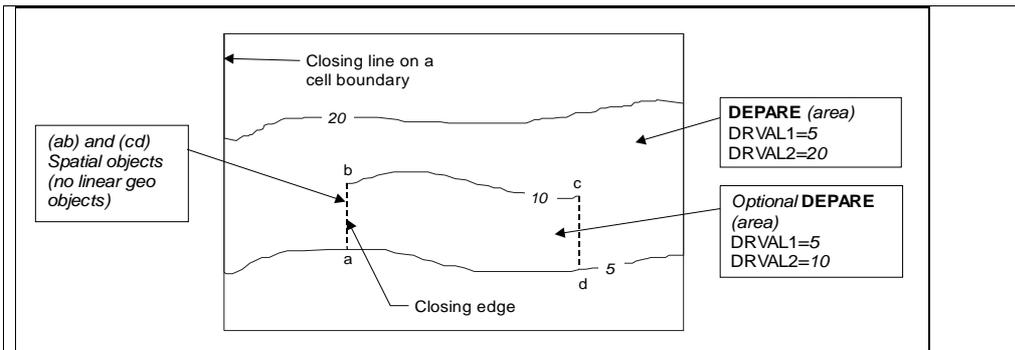

Attributes: DRVAL1 DRVAL2 QUASOU INFORM NINFOM NTXTDS
SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- The value of DRVAL2 for the deepest depth area (**DEPARE**) on the ENC cell should be encoded with the next deepest depth contour from the standard range of depth contours appropriate to the **optimum display scale of the ENC data**, noting that the depth ranges used for adjoining **ENC data** of the same or similar **optimum display scale** must also be considered.
- DEPARE** features of type area are part of Group 1.

11.8.2 Geometry of depth areas

Where areas are not closed on the source, it may be necessary to close these areas using edges without associated line **features**. This is mandatory at the boundary of a cell (see Figure below).

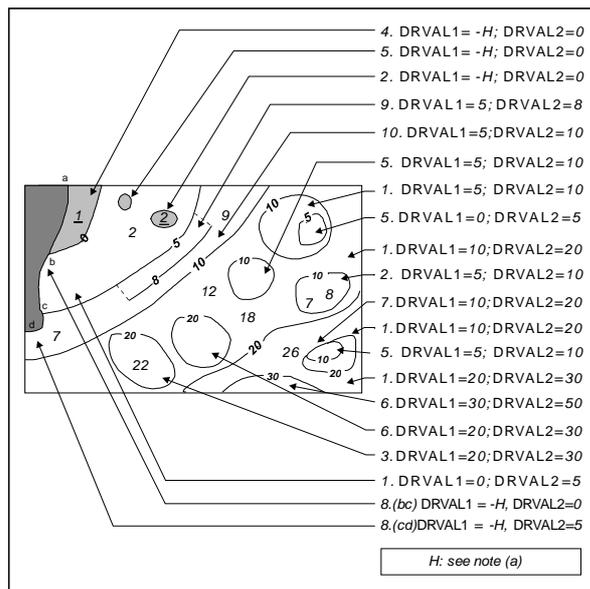

Remarks:

- For short isolated sections of **DEPCNT features** such as (bc), it is up to the producing authority whether to encode the small area (abcd) as a separate **DEPCNT feature** of type area, or to encode only the line (bc) as a floating **DEPCNT feature**.

11.8.3 Use of attributes DRVAL1 and DRVAL2 for depth areas in general

For each depth area of type area, DRVAL1 and DRVAL2 should be encoded with the values corresponding to the shallowest and deepest depths in that area. These values, except for the shallowest and deepest areas, should be chosen from the values of the depth contours encoded in the data set.

A drying area, within which a drying height is indicated without a true position, should be encoded using a **DEPCNT feature**, with DRVAL1 usually set to -H and DRVAL2 set to a data set contour value (usually zero). The drying height should be encoded using the attribute **INFORM** on the **DEPCNT feature** (e.g. *Dries 1.4*).

(a): H = Height of the coastline datum above sounding datum, or a rounded value (e.g. (1) the value of the highest drying contour indicated on the source document; (2) zero, if the coastline datum is the same as the sounding datum).

In the following clauses, the paragraph numbers refer to the item numbers in the above Figure. These clauses cover the most common encoding scenarios; other encoding scenarios are possible.

1. If the depth area is bounded by two or more depth contours:
 DRVAL1 should take the value of the data set depth contour immediately shallower than the value of DRVAL2.
 DRVAL2 should take the value of the deepest depth contour bounding the area.
2. If the deepest depth is shown by a depth contour, and the shallowest depth is shown by a sounding (a shoal):
 DRVAL1 should take the value of the data set depth contour immediately shallower than the value of the sounding or -H.
 DRVAL2 should take the value of the depth contour.
3. If the deepest depth is shown by a sounding and the shallowest depth is shown by a depth contour (a deep):
 DRVAL1 should take the value of the depth contour.
 DRVAL2 should take the value of the data set depth contour immediately deeper than or equal to the value of the sounding.
4. If the shallowest depth is defined by the coastline:
 DRVAL1 should take the value of -H.
 DRVAL2 should take the value of the shallowest data set depth contour bounding the area.
5. If the depth area is bounded by only one depth contour, contains no soundings, and is a shoal:
 DRVAL1 should take the value of the data set depth contour immediately shallower than the value of the depth contour, or -H.
 DRVAL2 should take the value of the depth contour.
6. If the depth area is bounded by only one depth contour, contains no soundings, and is a deep:
 DRVAL1 should take the value of the depth contour.
 DRVAL2 should take the value of the data set depth contour immediately deeper than the value of the depth contour.
9. If the depth area is bounded by an incomplete depth contour on one side (such as in incompletely surveyed area), and a complete depth contour on the other:
 If encoded, DRVAL1 should take the value of the shallowest depth contour.
 If encoded, DRVAL2 should take the value of the deepest depth contour.
 Note: The encoding of this **DEPARE** feature as a separate area is optional - see also preceding Figure.
10. If the depth area is bounded by complete depth contours, but contains an incomplete (floating) depth contour:
 DRVAL1 should take the value of the shallowest depth contour.
 DRVAL2 should take the value of the deepest depth contour.

11.8.4 Bathymetry in areas of minimal depiction of detail on paper charts

Where areas of little or no depth information exist within a specified ENC usage, they should be encoded using one of the following options:

11.8.4.1 Areas of omitted bathymetry

Where larger scale coverage is available, the larger scale charts should be examined to determine the shallowest **DEPARE** feature within the whole of the area. One **DEPARE** feature should then be created, with attributes DRVAL1 and DRVAL2 encoded from the values obtained from the larger scale. **DEPARE** features of type line may be created to join the area of omitted bathymetry with adjoining known **DEPARE** features of type area.

Where larger scale coverage does not exist, a single **DEPARE** feature should be created to cover the area of omitted bathymetry. The DRVAL1 value of the **DEPARE** feature should be set to the shallowest value appropriate to the colour tint that is applied to it (e.g. if blue tint is used for 5-20m areas, the DRVAL1 value for the area of omitted bathymetry should be set to 5). The DRVAL2 value should be set to the shallowest value of the surrounding Group 1 polygons. **DEPARE** features of type line may be created to join the area with adjoining known **DEPARE** objects of type area.

In either case, the areas should be covered by a **CTNARE** feature, the boundary of which follows exactly the surrounding Group 1 features (see clause X.X).

11.8.4.2 Areas of very simplified bathymetry

In these areas, information relating to bathymetry (e.g. depth contours, dangers, rocky areas, isolated rocks, nature of the seabed, dredged areas, unsurveyed areas) should be individually encoded as normal.

A **CTNARE** feature should be created covering the **DEPARE** features of type area, within the area of simplified bathymetry, in order to encode a cautionary note (see clause X.X).

Distinction: Depth contour; dredged area; obstruction; sea area/named water area; sounding; unsurveyed area; wreck.

12 Nature of the Seabed

12.1 Seabed area

IHO Definition: SEABED AREA. An area of the sea where the nature of bottom is homogeneous. The nature of bottom includes the material of which it is composed and its physical characteristics. Also called character (or characteristics) of the bottom, or quality of the bottom. (*Adapted from IHO Dictionary – S-32*).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i> <i>Paper Chart Symbol</i> <i>ECDIS Symbol</i>	SBDARE (P, L, A)	COLOUR (O) Colour	1 : white 2 : black 3 : red 4 : green 5 : blue 6 : yellow 7 : grey 8 : brown 9 : amber 10 : violet 11 : orange 12 : magenta 13 : pink	L
		NATQUA (m) Nature of surface – qualifying terms	1 : fine 2 : medium 3 : coarse 4 : broken 5 : sticky 6 : soft 7 : stiff 8 : volcanic 9 : calcareous 10 : hard	L
		NATSUR (m) Nature of surface	1 : mud 2 : clay 3 : silt 4 : sand 5 : stone 6 : gravel 7 : pebbles 8 : cobbles 9 : rock 11 : lava 14 : coral 17 : shells 18 : boulder	L
		WATLEV (O) Water level effect	3 : always under water/ submerged 4 : covers and uncovers 5 : awash	E

INT 1 Reference: J 1-12, 30-39

12.1.1 Description of the bottom (see S-4 – B-425 to B-427)

The nature (quality) of the seabed (bottom) must be shown in sufficient detail, where known and on the appropriate optimum display scale ENC data, for such purposes as:

- to give some guidance on holding characteristics when anchoring;
- to help in assessing the stability of shoals and to distinguish rocks from unconsolidated material, when navigating in shoal areas;
- to show where vessels may safely take the ground at low water in tidal areas; or
- to give an indication of the nature of the seabed in deeper waters for fishermen and submariners.

If it is required to encode an area of the sea where the nature of the bottom is homogeneous, it must be done using the feature **SBDARE**.

Geo feature:	Seabed area (SBDARE)			
Attributes:	COLOUR	NATQUA	NATSUR	WATLEV
	NOBJNM	OBJNAM	INFORM	NINFOM
	NTXTDS	SCAMIN	TXTDSC	RECDAT
	RECIND	SORDAT	SORIND	

Remarks:

- Generally, it is not possible to define a seabed area by its real extent. For that reason, the characteristics of the seabed area may be represented at one single position.
- In the following clauses, the paragraph prefixes refer to the examples shown in the Figure at right.

(a) Mixed natures: The dominant nature of the seabed should be given first. When there are qualifying terms associated with the various natures of surface, the qualifying terms must be listed in the same order as the nature of surface list. Where a particular nature of surface has no qualifying term, the place in the list must be left empty and a delimiting comma must be encoded. For example, to encode a bottom quality such as fine sand, mud, and broken shells, the attributes NATSUR = 4,1,17 and NATQUA = 1,,4 must be encoded as shown. Where the last nature of surface in a list has no qualifying term, a trailing comma must be encoded. For example, "fine sand and mud" must be encoded with NATSUR = 4,1 and NATQUA = 1,.

(b) Underlying material: Should be encoded in the same way as mixed natures, replacing the comma by a slash (/). The surface layer must be given first, followed by the underlying layers.

(c) Coral reef, which is always covered, represented as an area (INT1 – K16): An **OBSTRN** feature of type area must be encoded with attributes CATOBS = 6 (foul area) and NATSUR = 14 (coral). This feature must be covered by a **DEPARE** or **UNSARE** feature as appropriate. In this area, some point dangers may be shown. An **UWTROC** feature should be encoded for each individual point danger.

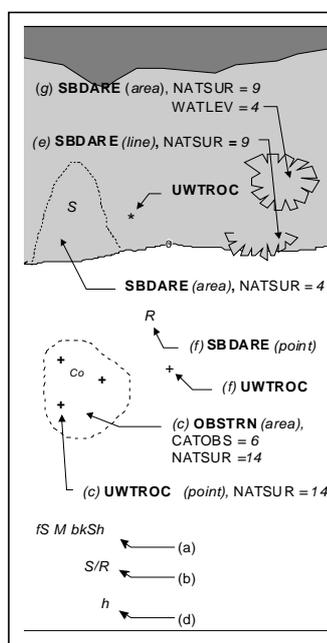

(d) Hard bottom: The attribute NATQUA = 10 (hard) should be encoded, without being associated with NATSUR.

(e) On the source, in the intertidal area or along the drying line, the nature of surface is sometimes shown by an open line rather than a closed area. In such cases, a **SBDARE** feature of type line should be encoded, with attribute WATLEV = 4 (covers and uncovers).

(f) If it is required to encode a rock pinnacle, which is dangerous to navigation, it must be done using the feature **UWTROC**, while a rocky nature of seabed should be encoded using a **SBDARE** feature of type point.

(g) Where a **SBDARE** feature of type area is located in an intertidal area, it should be encoded with WATLEV = 4 (covers and uncovers).

- The nature of the seabed should be shown in a depth of 2000m and less. The nature of the seabed may be

shown in greater depths if thought to be useful.

Distinction: Sandwave; sea area/named water area; weed/kelp.

12.2 Weed/kelp

IHO Definition: WEED/KELP. Seaweed is the general name for marine plants of the Algae class which grow in long narrow ribbons. (International Maritime Dictionary, 2nd Ed.).

Kelp is one of an order (laminariales) of usually large, blade-shaped or vine-like brown algae. (IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<p><i>Real World</i></p>  <p>Seaweed – Eelgrass <i>Photograph, courtesy of the Pacific Hydrographic Branch</i></p>  <p>Kelp <i>Photograph, courtesy of the Pacific Hydrographic Branch</i></p> <p><i>Paper Chart Symbol</i></p> <p><i>ECDIS Symbol</i></p>	<p>WEDKLP (P, A)</p>	<p>CATWED (O) Category of weed/kelp</p>	<p>1 : kelp 2 : seaweed 3 : seagrass 4 : saragasso</p>	<p>E</p>

INT 1 Reference: J 13.1, 13.2

12.2.1 Weed - Kelp (see S-4 – B-428.2)

If it is required to encode marine weed or kelp, it must be done using the **feature WEDKLP**.

Geo feature: Weed / kelp (**WEDKLP**)

Attributes: CATWED NOBJNM OBJNAM INFORM NINFOM NTXTDS
SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND

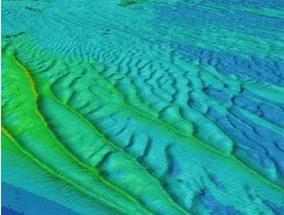

Remarks:

- The presence of kelp is also generally an indication of the presence of submerged rocks.

Distinction: Seabed area; vegetation.

12.3 Sandwaves

IHO Definition: SANDWAVES. Large mobile wave-like sediment feature in shallow water and composed of sand. The wavelength may reach 100 metres; the amplitude may be up to 20 metres. (IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<p><i>Real World</i></p>  <p>Sand Bar <i>Photograph, courtesy of the Pacific Hydrographic Branch</i></p>  <p>Multi-Beam Image of a Sandwave <i>Image, courtesy of the Atlantic Hydrographic Branch</i></p> <p><i>Paper Chart Symbol</i></p> <p><i>ECDIS Symbol</i></p>	<p>SNDWAV (P, L, A)</p>	<p>VERLEN (O) Vertical length</p>		<p>F</p>

INT 1 Reference: J 14

12.3.1 Sandwaves (see S-4 – B-428.1)

Sandwave areas may be dangerous to mariners, as the depth may be less than charted, because surveys are not necessarily conducted at the ideal time for sandwave building. Some research has shown that sandwave mobility is most evident in the vertical plane and high spots may occur on crest lines in response to calm weather, and possibly during particular times within the tidal cycle. It is therefore important to warn the mariner of the presence of sandwaves, and provide them with as much information as is available and can be included in the ENC.

If it is required to encode sandwaves, this must be done using the feature **SNDWAV**.

Geo feature: Sandwaves (**SNDWAV**)

Attributes: VERLEN - amplitude of the sandwave above the bottom
INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT

RECIND SORDAT SORIND

Remarks:

- Care must be taken not to over-generalize depth depiction in sandwave areas, as the typically convoluted contour pattern, and significant depth changes between soundings selected from crests and troughs, help to draw attention to these features. However, this will not usually be sufficient warning, as the variance between crest and trough may fall between standard contours, or the optimum display scale for the ENC data may be insufficient to show the sandwaves individually, or anything but the shoalest soundings. Attention should therefore be drawn to the area by encoding a **SNDWAV** feature. If considered necessary, the nature of any navigational hazard presented by the sandwaves may be incorporated using a note referenced by the attribute TXTDSC.
- Where frequently repeated surveys show variations in least depth, the shoalest soundings obtained over a period of years should be encoded. This blending of details from surveys of differing dates must be done with care; in particular, long-term deepening must not be overlooked.

Distinction: Seabed area.

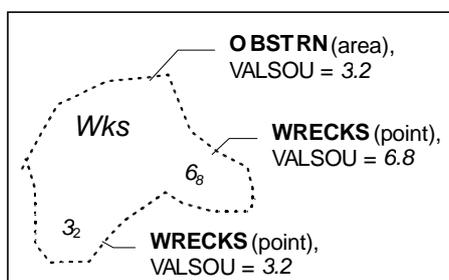

12.4 Springs in the seabed

<u>IHO Definition:</u> SPRING . A natural issue of water or other substances from the earth. One on the bottom of the sea is called a submarine spring. (IHO Dictionary – S-32).				
Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	SPRING (P)			
<i>Paper Chart Symbol</i>				
<i>ECDIS Symbol</i>				
<p><u>INT 1 Reference:</u> J 15</p> <p>12.4.1 Springs in the seabed (see S-4 – B-428.3)</p> <p>Springs in the seabed may cause false echo-soundings. If it is required to encode a spring in the seabed, it must be done using the feature SPRING.</p> <p>Geo feature: Spring (SPRING)</p> <p>Attribute: NOBJNM OBJNAM INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND</p> <p><u>Remarks:</u></p> <p><u>Distinction:</u></p>				

13 Rocks, Wrecks, Obstructions

Full details of all dangers to navigation must be encoded except in those areas for which the ENC is clearly inappropriate for navigation. The fullest possible information on clearance depths must be given irrespective of their depths, in preference to making any arbitrary distinction between “dangerous” and “non-dangerous” depths. This will allow navigators of all classes of vessels, including deep-draught ships and submarines, to make their own assessments of what is dangerous to them.

13.1 Danger line limiting an area of wrecks or obstructions

Area of wrecks

The area enclosed by the danger line must be encoded using **WRECKS** (see clause X.X) or **OBSTRN** (see clause X.X) features of type area, with the attribute values, when encoded, reflecting the characteristics of the shallowest point feature encoded in the area. The area must also be covered by **DEPARE** or **UNSARE** features as appropriate.

If it is required to encode one or more least depths in such an area, it must be done using a point feature for each of the depths, in addition to the area feature.

13.2 Danger line bordering an area through which navigation is not safe (see S-4 – B-420.1)

A danger line, bordering an area through which navigation is not safe, should be encoded using an **OBSTRN** feature of type area, with attribute CATOBS = 6 (foul area).

13.3 Doubtful dangers (see S-4 – B-424)

The fact that a danger is doubtful should be encoded using the feature attributes QUASOU and STATUS and the spatial attribute QUAPOS for the feature:

	S-4	INT 1	QUAPOS	QUASOU	STATUS
Position approximate	424.1	IB7	4		
Position doubtful	424.2	IB8	5		
Existence doubtful	424.3	II1			18
Doubtful sounding	424.4	II2		3	
Reported danger	424.5	II3	7 or 8	8 or 9	

Remarks:

- The same notions of approximate or doubtful positions and doubtful existence also apply to features other than dangers (e.g. landmarks, buoys).
- The text "Discoloured water" on the source indicates the probable existence of shallow water. This should be encoded using a **CTNARE** feature (see clause X.X) with attribute INFORM or TXTDSC containing a cautionary note.

13.4 Land area

<u>IHO Definition:</u> LAND AREA. The solid portion of the Earth's surface, as opposed to sea, water. (IHO Dictionary – S-32).				
Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

13.5.1 Rocks which may cover (see S-4 – B-421.2 to B-421.4)

Full details of all dangers to navigation must be encoded except in those areas for which the ENC is clearly inappropriate for navigation (see S-4 – B-401 and B-402). The fullest possible information on clearance depths must be given irrespective of their depths, where known, in preference to making any arbitrary distinction between “dangerous” and “non-dangerous” depths. This will allow navigators of all classes of vessels, including deep-draught ships and submarines, to make their own assessments of what is dangerous to them.

Underwater rocks may cover and uncover, may be awash, or may be always underwater.

Geo feature: Underwater / awash rock (**UWTROC**)

- Attributes:
- EXPSOU - indicates features with a “value of sounding” within or not within the range of depth of the surrounding area
 - NATQUA NATSUR NOBJNM OBJNAM
 - QUASOU - see Table below.
 - SOUACC - see use of the meta feature **M_QUAL** (clause X.X)
 - STATUS - 18 - existence doubtful
 - TECSOU
 - VALSOU - see Table below.
 - WATLEV - see Table below.
 - INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT
 - RECIND
 - SORDAT - year of report, for reported but not confirmed danger
 - SORIND

Rock or coral reef	INT 1	WATLEV	QUASOU	Comment
Covers and uncovers, depth unknown	K11	4	2 or <undefined>	
Covers and uncovers, depth known	K11	4	any value except 2 or 5, or <undefined>	Negative value for VALSOU
Awash	K12	5		
Underwater rock, depth unknown	K13	3	2 or	

			<undefined>	
Underwater rock, depth known	K14	3	any value except 2 or 5; or <undefined>	
Reported, not confirmed	I3.1,3.2	3,4 or 5	9	If available, the year reported should be encoded in SORDAT. The attribute QUAPOS should be set to 8 (reported, not confirmed).

Comment [j118]: S-58 Check 1657.

Remarks:

- All **UWTROC features** should be encoded using one of the above combinations of attributes.
- A rock represented by a spot sounding and an associated nature of seabed (underwater rock not dangerous to surface navigation) *should* be encoded using a single **UWTROC feature**, with the sounding value encoded using the attribute VALSOU. Where **UWTROC** is encoded, there must be no **SOUNDG** feature encoded coincident.
- For area rock features, see clause X.X.
- When a group of rocks is surrounded by a danger line, each rock should be encoded as a separate **UWTROC feature** covered by an obstruction area feature (**OBSTRN**).

Distinction: Obstruction; seabed area; sounding; wreck.

13.6 Wrecks

IHO Definition: WRECKS. The ruined remains of a stranded or sunken vessel which has been rendered useless. (IHO Dictionary – S-32).

13.6.1 Wrecks (see S-4 – B-422, B-422.1 to B-422.8 and B-449.5)

Wrecks must be encoded to whatever depth they are considered to be of interest, also taking account of the needs of submarines and fishing vessels where appropriate, but not generally in water deeper than 2000m. (Trawling regularly takes place in depths of 400m and occasionally in depths as great as 2000m).

If it is required to encode a wreck, it must be done using the feature **WRECKS**.

Geo feature: Wreck (**WRECKS**)

- Attributes:
- CATWRK - see Table below
 - CONRAD CONVIS
 - EXPSOU - indicates objects with a "value of sounding" within or not within the range of depth of the surrounding area
 - HEIGHT - only if WATLEV = 1 or 2
 - NOBJNM OBJNAM
 - QUASOU - see Table below
 - SOUACC - see use of the meta object **M_QUAL** (clause X.X)
 - STATUS
 - TECSOU - see Table below
 - VALSOU
 - WATLEV - see Table below
 - INFORM NINFOM NTXTDS SCAMIN PICREP TXTDSC
 - RECDAT RECIND SORDAT SORIND

In the following table, the symbol '/' indicates that this attribute must not be encoded. A blank indicates that the encoder may choose a relevant value for the attribute.

Wrecks...	M4	INT 1	CATWRK	WATLEV	QUASOU	TECSOU
Showing any part of hull or superstructure	422.2	K24 K20	5	1,2 or 4	/	/

Covers and uncovers	422.2	K24 K21	4 or 5	4		
Awash				5		
The mast only is visible at high water	422.5	K25	4 or 5	2	/	/
The mast only is visible at low water	422.5	K25	4	4		
Measured depth	422.4	K26	1 or 2	3	1, 6 or <undefined>	
Depth measured and swept by wire drag	422.3	K27	1 or 2	3	6	6
Depth unknown, considered dangerous by the responsible producing authority	422.5	K28	2	3	2* or <undefined>	/
Depth unknown, not considered dangerous by the responsible producing authority	422.6	K29	1	3	2* or <undefined>	/
Depth unknown, with a safe clearance	422.7	K30	1 or 2	3	7	/
Distributed remains of wreck	422.8	K31	3			
Reported, not confirmed	424.5	I3.1,3.2			9	

All wrecks should be encoded using one of the above combinations of attributes.

* For a wreck where the least depth is unknown, the attribute value 2 (depth unknown) does not apply to the depth of the sea bottom near the wreck.

Comment [j121]: MD8 – 4.CL9.

13.6.1.1 Where a wreck is shown with its true shape (large scale ENCs) (see S-4 – B-422.1)

Soundings and heights are often given inside a wreck to show the highest points of the hull or superstructure (e.g. mast, funnel). If it is required to encode such features, they must be done using:

- A **WRECKS** feature of type area with all populated attributes applying to the highest point of the wreck.
- **LNDELV** features of type point to encode the features of the wreck that are always dry; the type of each feature (e.g. mast, funnel) may be encoded using the attributes INFORM and NINFOM.
- **SOUNDG** features to encode the features of wrecks which are always submerged, or cover and uncover; the type of each feature (e.g. mast, funnel) may be encoded using INFORM and NINFOM, which means that these soundings must be encoded individually.

13.6.1.2 Changing criteria for wrecks

Historically the criteria used for differentiating between “dangerous” and “non-dangerous” wrecks were often based on a threshold value for the estimated depth over the wreck (e.g. 20m, 28m). Criteria have varied between nations and over time (due to the increasing draught of large vessels). The term “non-dangerous wreck” may be applied even though a wreck may be dangerous to some vessels capable of navigating in the vicinity. Unfortunately, the mariner is not necessarily aware of that fact or that, due to the changing criteria, wrecks encoded as “non-dangerous” may have different meanings. Ideally, therefore, all encoded “dangerous” and “non-dangerous” wrecks having no known depth should be re-assessed to conform to the guidance provided in S-4 – B-422.

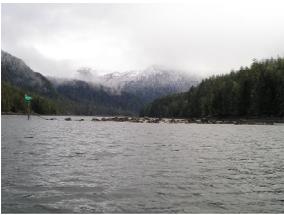

Remarks:

- A **WRECKS** feature of type area must be covered by an area feature from Group 1 as appropriate.
- To give the mariner the maximum useful information, the least depth over a wreck (or, if unknown, an estimated safe clearance) must be encoded, using the attribute VALSOU, in addition to populating the attribute CATWRK, where possible. For wrecks visible or partly visible at sounding datum, the height or drying height should be encoded, if known. This helps to distinguish wrecks which are always visible from wrecks which are only visible at low tide.
- If it is required to encode a wreck in water less than 200 metres deep whose true depth is unknown, but for which there is a safe clearance depth, it must be done using the attribute VALSOU and the attribute QUASOU = 7 (least depth unknown, safe clearance at value shown).

Distinction: Depth area; hulk; obstruction; sounding; underwater/awash rock.

13.7 Obstructions

IHO Definition: OBSTRUCTION. In marine navigation, anything that hinders or prevents movement, particularly anything that endangers or prevents passage of a vessel. The term is usually used to refer to an isolated danger to navigation. (IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

INT 1 Reference: K 1, 31, 40-43, 46; L 21, 23; Q 42

13.7.1 Obstructions and foul areas (see S-4 – B-327.5, B-420.1, B-422.8-9, B-431.6, B-445.1 and B-447.5)

Full details of all dangers to navigation must be encoded except in those areas for which the ENC is clearly inappropriate for navigation (see S-4 – B-401 and B-402). The fullest possible information on clearance depths must be given irrespective of their depths, where known, in preference to making any arbitrary distinction between “dangerous” and “non-dangerous” depths. This will allow navigators of all classes of vessels, including deep-draught ships and submarines, to make their own assessments of what is dangerous to them.

If it is required to encode snags, stumps, wellheads, diffusers, cribs, fish havens, foul areas, *foul grounds*, booms, ice booms, *sites of cleared platforms* or ground tackle, it must be done using the *feature OBSTRN*.

- Geo *feature*: Obstruction (**OBSTRN**)
 Attributes: CATOBS CONDTN
 EXPSON - indicates objects with a “value of sounding” within or not within the range of depth of the surrounding area
 HEIGHT - only if WATLEV = 1 or 2
 NATCON NATQUA NATSUR NOBJNM OBJNAM
 PRODC - only used for wellheads
 QUASOU - see Table below
 SOUACC - see use of the meta object **M_QUAL** (clause **X.X**)
 STATUS
 TECSOU - see Table below
 VALSOU
 VERLEN - distance above the seabed
 WATLEV - see Table below
 INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT
 RECIND SORDAT SORIND

In the following table, the symbol ‘/’ indicates that this attribute must not be encoded. A blank indicates that the encoder may choose a relevant value for the attribute.

Obstruction...	INT 1	WATLEV	QUASOU	TECSOU
Depth unknown	IK40	3 or 4	2* or <undefined>	/
Least depth known	IK41	3 or 4	1 or 6	
Swept by wire to the depth shown	IK42	3	6	6

All obstructions should be encoded using one of the above combinations of attributes.

* For an obstruction where the least depth is unknown, the attribute value 2 (depth unknown) does not apply to the depth of the sea bottom near the obstruction.

Comment [j124]: MD8 – 4.C1.9.

Remarks:

- The minimum depth or maximum authorised draught, if known, over any obstruction, must be encoded using the attribute VALSOU, if known.
- If the nature of a dangerous underwater *feature*, dangerous underwater area, or floating feature is not explicitly known, it must be encoded using **OBSTRN**.
- An **OBSTRN** *feature* of type area must be covered by an area *feature* from Group 1 as appropriate.
- An area containing numerous dangers, through which navigation is not safe at the optimum display scale for the ENC data, should be encoded using an **OBSTRN** *feature* of type area, with attribute CATOBS = 6 (foul area).
- A danger circle on a paper chart that surrounds a single symbol or sounding (e.g. INT1 – K26, K27, K40(b) or

shape of the feature, it should be encoded using **WRECKS** or **OBSTRN features** of type area. A single sounding enclosed by a danger circle must be encoded using an **OBSTRN feature** of type point. The sounding value, in this case, must be encoded using the attribute VALSOU, with the attribute EXPSOU populated only if shoaler than or equal to the range of depth of the surrounding area.

- Platforms which have been cut-off above the seabed must be encoded as **OBSTRN**, with attribute CATOBS = 7 (foul ground).
- In certain circumstances where an obstruction is always dry (e.g. cribs), it may be covered by a **LNDARE feature**.
- Vessels deliberately sunk to form fish havens should be encoded as a **WRECKS feature** (see clause X.X).

Distinction: Depth area; fishing facility; marine farm/culture; underwater/awash rock; water turbulence; wreck.

13.8 Fishing facility

IHO Definition: **FISHING FACILITY.** A structure **in shallow water** for fishing purposes which can be an obstruction to ships in general. The position of these structures may vary frequently over time. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.70, November 2000).

Comment [j125]: MD8 – 8.CL3 and 8.Co.4

Comment [j126]: S-57 Extension 06/01.

INT 1 Reference: K 44, 45

13.8.1 Fishing facilities (see S-4 – B-447 and B-447.1-3)

Fishing facilities are usually sited in shallow water, but tunny nets are often located in deeper water. They can be very large and extend up to several miles offshore; and form an obstruction to navigation.

If it is required to encode a fishing facility it must be done using the **feature FSHFAC**.

Geo feature: Fishing facility (**FSHFAC**)

Attributes: CATFIF NOBJNM OBJNAM PEREND PERSTA STATUS
 VERLEN - height of the feature above the seabed
 INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT
 RECIND SORDAT SORIND

Remarks:

- It is recommended that if **FSHFAC** features are considered to be an obstruction or hazard to navigation, they should also be encoded with an **OBSTRN** feature. Although this is contrary to ENC encoding principles (i.e. double encoding), this solution is recommended for portraying dangers to navigation of this nature.

Distinction: Marine farm/culture; obstruction.

Comment [j127]: ENC EB
No. XX

13.9 Marine farm/culture

IHO Definition: MARINE FARM/CULTURE. An assemblage of cages, nets, rafts and floats or posts where fish, including shellfish, are artificially cultivated. Also called fish farm. (IHO Dictionary – S-32).

INT 1 Reference: K 47, 48

13.9.1 Marine farms (see S-4 – B- 447.4 and B-447.6)

Marine farms are collections of cages, nets, rafts and floats, or posts, where fish, including shellfish, are reared. They may obstruct navigation, and are likely to be marked by buoys and possibly lights. They are not always confined to inshore locations. Shellfish beds are found in shallow water. Dependant on vessel draught and tidal range, it is usually possible to navigate over them, at high water, but they can be damaged by vessels anchoring or grounding on them.

If it is required to encode a marine farm, it must be done using the feature **MARCUL**.

Geo feature: Marine farm / culture (**MARCUL**)
 Attributes: CATMFA DATEND DATSTA EXPSOU NOBJNM OBJNAM
 PEREND PERSTA QUASOU RESTRN SOUACC STATUS
 VALSOU
 VERLEN - height of the feature above the seabed
 WATLEV INFORM NINFOM NTXTDS SCAMIN TXTDSC
 RECDAT RECIND SORDAT SORIND

Remarks:

- When it is required to encode the minimum depth of the feature, the attributes EXPSOU and QUASOU and

the mandatory attribute VALSOU must be used. When a **MARCUL feature** covers an area of the seafloor at the **optimum display scale of the data**, the value of the attribute VALSOU represents the minimum depth, if known, over any structure used to form or support the marine farm, or within the area of the marine farm itself. The mandatory attribute WATLEV must be used to encode the water level of the shallowest section of the area, if partly or completely under water.

- Where required, ground tackle associated with marine farms must be encoded as **OBSTRN features** (see clause X.X).

Distinction: Fishing facility; obstruction.

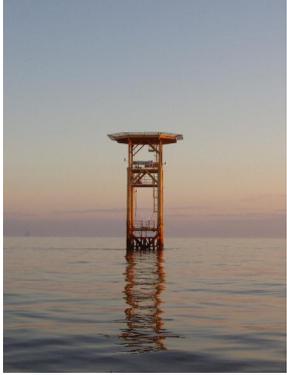

14 Offshore Installations

14.1 Offshore platform

INT 1 Reference: L 2, 10-15, 17

14.1.1 Offshore platforms (see S-4 – B-445.2, B-445.4 and B-445.5)

Several different types of platforms are in use. They are normally piled steel or concrete structures, the latter held in position on the sea floor by gravity. Tension Leg Platforms (TLP) consist of semi-submersible platforms secured to flooded caissons on the sea floor vertically below them by wires kept in tension by the buoyancy of the platform.

Platforms may serve a number of purposes. They may carry any of the following equipment: drilling and production equipment; oil and gas separation and treatment plants; pump-line stations; and electricity generators. They may be fitted with cranes, a helicopter landing deck, and accommodation for up to 350 people. Platforms may stand singly or in groups connected by pipelines. Some stand close together in a complex, with bridges and underwater cables connecting them. Unwanted gas or oil is sometimes burnt from a flaring boom extending from the platform or from a nearby flare stack.

If it is required to encode a permanent offshore platform, it must be done using the feature **OFSPLF**.

Geo feature: Offshore platform (**OFSPLF**)

Attributes: CATOFF COLOUR COLPAT CONDTN CONRAD CONVIS
 DATEND DATSTA
 HEIGHT - for fixed platforms, referred to the vertical datum (see clause 2.1.2)
 NATCON NOBJNM OBJNAM PRODCO STATUS

VERLEN - for floating platforms, referred to the sea level

<i>ECDIS Symbol</i>				
<p>INT 1 Reference: L 30.1, 31.1, 32; Q 42</p> <p>14.2.1 Submarine cables (see S-4 – B-443; B-443.1-2 and B-443.7-8)</p> <p>Submarine cables are used to carry power or telecommunications. All power cables and most telecommunication cables carry dangerous voltages. Submarine cables are potential hazards to both vessels and life, particularly to fishing vessels engaged in trawling the seabed. Where possible, submarine cables are now buried beneath the sea floor in water depths of less than 1000 metres; however there remains a large percentage unburied. Submarine cables are vulnerable to damage from anchoring, trawling or other seabed operations; even small craft anchors can penetrate a soft seabed sufficiently to foul a cable. Damage to telecommunication cables can lead to extensive disruption of national and international communications, whilst damage to power cables can disrupt electricity supply.</p> <p>Submarine cables, including disused cables, should be encoded to indicate their presence to vessels engaged in anchoring, trawling or seabed activities in order to:</p> <ul style="list-style-type: none"> Warn mariners of the potential hazard to their vessel, including electric shock to any vessel fouling or breaking the cable, possible capsizing of a small vessel if its fishing gear or anchor is trapped under the cable, or loss of gear (trawls or anchor cables). Prevent damage to the cable and avoid disrupting the service the cable may be providing. <p>Active cables should be encoded to a depth of 2000 metres (which is the deepest depth of water to which vessels may be endangered by fouling the cable).</p> <p>If it is required to encode a submarine cable, it must be done using the feature CBLSUB.</p> <p>Geo feature: Cable, submarine (CBLSUB)</p> <p>Attributes: BURDEP - if the buried depth varies along the cable, the cable must be encoded as several features.</p> <p>CATCBL COND TN DATEND DATSTA DRVAL1 - shallowest depth over the cable DRVAL2 - deepest depth over the cable NOBJNM OBJNAM STATUS INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND</p> <p>Remarks:</p> <ul style="list-style-type: none"> Where a cable is disused, it should be encoded with the attribute STATUS = 4 (not in use), and the attribute CATCBL should not be encoded. Few disused cables are recovered and so to encode them all would lead to clutter in the data. Also, accurate records of their positions are likely to be incomplete (some cables having been cut or dragged out of position), so there is a case for encoding them very selectively. Where disused cables traverse possible anchorages or where there is known seabed activity, e.g. trawling grounds, they should be encoded on the largest optimum display scale ENC data covering the area, provided they do not obscure more important information. In certain circumstances, high voltage power cables may cause a deviation in a ship's magnetic compass; in these cases, where reports have been received, they should be treated as local magnetic anomalies (see clause X.X). Cables, buried so deep that they are not vulnerable to damage from anchoring, should not be encoded (so that mariners are not unnecessarily inhibited from anchoring or fishing). In marginal cases they may be encoded as CBLSUB with the nominal depth to which they are buried encoded using the attribute BURDEP. <p>Distinction: Cable, overhead; cable area.</p>				

14.3 Submarine cable area

IHO Definition: **CABLE AREA.** An area in which cables have been laid underwater or buried beneath the seabed. Cable area is an area which contains one or more submarine cables. (IHO Dictionary – S-32).

INT 1 Reference: D 29; L 40.1, 41.1, 42, 44

14.4.1 Pipelines, submarine or on land (see S-4 – B-377; B-444; B-444.1-2; B-444.4-5 and B-444.7)

Submarine pipelines can be divided into two main categories:

- Oil, chemical, gas and water supply pipelines are an important feature of many areas. The pipes are generally encased in concrete for protection and to give them negative buoyancy, which can significantly increase their external diameter. Pipelines are generally laid directly on the seabed, with sections over local dips or hollows being supported physically from beneath. In some cases (e.g. in shallow water or near the shore), where the external diameter of the pipeline would represent a significant reduction in the water depth above it, the pipelines may be laid in trenches and possibly buried. In all cases it must be assumed that the pipes are vulnerable to damage from anchoring or trawling, although in a few cases concrete domes are used to protect particularly vulnerable junctions. Gas pipes present a severe hazard to ships damaging them (by fire, explosion, or possibly loss of buoyancy). Oil and chemical pipes are a danger to the environment if fractured. Damage to water pipes supplying residential areas, mainly islands, results in disruption or contamination of the water supply. In the above cases, submarine pipelines must be encoded on all appropriate optimum display scale ENC cells.
- Outfalls and intakes such as sewers, and cooling water intakes, are mainly a feature of inshore waters. For small craft, in particular, such pipes are a potential danger to navigation. The pipes are also vulnerable to damage. They should be encoded on at least the largest optimum display scale ENC cells.

If it is required to encode a submarine or land pipeline, it must be done using the feature **PIPSOL**.

Geo feature: Pipeline, submarine / on land (**PIPSOL**)

Attributes: BURDEP - if the buried depth varies along the pipeline, the pipeline must be encoded as several features
 CATPIP CONDTN DATEND DATSTA
 DRVAL1 - shallowest depth over the pipeline
 DRVAL2 - deepest depth over the pipeline
 NOBJNM OBJNAM PRODC T RESTRN STATUS VERLEN
 INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT
 RECIND SORDAT SORIND

Remarks:

- Where a pipeline is disused, it should be encoded with the attribute STATUS = 4 (not in use), and the attributes CATPIP and PRODC T should not be encoded.
- Submarine pipes, buried so deep that they are not vulnerable to damage from anchoring, should not be encoded (so that mariners are not unnecessarily inhibited from anchoring or fishing). In marginal cases they may be encoded as **PIPSOL** with the nominal depth to which they are buried encoded using the attribute BURDEP.
- Buried pipelines on land should not be encoded.

Distinction: Pipeline area; pipeline, overhead.

14.5 Submarine pipeline area

IHO Definition: PIPELINE AREA. An area containing one or more submarine pipelines. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.118, November 2000).

14.6.1 Offshore production areas (see S-4 – B-445.3 and B-445.9)

Oil and gas fields are exploited in many parts of the world. Although the basic methods for extracting oil and gas are well established, details of the systems and structures may vary with the characteristics of the different fields and are continually being developed. In a typical field, oil or gas is obtained from wells drilled from fixed production platforms, usually standing on the seabed. From each production platform, the oil or gas is carried in pipes to a facilities platform where primary processing, compression and pumping are carried out. The oil or gas is then transported through pipelines to a nearby storage tank, tanker loading buoy or floating terminal, or direct to a tank farm on shore. One facilities platform may collect the oil or gas from several production platforms, and may supply a number of tanker loading buoys or storage units. Such facilities platforms are sometimes termed Field Terminal Platforms. Converted tankers or purpose-built vessels are often permanently moored and used as facilities platforms, floating terminals, and for storage.

Other offshore energy production facilities include wind turbines and underwater current turbines. Other methods of harnessing tidal and wave energy are also in use.

If it is required to encode an offshore production area, it must be done using the feature **OSPARE**.

Geo feature: Offshore production area (**OSPARE**)

Attributes: CATPRA CONDTN CONRAD CONVIS DATEND DATSTA
 HEIGHT NOBJNM OBJNAM PRODC T RESTRN STATUS
 VERLEN INFORM NINFOM NTXTDS SCAMIN TXTDSC
 RECDAT RECIND SORDAT SORIND

Remarks:

- Where groups of offshore wind turbines or underwater turbines exist they should preferably be encoded individually, using the feature **OFSPLF** (see clause X.X). Where optimum display scale for the data or available information does not permit this, then the area covered by the turbines should be encoded using **OSPARE**.

Distinction: Offshore platform; Exclusive Economic Zone.

15 Tracks and Routes

15.1 Leading, clearing and transit lines and recommended tracks (see S-4 – B-433)

If it is required to encode leading, clearing and transit lines and recommended tracks, it must be done using the features **NAVLNE** and **RECTRC**, and related point navigational aids features. This applies for visual and radio navigational aids.

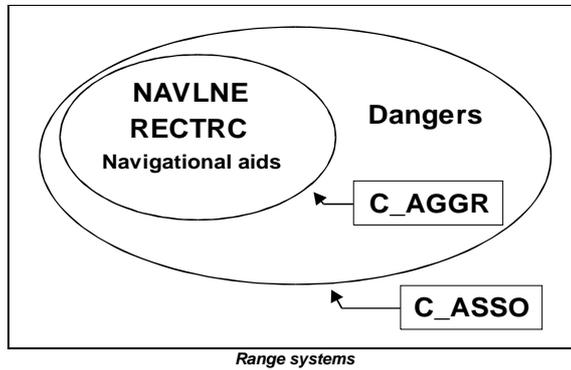

Relationships should be defined between these features (see clauses X.X and X.X).

NB. In North America the word 'range' is used instead of 'transit' and 'leading line'.

15.1.1 Range systems - relationship

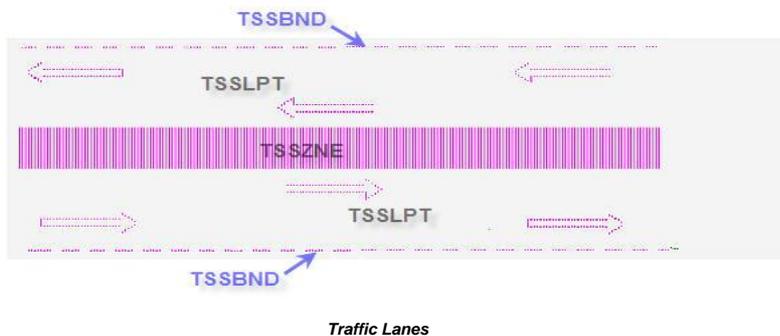

To encode a range system, the features **NAVLNE**, **RECTRC** and the navigational aids features should be aggregated using a collection feature **C_AGGR** (see clause XX).

This aggregation feature may also be associated, using a collection feature **C_ASSO** (see clause XX), with the dangers (e.g. **OBSTRN**, **WRECKS**, **UWTROC** features) marked by the clearing or transit line.

15.2 Traffic Lanes

A traffic lane is an area within defined limits in which one-way traffic is established. Arrows are shown in the traffic lanes to indicate the direction of traffic flow. These lanes of travel are composed of the following objects: **TSSLPT** (traffic separation scheme lane part) and **DWRTPT** (Deep Water route part).

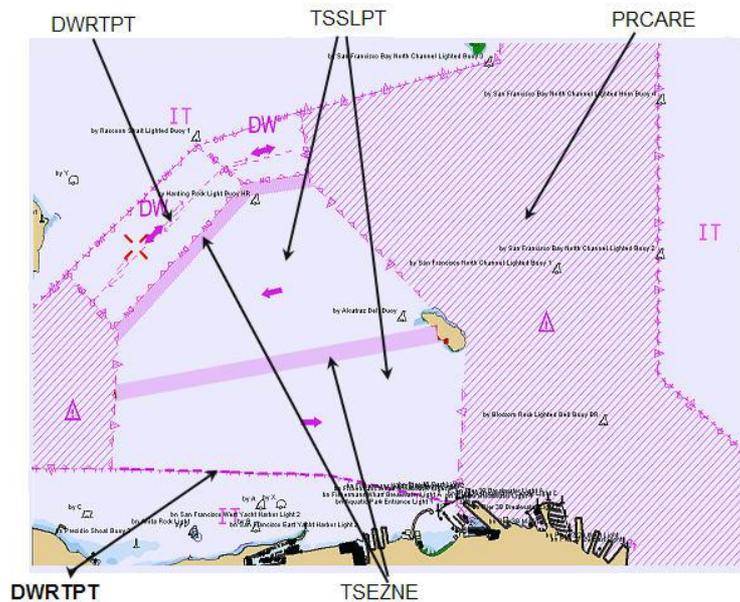

15.3 Traffic separation scheme systems

A traffic separation scheme is a routing measure which separates opposing streams of marine traffic by the establishment of separation zones or lines and traffic lanes. It may include inshore traffic zones or Deep Water routes. A separation zone or line separates:

- 1) The traffic lanes in which ships are proceeding in opposite or nearly opposite directions,
- 2) Separates a traffic lane from the adjacent sea area, or
- 3) Separates traffic lanes designated for particular classes of ships proceeding in the same direction.

To encode a traffic separation scheme (TSS) system, the **DWRTCL**, **DWRTPT**, **ISTZNE**, **PRCARE**, **TSELNE**, **TSEZNE**, **TSSBND**, **TSSCRS**, **TSSLPT**, **TSSRON** features, and the navigational aids features (if they are stated in the regulation defining the TSS or Deep Water route), must be aggregated using the collection feature **C_AGGR** (see clause XX). The attribute **OBJNAM** for the **C_AGGR** feature is used to encode the name of the TSS, and the attribute **INFORM** or **TXTDSC** should be used to encode textual information about the whole TSS.

Sample Traffic Separation Scheme (TSS) and Deep Water route (DW)

15.4 Navigation line

IHO Definition: NAVIGATION LINE. A straight line extending towards an area of navigational interest and generally generated by two navigational aids or one navigational aid and a bearing. (Service Hydrographique et Oceanographique de la Marine, France).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
Real World	NAVLNE (L)	CATNAV (M) Category of navigation line	1 : clearing line 2 : transit line 3 : leading line bearing a recommended track	E
Paper Chart Symbol		ORIENT (M) Orientation		F
ECDIS Symbol		STATUS (O) Status	1 : permanent 2 : occasional 5 : periodic/intermittent 7 : temporary 8 : private 14 : public	L

INT 1 Reference: M 1-2; Q 122

15.4.1 Navigation lines (see S-4 – B-433)

Clearing Lines are important in rocky areas where dangers are not guarded by buoys and where sailing vessels (which are not always able to keep to a direct track) and other small craft may navigate close inshore. Transits marking isolated dangers are based on beacons or other marks which are erected on shore to indicate (approximately, unless there are two pairs of beacons) the position of an isolated danger. Leading lines based on beacons or lights must be encoded where the optimum display scale for the ENC data permits. Leading lines based on natural objects should be encoded on the largest optimum display scale ENC data where they appear to be useful, particularly if other navigational aids seem inadequate.

If it is required to encode a navigation line, it must be done using the feature **NAVLNE**.

Geo feature: Navigation line (**NAVLNE**)

Attributes: **CATNAV** DATEND DATSTA
ORIENT - value of the bearing from seaward
PEREND PERSTA STATUS
INFORM - legend as shown on the source
NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND
SORDAT SORIND

The use of **NAVLNE** and **RECTRC** is defined in more detail in the following Table, and in the Figure below:

Figure		NAVLNE	RECTRC	Navigational aids
1	Recommended track on a leading line	CATNAV = 3	CATTRK = 1	at least 2
2	Clearing line on marks in line	CATNAV = 1	none	at least 2
3	Transit line on marks in line	CATNAV = 2	none	at least 2
4	Recommended track on a bearing	CATNAV = 3	CATTRK = 1	1
5	Clearing line on a bearing	CATNAV = 1	none	1
6	Transit line on a bearing	CATNAV = 2	none	1

7	Recommended track not based on fixed marks	none	CATTRK = 2	none
---	--	------	------------	------

<p>Two navigational aids</p>	<p>Two navigational aids</p>
<p>One navigational aid</p>	<p>One navigational aid</p>
<p>No navigational aid</p>	

Remarks:

- The extent of the navigation line depends on the visibility of the navigational aids.
- The recommended track is that portion of a navigation line that a ship should use for navigation.

15.4.2 Measured distances (see S-4 – B-458)

If the track to be followed is on a leading line or a bearing, it must be encoded in the way described in the Table and Figure above (cases 1 or 4). If the track is not on a leading line or bearing, it must be encoded only as a **NAVLNE feature** with the attribute CATNAV being set to an empty (null) value. In either case, if it is required to encode the measured distance, it must be done using the attribute INFORM (e.g. *Measured distance = 1450 metres*).

If it is required to encode the transit lines, they must be done using **NAVLNE features**, with CATNAV = 2 (transit line).

If it is required to encode the beacons, they must be done using **BCNSPP features**, with attribute CATSPM = 17 (measured distance mark).

On occasions, one or more of the transits used for the measured distance may incorporate an existing landmark as the front or rear mark. In this case, if **LNDMRK** is encoded, CATSPM = 17 must also be populated.

Where the entire measured distance system exists within a single cell, each transit line with its beacons must be aggregated into a collection feature **C_AGGR** (see clause X.X). These two aggregation features and the track to be followed must be aggregated into another **C_AGGR** feature.

Remarks:

Distinction: Recommended route; recommended track.

Comment [j142]: MD8 – 8.Co.1(???)

15.5 Recommended track

IHO Definition: **RECOMMENDED TRACK**. A track recommended to all or only certain vessels. (IHO Dictionary – S-32).

Comment [j143]: MD8 – 4.Co.11 and 4.CL9.

INT 1 Reference: M 3-6

15.5.1 Recommended tracks (see S-4 – B-432.1; B-434 and B-434.1-4)

Recommended tracks and fairways usually comprise a number of sections (sometimes termed 'legs') which

lead between dangers lying close on both sides of the track or fairway. Tracks commonly include some sections which are leading lines (see clause X.X). The distinction between tracks and fairways, in this context, is that tracks have no specified outer limits and fairways do have specified outer limits.

It is important to recognise that it is not the role of cartographers to create “recommended” tracks and other “recommended” routing measures; such recommendations are made by other authorities. The word “Recommended”, used in connection with recommended tracks and other recommended routing measures usually implies that it has been recommended by a competent authority (such as a port authority within its port limits or a maritime safety authority) and may be adopted by IMO. Occasionally, the recommendation may be based on advice directly from a competent surveyor or established by precedent.

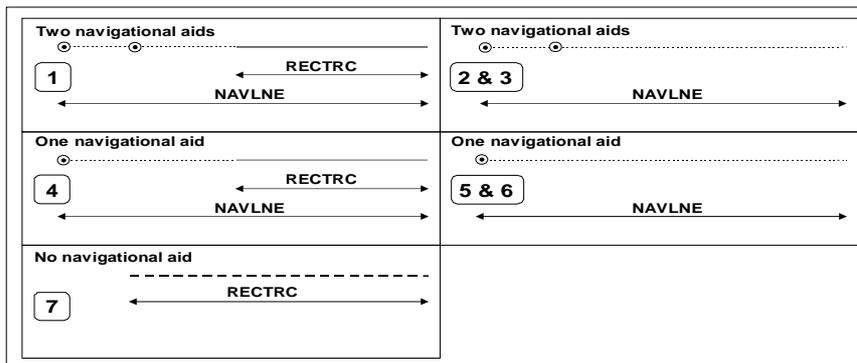

Recommended tracks include all channels recommended for hydrographic reasons to lead safely between shoal depths. The use of such tracks is generally left to the discretion of the mariner and will depend on the vessel's draught, the state of the tide, adequacy of navigational aids and so on.

If it is required to encode a recommended track, it must be done using the feature **RECTRC**.

Geo feature: Recommended track (**RECTRC**)
 Attributes: **CATTRK** **DATEND** **DATSTA**
DRVAL1 - minimum depth along the track
NOBJNM **OBJNAM** **ORIENT** **PEREND** **PERSTA** **QUASOU**
SOUACC **STATUS** **TECSOU** **TRAFIC**
INFORM - maximum authorised draft (e.g. *Maximum authorised draft = 14 metres*)
NINFOM **NTXTDS** **SCAMIN** **TXTDSC** **RECDAT** **RECIND**
SORDAT **SORIND**

The use of **NAVLINE** and **RECTRC** is defined in more detail in the following Table, and in the Figure below.

Figure 15		NAVLINE	RECTRC	Navigational aids
1	Recommended track on a leading line	CATNAV = 3	CATTRK = 1	at least 2
2	Clearing line on marks in line	CATNAV = 1	none	at least 2
3	Transit line on marks in line	CATNAV = 2	none	at least 2
4	Recommended track on a bearing	CATNAV = 3	CATTRK = 1	1
5	Clearing line on a bearing	CATNAV = 1	none	1
6	Transit line on a bearing	CATNAV = 2	none	1
7	Recommended track not based on fixed marks	none	CATTRK = 2	none

Remarks:

- The recommended track is that portion of a navigation line (see clause X.X) that a ship should use for navigation (see Figure above).
- In the case of a two-way recommended track, only one value of orientation is encoded (in the attribute ORIENT); the other value can be deduced (i.e. the value in ORIENT + 180 degrees). The value of orientation encoded on the attribute ORIENT should be the value of the bearing from seaward. If it is not possible to define a seaward direction, the value that is less than 180° should be used.
- When the traffic flow is one way, the direction of digitising of an object of type line must be the same as the direction of the traffic flow. This is to ensure the correct representation in the ECDIS of the direction to be followed.

Distinction: Fairway; navigation line; recommended route centreline; recommended traffic lane part.

Comment [j144]: S-57 Chapter 1.

Comment [j145]: ENC EB No. 1c

15.6 Fairways

IHO Definition: **FAIRWAY.** That part of a river, harbour and so on, where the main navigable channel for vessels of larger size lies. It is also the usual course followed by vessels entering or leaving harbours, called “ship channel”. (International Maritime Dictionary, 2nd Edition).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

INT 1 Reference: M 18

15.6.1 Fairways (see S-4 – B-432.1(c) and B-434.5)

A fairway, sometimes called Ship Channel, is the main navigable channel in the approaches to, or within, a river or harbour. Fairways which are designated by a regulatory authority are treated as Routeing Measures.

If it is required to encode a fairway, it must be done using the feature **FAIRWY**.

Geo feature: Fairway (**FAIRWY**)

Attributes: DATEND DATSTA
 DRVAL1 - minimum depth in the fairway
 NOBJNM OBJNAM ORIENT QUASOU RESTRN SOUACC
 STATUS TRAFIC INFORM NINFOM NTXTDS SCAMIN
 TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- A collection feature **C_AGGR** or **C_ASSO** (see clause XX) should be created to relate a fairway with associated navigational aids, recommended tracks, dredged areas and other regulated areas.
- Where beacon or buoys marking a fairway are offset from the actual fairway limits, this should be indicated using the attribute **INFORM** on the **FAIRWY** feature.

Distinction: Deep Water route centreline; Deep Water route part; traffic separation scheme lane part.

15.7 Recommended routes

IHO Definition: RECOMMENDED ROUTE CENTRELINE. A recommended route is a route of undefined width, for the convenience of ships in transit, which is often marked by centreline buoys. (IHO Dictionary – S-32).

The recommended route centreline indicates the “centreline” of a recommended route. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.137, November 2000).

15.7.1 Recommended routes (see S-4 – B-435.4)

IMO-designated recommended routes are listed in IMO publication “Ships’ Routeing” Part E. This type of

routing measure was adopted to include such features as the “transit routes” (through former minefields) in the entrances to the Baltic Sea. In contrast to recommended tracks (see clause X.X), there is usually ample sea-room for vessels to keep well starboard (to the right) of the centreline.

If it is required to encode the centreline of a recommended route, it must be done using the feature **RCRTCL**.

Geo feature: Recommended route centreline (**RCRTCL**)

Attributes: CATTRK DATEND DATSTA
 DRVAL1 - minimum depth
 NOBJNM OBJNAM ORIENT PEREND PERSTA QUASOU
 SOUACC STATUS TECSOU TRAFIC INFORM NINFOM
 NTXTDS SCAMIN TXTDSC RECDAT RECIND SORDAT
 SORIND

Remarks:

- When the traffic flow is one way (attribute TRAFIC = 3), the direction of digitising **must** be the same as the direction of traffic flow. **This is to ensure the correct representation in the ECDIS of the direction to be followed along the centreline.**

Distinction: Recommended track; recommended traffic lane part.

15.8 Two-way route part

IHO Definition: TWO-WAY ROUTE PART. A two way route is a route within defined limits inside which two way traffic is established, aimed at providing safe passage of ships through waters where navigation is difficult or dangerous. (IHO Dictionary – S-32).

A two-way route part is an area of a two-way route within which traffic flow is generally along one bearing (and possibly its reciprocal). (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.193, November 2000).

INT 1 Reference: M 28.2

15.8.1 Two-way Routes (see S-4 – B-435.6)

A two-way route consists of one or more areas within which traffic flows in two directions along one bearing and/or its reciprocal. Such routes are established by regulatory authorities and may be adopted by IMO. IMO-designated two-way routes are listed in IMO publication "Ships' Routing" Part E. When it is required to encode these areas, this must be done using the feature **TWRTPT**. These route parts will generally be two-way, but some may be restricted to one-way traffic flow.

Geo feature: Two-way routes (**TWRTPT**)

Attributes: CATTRK DATEND DATSTA
 DRVAL1 - minimum depth
 ORIENT QUASOU SOUACC STATUS TECSOU TRAFIC
 INFORM NINFOM NTXTDS SCAMIN TXTDSC RECDAT
 RECIND SORDAT SORIND

One-way traffic flow in a two-way route

If it is required to encode a two-way route with one-way sections, separate **TWRTPT** features must be encoded for the different parts, with attribute TRAFIC = 3 (one-way) or 4 (two-way). In one-way sections, the attribute ORIENT must indicate the true direction of traffic flow, not its reciprocal. In two-way sections, ORIENT may indicate either direction of traffic flow.

Remarks:

- The orientation of the two-way route part is defined by the centreline of the part and is related to the general direction of the two-way route.

Distinction: Deep Water route part; recommended traffic lane part; traffic separation scheme lane part.

15.9 Recommended direction of traffic flow

IHO Definition: RECOMMENDED TRAFFIC LANE PART. Recommended direction of traffic flow is a traffic flow pattern indicating a recommended directional movement of traffic where it is impractical or unnecessary to adopt an established direction of traffic flow. (IHO Dictionary – S-32).

A recommended traffic lane part is an area of a recommended direction of traffic control area within which traffic flow is generally along one bearing.

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

15.9.1 Recommended traffic lane part (see S-4 – B-435.5)

IMO-designated recommended directions of traffic flow are listed in IMO publication "Ships' Routing" Part E. Several hydrographic offices, in consultation with their Ministries of Transport, have added recommended directions in areas such as the outer approaches to major ports in order to show the best routes for crossing traffic or to minimise the risk of head-on encounters.

The feature **RCTLPT** must be used, where required, to encode areas with a recommended direction of traffic flow which is generally along one bearing:

- between two TSS (INT1 – M 26.1);
- in the entrance area of a TSS;
- along the outside of a Deep Water route (INT1 – M 26.2).

Geo feature: Recommended traffic lane part (**RCTLPT**)

Attributes: DATEND DATSTA ORIENT STATUS INFORM NINFOM
NTXTDS SCAMIN TXTDSC RECDAT RECIND SORDAT
SORIND

Remarks:

- When the area is not defined, a point object should be encoded.
- The orientation of the recommended traffic lane part is defined by the centreline of the part and is related to the general direction of the recommended traffic lane part.

Distinction:

15.10 Traffic separation scheme lane part

IHO Definition: TRAFFIC SEPARATION SCHEME LANE PART. A traffic separation scheme is a scheme which aims to reduce the risk of collision in congested and/or converging areas by separating traffic moving in opposite, or nearly opposite, directions. (IHO Dictionary – S-32).

A traffic lane is an area within defined limits in which one-way traffic flow is established. Natural obstacles, including those forming separation zones, may constitute a boundary. (IHO Dictionary – S-32).

A traffic separation scheme lane part is an area of a traffic lane in which the direction of flow of traffic is generally along one bearing. (Adapted from S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.187, November 2000).

15.10.1 Traffic separation scheme lanes (see S-4 – B-435.1)

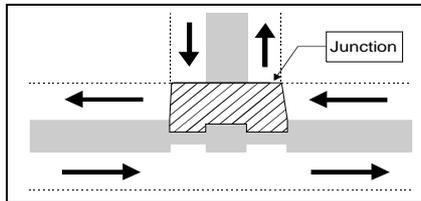

A complete traffic separation scheme lane consists of one or more areas within which the flow of traffic follows one defined direction. If it is required to encode these areas, this must be done using the feature TSSLPT.

Geo feature: Traffic separation scheme lane part (TSSLPT)

Attributes: CATTSS DATEND DATSTA
 ORIENT - direction of the traffic flow
 RESTRN STATUS INFORM NINFOM NTXTDS SCAMIN
 TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- At junctions, other than crossings and roundabouts, a separate TSSLPT feature must be encoded. For this feature, the attribute ORIENT must be omitted, in order to avoid implying that one lane has priority over another (see INT1 – M22). Warning text may be encoded using the attribute INFORM or TXTDSC. In some cases, a precautionary area is established where routes meet or cross (see clause X.X).

Distinction: Recommended traffic lane part; traffic separation line; traffic separation scheme boundary; traffic separation scheme crossing; traffic separation scheme roundabout; traffic separation zone.

15.11 Traffic separation zone

IHO Definition: **TRAFFIC SEPARATION ZONE.** A traffic separation scheme is a scheme which aims to reduce the risk of collision in congested and/or converging areas by separating traffic moving in opposite, or nearly opposite, directions. (IHO Dictionary – S-32).

A traffic separation zone is a zone separating the lanes in which ships are proceeding in opposite or nearly opposite directions; or separating traffic lanes designated for particular classes of ships proceeding in the same direction (IMO Ships Routing, 6th Edition).

RECIND SORDAT SORIND

Remarks:

- The route must be covered by **DEPARE features**.
- A Deep Water route part may overlap a **TSSLPT feature**.
- To encode a complete Deep Water route, the **DWRTCL**, **DWRTPT features**, and the navigational aids **features** (if they are stated in the regulation defining the DW), may be aggregated using the collection **feature C_AGGR** (see clause XX). The attribute OBJNAM on the **C_AGGR feature** is used to encode the name of the DW, and the attribute INFORM or TXTDSC should be used to encode textual information about the whole DW.
- Deep Water routes, unlike dredged areas, are likely to be designated in offshore waters outside the immediate supervision of harbour authorities (although some do form the outer approaches to deep water ports). No least depth quoted can be fully guaranteed in most cases. Normally, least depths within the route must be encoded by soundings as elsewhere on the ENC cell so that the navigator will not assume that the depths are continually monitored. However, in those cases where a hydrographic authority feels confident to guarantee the existence of a minimum depth of water in a DW route, it must be populated

using the attribute DRVAL1.

- IMO-designated Deep Water routes are listed in IMO publication "*Ships' Routing*" Part C.

Distinction: Deep Water route centerline; two-way route part.

15.16 Traffic separation line

IHO Definition: TRAFFIC SEPARATION LINE. A traffic separation scheme is a scheme which aims to reduce the risk of collision in congested and/or converging areas by separating traffic moving in opposite, or nearly opposite, directions. (IHO Dictionary – S-32).

A traffic separation line is a line separating the lanes in which ships are proceeding in opposite, or nearly opposite directions; or separating traffic lanes designated for particular classes of ships proceeding in the same direction. (IMO Ships Routing, 6th Edition).

Traffic separation scheme roundabout (see S-4 – B-435.1)

The **feature TSSRON** must only be used to encode the area in which traffic moves in a counter clockwise

direction around a specified point or zone.

Geo feature: Traffic separation scheme roundabout (**TSSRON**)

Attributes: CATTSS DATEND DATSTA RESTRN STATUS INFORM
NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND
SORDAT SORIND

Remarks:

- A **TSSRON** feature must not overlap a **TSEZNE** feature at its centre.
- In some cases, a precautionary area is established where routes meet or cross (see clause X.X).

Distinction: Traffic separation line; traffic separation scheme boundary; traffic separation scheme crossing; traffic separation scheme lane part; traffic separation zone.

15.20 Archipelagic Sea Lane

IHO Definition: **ARCHIPELAGIC SEA LANE.** Sea lanes designated by an archipelagic State for the passage of ships and aircraft. (IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	ARCSLN (A)	NATION (M) Nationality		A
<i>Paper Chart Symbol</i>		OBJNAM (O) Object name		S
<i>ECDIS Symbol</i>				

INT 1 Reference: M 17

15.20.1 Archipelagic Sea Lane (see S-4 – B-435.10)

Article 53 of the United Nations Convention on the Law of the Sea (UNCLOS) states that: "an archipelagic State may designate sea lanes ..., suitable for the continuous and expeditious passage of foreign ships ... through ... its archipelagic waters and the adjacent Territorial Sea. ... All ships ... enjoy the right of archipelagic sea lanes passage in such sea lanes ... [which] include all normal passage routes used as routes for international navigation ... through archipelagic waters". (Note: references to aircraft and air routes in UNCLOS have been omitted in these extracts from Article 53). (IHO S-4 B-435.10, S-51 Appendix 2 Part II).

Any archipelagic State which wishes to designate Archipelagic Sea Lanes (ASL) must propose them to IMO for adoption as ASL including all normal passage routes and navigational channels as required by UNCLOS. ASL are adopted by IMO in accordance with the relevant provisions of UNCLOS.

If it is required to encode an Archipelagic Sea Lane, it must be done using **ARCSLN** and/or **ASLXIS** (see clause X.X) features, and possibly navigational aids features.

The unique character of ASLs is specified by UNCLOS Article 53 and Part H, General Provision of IMO Ships Routing. Further information is provided in the IHO publication S-51 (Manual on Technical Aspects of the United Nations Convention on the Law of the Sea).

The encoding of relationships between these features is defined in clause X.X.

Geo feature: Archipelagic Sea Lane (**ARCSLN**)

Attributes: DATEND DATSTA NATION NOBJNM OBJNAM INFORM
NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND
SORDAT SORIND

Remarks:

- The feature Archipelagic Sea Lane encodes the area of an Archipelagic Sea Lane.
- In some cases only accurate information on the axes (**ASLXIS**, see clause X.X) may be available and in such cases the extents of the ASL (**ARCSLN**) may not be able to be encoded.
- To encode an Archipelagic Sea Lane (ASL) system, the **ARCSLN**, **ASLXIS** features, and any navigational aids features (if they are stated in the regulation defining the ASL), should be aggregated using the feature **C_AGGR** (see clause X.X). The attribute **OBJNAM** for the **C_AGGR** feature may be used to encode the name of the ASL (if applicable).
- Traffic within an ASL is not separated, except in any traffic separation schemes which may be designated in an ASL for the safe passage of ships.

Distinction: Administrative area; Archipelagic Sea Lane axis; caution area; fairway; inshore traffic zone; recommended traffic lane part; restricted area; submarine transit lane; traffic separation scheme lane part;

traffic separation zone; two-way route part.

15.21 Archipelagic Sea Lane Axis

IHO Definition: **ARCHIPELAGIC SEA LANE AXIS.** The reference line used to determine the maximum extents of an Archipelagic Sea Lane. It may not indicate the deepest water nor any recommended route or track.

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	ASLXIS (L)	NATION (M) Nationality		A
<i>Paper Chart Symbol</i>		OBJNAM (O) Object name		S
<i>ECDIS Symbol</i>				

INT 1 Reference: M 17

15.21.1 Archipelagic Sea Lane Axis (see S-4 – B-435.10)

Article 53 of the United Nations Convention on the Law of the Sea (UNCLOS) states that: "an archipelagic State may designate sea lanes ..., suitable for the continuous and expeditious passage of foreign ships ... through ... its archipelagic waters and the adjacent Territorial Sea. ... All ships ... enjoy the right of archipelagic sea lanes passage in such sea lanes ... [which] include all normal passage routes used as routes for international navigation ... through archipelagic waters". (Note: references to aircraft and air routes in UNCLOS have been omitted in these extracts from Article 53). (IHO S-4 B-435.10, S-51 Appendix 2 Part II).

The axis line of an Archipelagic Sea lane (ASL) is encoded in ENCs only for the purpose of defining the sea lane. The axis line does not indicate any routes or recommended tracks as defined in IMO publication "Ships' Routeing" Part A.

Geo feature: Archipelagic Sea Lane (**ASLXIS**)
Attributes: DATEND DATSTA NATION NOBJNM OBJNAM INFORM
 NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND
 SORDAT SORIND

Remarks:

- To encode an Archipelagic Sea Lane (ASL) system, the **ARCSLN**, **ASLXIS features**, and any navigational aids **features** (if they are stated in the regulation defining the ASL), should be aggregated using the **feature C_AGGR** (see clause X.X). The attribute **OBJNAM** for the **C_AGGR** feature may be used to encode the name of the ASL (if applicable).

Distinction: Administrative area; Archipelagic Sea Lane; caution area; Deep Water route centreline; fairway; inshore traffic zone; navigation line; recommended route centreline; recommended track; recommended traffic lane part; restricted area; submarine transit lane; traffic separation scheme lane part; traffic separation line; traffic separation zone; two-way route part.

15.22 Radio calling-in point

IHO Definition: **RADIO CALLING-IN POINT.** Point at which vessels are required to report to a Traffic Control Center. (IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	RDOCAL (P, L)	CALSGN (O) Call sign		S

Comment [j161]: S-57
Extension 06/01.

INT 1 Reference: M 40.1-2

15.22.1 Radio calling-in (reporting) points (see S-4 – B-488.1 and B-488.2)

Radio calling-in points, also called radio reporting points, have been established in certain busy waterways and port approaches to assist traffic control. On passing these points or crossing a defined line vessels are required to report on VHF to a Traffic Control Centre.

If it is required to encode a radio reporting point or line, it must be done using the feature **RDOCAL**.

Geo feature: Radio calling-in point (**RDOCAL**)

Attributes: CALSGN COMCHA DATEND DATSTA NOBJNM

OBJNAM - e.g. alphanumeric designator

ORIENT - orientation of the traffic flow at that point

PEREND PERSTA STATUS TRAFIC

INFORM - notes; for example, if the requirement to report by radio relates to certain classes of vessels only. The attribute TXTDSC may be used instead of INFORM, or for longer explanations or notes

NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND

SORDAT SORIND

Remarks:

- Each **RDOCAL** feature must only carry one orientation. If it is required to encode the reciprocal orientation, to indicate that a bearing and its opposite apply to a **RDOCAL** feature, it must be done using attribute TRAFIC = 4 (two-way). If the same position is used for another orientation (not opposite) of traffic flow, an additional **RDOCAL** feature must be created.
- **RDOCAL** features of type line should be digitised in a direction such that the traffic direction that is required

to report is to the right.

Distinction: Radio station; pilot boarding place.

15.23 Ferry route

IHO Definition: **FERRY ROUTE.** A route in a body of water where a ferry crosses from one shoreline to another. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	FERYRT (L, A)	CATFRY (M) Category of ferry	1 : "free-moving" ferry 2 : cable ferry 3 : ice ferry	L

Remarks:

- Coast radar stations are shore-based stations which the mariner can contact by radio to obtain a position. These stations are being increasingly replaced by other position-fixing methods.
- The **RADSTA** must only be used to encode the technical equipment itself, independent of the building or structure in which it is installed. If it is required to encode the building or structure (e.g. mast, tower, radar dome) it must be done using an appropriate **feature** (e.g. **BUISGL**, **LNDMRK**).

Distinction: Radar line; radar range; radar transponder beacon.

Comment [j164]: S-57 Supplement No. 2.

16 Areas, limits

16.1 International boundaries and national limits (see S-4 – B-440)

The United Nations Convention on the Law of the Sea, 1982 came into force on 16 November 1994. UNCLOS contains navigational provisions as well as provisions for determining the limits of various maritime zones. These provisions are binding to all states that have ratified the Convention. For technical aspects of UNCLOS, see IHO publication S-51.

IHO Member States should show, on selected series of their ENC's, their own baseline and maritime limits in accordance with UNCLOS (former IHO Technical Resolution [B2.35](#)).

The mariner may be interested in the exact location of international maritime boundaries for two principal reasons:

- When crossing a boundary they could be subject to different laws and regulations which may effect their navigation, e.g. buoyage systems, pilotage regulations, fishing rights, reporting procedures, pollution regulations.
- Where a boundary passes through groups of offshore islands they may wish to know upon which side of the boundary a particular island falls.

16.2 Anchorage area

IHO Definition: ANCHORAGE AREA. An area in which vessels or seaplanes anchor or may anchor. (Adapted from IHO Dictionary – S-32).

Comment [j165]: MD8 – 7.Cl.3 and 7.Co.15.

		STATUS (O) Status	1 : permanent 2 : occasional 4 : not in use 6 : reserved 7 : temporary	L

INT 1 Reference: N 23, 24, 62.1, 62.2

16.5.1 Dumping grounds (see S-4 – B-442; B-446 and B-446.1)

Materials deliberately dumped at sea in specified areas (other than those associated with reclamation works) may be classified, according to their significance to the mariner, as follows

- Materials which are generally dispersed before reaching the seabed, e.g. sewage sludge, are of little navigational significance and no charting action is usually required.
- Spoil from dredging operations or other works which might reduce charted depths significantly in the designated spoil ground.
- Concrete blocks, cars, or other objects dumped as havens for the breeding of fish.
- Harmful materials, including explosives and chemicals, which are likely to remain concentrated on the seabed.

Dumping of harmful materials is unlikely to affect depths substantially and such dumping grounds are encoded primarily as a warning against anchoring, trawling or other submarine operations.

Spoil grounds are areas set aside, clear of shipping channels and in deep water where possible, for the disposal of material (spoil) generally obtained by dredging. Their significance to the mariner is that very large quantities of material may be dumped, decreasing the depth of water available.

If it is required to encode a dumping ground, it must be done using the feature **DMPGRD**.

Geo feature: Dumping ground (**DMPGRD**)
 Attributes: CATDPG NOBJNM OBJNAM RESTRN STATUS INFORM
 NINFOM NTXTDS SCAMIN TXTDSC RECDAT RECIND
 SORDAT SORIND

Remarks:

- A **DMPGRD** feature of type area must be covered by features from Group 1 as appropriate (**DEPARE** or **UNSARE**).
- Disused dumping grounds for harmful materials are considered dangerous for an indefinite period and must therefore be encoded on the largest optimum display scale ENC cells, with attribute **STATUS = 4** (not in use). The date when the area ceased to be used may be populated using the attribute **INFORM**, if known.
- Within a spoil ground; if the depths within the area are liable to be very much less than charted after the discharge of spoil, they may be treated as unsurveyed areas (see clause X.X), in which case soundings and depth contours may be omitted from the area,

Distinction: Dredged area; incineration area.

16.6 Military practice area

IHO Definition: **MILITARY PRACTICE AREA.** An area within which naval, military or aerial exercises are carried out. Also called an exercise area. (Adapted from *IHO Dictionary – S-32*).

Comment [j168]: S-57 Extension 06/01.

INT 1 Reference: N 30-33

16.6.1 Military practice areas (see S-4 – B-441.1-6)

Military practice (or exercise) areas at sea are of various types and may be classified as follows with regard to their significance for the mariner:

- Firing danger areas, sometimes called firing practice areas, i.e. permanent or temporary ranges, including bombing, torpedo and missile ranges.
- Mine-laying practice (and counter-measures) areas.
- Submarine exercise areas.
- Other exercise areas.

Some degree of restriction on navigation and other rights may be implied by the encoding of military practice areas. There may be varying interpretations of the validity of the restrictions and possible infringement of the rights of innocent passage through territorial waters and elsewhere. Where it is thought desirable to depict such areas, even though clear range procedure may be observed, or the areas appear to be a derogation of the freedom of the seas, mariners should be informed (not necessarily on ENC's) that publication of the details of a law or regulation is solely for the safety and convenience of shipping and implies no recognition of the international validity of the law or regulation. By this means infringements are not condoned but the mariner receives a warning which may be necessary for their safety.

If it is required to encode a military practice area, it must be done using the feature **MIPARE**.

Geo feature: Military practice area (**MIPARE**)
 Attributes: CATMPA DATEND DATSTA NOBJNM OBJNAM PEREND
 PERSTA RESTRN STATUS INFORM NINFOM NTXTDS
 SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- Submarine exercise areas should not be encoded because submarines exercise over wide areas which it would not be practicable to depict, and over which cautions (to keep a good look out for them) are unlikely to be effective. They may, however, be encoded where they occur in or near major shipping lanes or port approaches.
- Firing danger areas at sea are frequently marked by IALA special buoys sometimes laid around the perimeter of the area and/or by specially erected lights, beacons and targets. If required, all such features which could assist the navigator in identifying their position, or could be a hazard, must be encoded in the normal way.
- The existence of mine laying (and counter-measures/clearance) practice areas implies the possibility of unexploded mines or depth charges on the sea floor, and also the presence of harmless practice mines.

Distinction: Caution area; restricted area; submarine transit lane.

16.7 Administration area (named)

IHO Definition: **ADMINISTRATION AREA.** A defined (and possibly named) administrative area. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.3, November 2000).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

<i>ECDIS Symbol</i>		OBJNAM (O) Object name		S

INT 1 Reference: N 40, 41

16.7.1 International and national territories (see S-4 – B-440.1 and B-440.3)

International maritime boundaries are those which have been established by agreement between adjacent or opposite States. Boundaries are sometimes negotiated on the basis of the equidistance or “median” line principle. For various reasons, however, agreed boundaries even when negotiated on this principle are seldom true median lines.

Navigationally, international boundaries may vary in their significance over different parts of their lengths. Inshore, they may represent the delimitation of Territorial Seas of two states or “internal waters”, (e.g. within bay closing lines or straight baseline systems). Offshore, they may represent Exclusive Economic Zone and/or Continental Shelf boundaries.

If it is required to encode named international or national territory, it must be done using the feature **ADMARE**.

Geo feature: Administration area (**ADMARE**)

Attributes: JRSDTN NATION NOBJNM OBJNAM INFORM NINFOM
NTXTDS PICREP SCAMIN TXTDSC RECDAT RECIND

INT 1 Reference:

16.9.1 Caution areas (see S-4 – B-242)

If it is required to identify an area in which the mariner must be aware of circumstances influencing the safety of navigation (e.g. an area of continually changing depths), it must be done using the **feature CTNARE**. This **feature** may be required to identify a danger, a risk, a rule or advice that is not directly related to a particular object.

Geo **feature:** Caution area (**CTNARE**)

Attributes: DATEND DATSTA PEREND PERSTA INFORM NINFOM
 NTXTDS SCAMIN TXTDSC RECDAT RECIND SORDAT
 SORIND

Remarks:

- Notes should be kept to a minimum and be as concise as is compatible with accuracy and intelligibility. Hydrographic terminology (jargon) should be avoided, giving preference to easily understood words, e.g. "depths" rather than "bathymetry".
- Some nations have introduced collision regulations (COLREGS) that may include demarcation lines differentiating between inland water rules and International Rules as a result of the Convention on the International Regulations for Preventing Collisions at Sea 1972. If it is required to encode COLREG's, it may be done using the object class **CTNARE**, with the attributes **INFORM** and/or **TXTDSC** containing a short explanation about the regulation. The attribute **TXTDSC** may be used instead of **INFORM**, or for longer explanations or notes.

Distinction: Wrecks; obstructions; underwater rocks; unsurveyed area.

16.10 Contiguous Zone

IHO Definition: **CONTIGUOUS ZONE.** A zone contiguous to a coastal State's Territorial Sea, which may not extend beyond 24 nautical miles from the baselines from which the breadth of the Territorial Sea is measured. The coastal state may exercise certain control in this zone subject to the provisions of International Law. (*IHO Dictionary – S-32*).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	CONZNE (A)	NATION (M) Nationality		A

Remarks:

- Where issues of maritime jurisdiction between two or more coastal States are in dispute, the proposed Contiguous Zone of one coastal State may overlap the proposed Contiguous Zone of another coastal State. Where an area is in dispute, a **CTNARE** object should be encoded covering the entire disputed area, with caution notes advising that the area is in dispute encoded using the attributes INFORM and/or TXTDSC.

Distinction: Administrative area; Continental Shelf area; Exclusive Economic Zone; fishery zone; Territorial Sea area.

16.11 Continental Shelf area

IHO Definition: **CONTINENTAL SHELF AREA.** The Continental Shelf of a coastal State comprises the seabed and subsoil of the submarine areas that extend beyond its Territorial Sea throughout the natural prolongation of its land territory to the outer edge of the continental margin, or to a distance of 200 nautical miles from the baselines from which the breadth of the Territorial Sea is measured where the outer edge of the continental margin does not extend out to that distance. (IHO Publication S-51).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

<i>Paper Chart Symbol</i>				
<i>ECDIS Symbol</i>				

INT 1 Reference: N 46

16.11.1 Continental Shelf (see S-4 – B-440.8)

The delineation of the Continental Shelf beyond 200 nautical miles from the Territorial Sea baselines is complex. Details are given in UNCLOS (see IHO Publication S-51). The coastal State exercises sovereign rights over the Continental Shelf for the purpose of exploring it and exploiting its natural resources. Complex procedures exist within UNCLOS for the establishment of the limits of the Continental Shelf. Where these procedures have been followed the area must be encoded on suitable optimum display scale ENC data.

If it is required to encode the Continental Shelf, it must be done using the feature **COSARE**.

INT 1 Reference: N 45

16.14.1 Fishery zones (see S-4 – B-440.7)

A fishery zone is an area inside and beyond the Territorial Sea where a coastal State proclaims that it alone may regulate fishing. Where States have permitted others to fish in parts of the area, it may be desirable to encode the area of both the full area and the area of special concessionary rights. In some instances, claims are described as “conservation zones”; for practical purposes these may be classed with fishery zones since their intended function is to institute fishery conservation measures. Most of the fishery zone claims are limited by fixed distance (200 nautical miles in some cases) from the Territorial Sea baselines.

If it is required to encode a fishery zone, it must be done using the feature **FSHZNE**.

16.21 Straight Territorial Sea Baseline

IHO Definition: STRAIGHT TERRITORIAL SEA BASELINE. A baseline is the line from which the outer limits of the territorial sea and certain other outer limits are measured. (IHO Dictionary – S-32).

Straight baselines are a system of straight lines joining specified or discrete points on the low-water line, usually known as straight baseline turning points. (IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	STSLNE (L)	NATION (M) Nationality		A
<i>Paper Chart Symbol</i>				
<i>ECDIS Symbol</i>				

INT 1 Reference: N 42

16.21.1 Straight Territorial Sea Baselines (see S-4 – B-440.4)

A Territorial Sea is delimited by:

- Territorial Sea Baselines (drying lines),
- Straight Territorial Sea Baselines,
- International maritime boundaries (see clause X.X),
- Seaward limits of Territorial Seas (see clause X.X).

The term “Baseline” refers to the line from which the breadth of the Territorial Sea, the outer limits of the Contiguous Zone, the Exclusive Economic Zone and, in some cases, the Continental Shelf are measured. It is also the dividing line between internal waters and territorial seas. Internal waters comprise all areas of the sea on the landward side of the Territorial Sea Baselines, as well as inland waters including rivers, lakes, etc.

The normal baseline is the low water line (which is not defined any more precisely by UNCLOS) of the mainland, islands, or low tide elevations, as depicted on large scale charts officially recognised by the coastal State; they therefore do not require depiction in ENCs. Features which are naturally-formed and dry at low water (e.g. rocks, reefs, sand banks) may be considered low-tide elevations and included in the baseline (details are given in UNCLOS - see IHO publication S-51).

A straight baseline may be used:

- as a closing line across the mouth or estuary of a river;
- as a closing line across the mouth of a juridical bay or a historical bay;
- as part of a system of straight Territorial Sea Baselines, e.g. to connect seaward points on a deeply indented coastline, a coastline that is fringed with islands, around unstable coastlines; or
- as an archipelagic baseline.

If it is required to encode a Straight Territorial Sea Baseline, it must be done using the feature **STSLNE**.

Distinction: Military practice area.

16.24 Restricted area

IHO Definition: **RESTRICTED AREA.** A specified area on land or water designated by an appropriate authority within which access or navigation is restricted in accordance with certain specified conditions. (Adapted from IHO Dictionary – S-32).

Comment [j174]: MD8 – 2.Co.2 and 2.Cl.2.

Comment [j175]: MD8 – 2.Co.2 and 2.Cl.2.

If there is no such requirement, or if it is not practicable, details of ESSA should only be inserted in associated publications, such as Sailing Directions. It should be noted that the inclusion of ESSA on smaller optimum display scale of the ENC data may be appropriate for voyage planning purposes. Nature Reserves should only be encoded on ENC’s when considered appropriate to the optimum display scale of the ENC data and purpose of the cell. The term “no anchoring area” is used to identify the IMO routing measure of that name. Such areas, where required, must be encoded as RESARE with attribute RESTRN = 1 (anchoring prohibited). A degaussing (or demagnetising) range is an area, usually of about 0.2M diameter, within which ships’ 				

Comment [j178]: S-57
Extension 06/01.

Comment [j179]: S-57
Extension 06/01.

magnetic fields may be measured. Sensing instruments and cables are installed on the sea floor in the range and there are cables leading from the range to a control position ashore. The range is usually marked by distinctive buoys. The significance of a degaussing range to mariners is that anchoring and trawling are prohibited and that the range may have to be avoided when vessels are using it.

- If it is required to encode an area for which the mariner must be made aware of circumstances influencing the safety of navigation, it must be done using the feature **CTNARE** (see clause X.X). This feature may be used to identify a danger, a risk, a rule or advice (e.g. an area of continually changing depths) which is not directly related to a particular feature.

Distinction: Anchorage area; cable area; caution area; Deep Water route part; depth area; dredged area; dumping ground; fairway; military practice area; pipeline area; swept area.

17 Aids to Navigation - Overview

17.1 Geo features forming parts of navigational aids

Aids to navigation are composed of fixed or floating structure features carrying equipment features.

The most common structure features are: BCNCAR, BCNISD, BCNLAT, BCNSAW, BCNSPP, BOYCAR, BOYINB, BOYISD, BOYLAT, BOYSAW, BOYSPP, BRIDGE, BUISGL, CRANES, DAYMAR, FLODOC, FORSTC, FSHFAC, HULKES, LITFLT, LITVIS, LNDMRK, MORFAC, OFSPLF, PILPNT, PONTON, PYLONS, OBSTRN, SLCONS, WRECKES.

Equipment features consist of: DAYMAR, FOGSIG, LIGHTS, RADSTA, RDOSTA, RETRFL, RTPBCN, SISTAT, SISTAW, TOPMAR.

Radar reflectors must not be encoded as separate features when attached to navigational aids. If it is required to encode their existence, it must be done using the attribute CONRAD = 3 (radar conspicuous (has radar reflector)) on the structure feature.

Rescue stations and coast guard stations are not related to navigation, and they must not, therefore, be part of the equipment features of navigational aids. If it is required to encode a rescue or coast guard station at the same location as a navigational mark, it must be encoded as a separate feature, and share the same spatial feature as the navigational aid.

17.2 Relationships

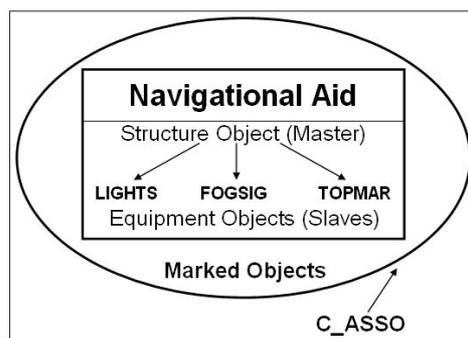

A master to slave relationship must be created in order to relate the different features comprising a navigational aid. Where a master to slave relationship is created, there must be only one master (structure) feature related to one or more slave (equipment) features. A slave feature must not be related to more than one master feature, and a feature must not be both a master and a slave feature.

When the navigational aid contains a structure feature (from the list above), this feature must be the master feature, and the equipment features must be the slaves. Note that DAYMAR may be a master feature or a slave feature; where a navigational aid contains a DAYMAR and there is no other base structure indicated on the source, the DAYMAR feature should be encoded as the master feature.

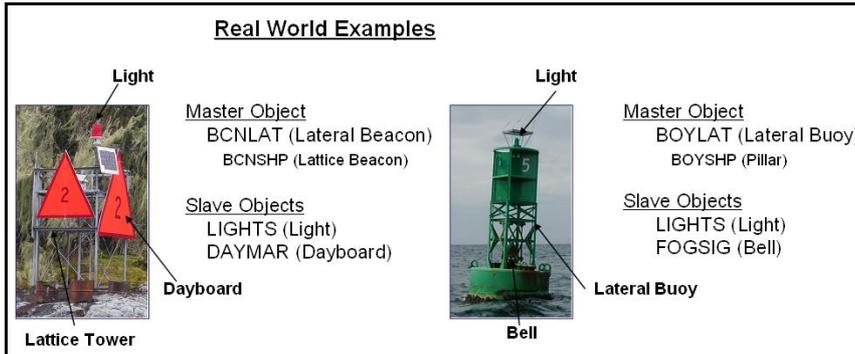

When the nature of the base structure on land is unknown or there is no structure object one of the equipment features may be chosen as the master feature, giving priority to a LIGHTS feature, if one exists. Alternatively, a PILPNT feature of type point may be encoded as the structure feature at the same position as the equipment features. When the nature of the base structure in the water is unknown, a PILPNT feature of type point must be encoded as the structure feature at the same position as the equipment features.

Comment [j180]: E-mail discussion – EM, GU and JW 12-14 October 2010.

Comment [j181]: ENC EB No. XX.

Navigational Aids – Master / Slave Relationship

Navigational Aids – Master / Slave Relationship: Real World Examples

In the above real world examples, the master and slave features that make up the navigational aids are point spatial features, and they must share the same geographic point spatial feature.

If it is required to encode the name of the navigational aid, it must be done using the attribute OBJNAM (and possibly the attribute NOBJNM) on the master feature. The name **must** not be repeated for the slave features. If the name is painted on the structure, it must be encoded with the same spelling in OBJNAM if it is based on the Latin alphabet. If the name is not based on the Latin alphabet, it must be encoded on NOBJNM, and transliterated for encoding on OBJNAM.

All point features comprising a navigational aid must share the same geographic point spatial feature.

The navigational aid may be associated with the features which it marks (e.g. to RESARE or OBSTRN features) using the collection feature C_ASSO (see clause XX). Several navigational aids and several marked features may be associated in the same relationship.

17.3 Buoyage systems and direction of buoyage (see S-4 – B-461)

Systems of buoyage are described as lateral, cardinal, or a combination of lateral and cardinal. Lateral systems depend on a direction of buoyage being defined. The cardinal system depends solely on the main points of the compass. Special purpose buoys often mark the limits or centre of an area (e.g. an exercise area, a dumping ground) and do not necessarily have lateral or cardinal system characteristics.

The IALA Maritime Buoyage System details, including the extent of Regions A and B, are given in other publications (e.g. UK's booklet NP 735 "IALA Maritime Buoyage System"). Although it is called a buoyage system, it applies to all fixed and floating marks except lighthouses, some sector lights, leading lights and marks, major floating lights and lights on offshore structures. Five types of marks are provided by the system: Lateral, Cardinal, Isolated danger, Safe water and Special marks, which may be used in any combination. Emergency Wreck Marking Buoys were added on a trial basis in 2006.

The buoyage system of the data set and, where necessary, the direction of buoyage, must be encoded using the meta feature M_NSYS (see clause X.X).

17.4 Colours and colour patterns

If it is required to encode multiple colours on a feature, they must be encoded using the attributes COLPAT and COLOUR as follows:

- For horizontal stripes (COLPAT = 1), the first colour in the list must be the top-most, and subsequent colours follow sequentially from top to bottom. For example, COLOUR = 3,1 to encode a red stripe above a white stripe.
- For vertical stripes (COLPAT = 2), the first colour in the list must be the left-most, and subsequent colours follow sequentially from left to right. For example, COLOUR = 3,1,3 to encode red, white, red vertical stripes
- For diagonal stripes (COLPAT = 3), the first colour in the list must be the top-left-most, and subsequent colours follow sequentially from top left to bottom right. For example, COLOUR = 1,3,1,3,1 to encode white, red, white, red, white diagonal stripes.

- For squares (COLPAT = 4), the first colour in the list must be the top-left-most square. Subsequent colours follow sequentially from left to right along the top row then repeated for subsequent rows until the bottom right-most square is reached. For example, COLOUR = 1,3,3,1 to encode white, red squares on the top row and red, white squares on the bottom row.
- For border stripes (COLPAT = 6), the first colour in the list must be the border stripe, the second colour must be that of the background. For example, COLOUR = 3,1 to encode a red border stripe on a white background. Where a border stripe is combined with other patterns, the border stripe colour must be the first colour in the list, and subsequent colours must be interpreted in accordance with the rules defined for the additional patterns. Therefore, if a pattern contains a border stripe as well as other patterns, the border stripe must be the first value in the list of COLPAT.

17.5 Radar conspicuous features

The attribute CONRAD (conspicuous, radar) is used to encode whether or not a feature is radar conspicuous.

Remarks:

- If it is required to encode a feature which has no radar reflector, but is radar conspicuous, it must be indicated using attribute CONRAD = 1 (radar conspicuous) on the feature.
- If it is required to encode an area or point feature which is radar conspicuous because it is fitted with a radar reflector, it must be indicated using CONRAD = 3 (radar conspicuous (has radar reflector)) on the feature.
- If it is required to encode radar reflectors on line features (e.g. overhead cables), this must be done using the feature RADRFL (see clause X.X).

17.6 Dates

When encoding dates using the attributes CPDATE, DATEND, DATSTA, PEREND, PERSTA, SORDAT, SUREND and SURSTA, and no specific year, month or day is required, the following values must apply in conformance to ISO 8601:1988.

- No specific year required, same day each year: --MMDD
- No specific year required, same month each year: --MM
- No specific day required: CCYYMM
- No specific month required: CCYY

Notes: CCYY = calendar year; MM = month; DD = day.
In the first two values, the dashes (--) must be included.

17.6.1 Seasonal objects

If it is required to show seasonality of features, it must be done using the attribute STATUS = 5 (periodic/intermittent).
If it is required to encode the start and/or end dates of the season, this must be done using the attributes PERSTA and PEREND.

18 Lights

18.1 Light

<u>IHO Definition:</u> LIGHT. A luminous or lighted aid to navigation. (IHO Dictionary – S-32).

18.1.1 Lights (see S-4 – B-470)

If it is required to encode a light and its sectors, **each sector of the light must be encoded using one separate LIGHTS feature**. These **features** must be slave **features** of the same master **feature**, which is either the structure **feature** or one of the **LIGHTS**, so that the relationship between them is indicated using the master/slave relationship mechanism described in clause X.X.

The IALA Maritime Buoyage System rules do not apply for most landfall lights but will apply to minor lights but not to leading lights, some sector lights, landfall lights or major floating lights. In general, sector lights follow IALA convention when used for marking a channel.

Geo **feature**: Light (**LIGHTS**)

Attributes:

- CATLIT** - mandatory for air obstruction and fog detector lights
- COLOUR** - mandatory except for air obstruction and fog detector lights
- DATEND** **DATSTA** **EXCLIT**
- HEIGHT** - prohibited for floating lights
- LITCHR** - mandatory except for air obstruction and fog detector lights
- LITVIS** **MARSYS** **MLTYLT** **NOBJNM** **OBJNAM**
- ORIENT** - prohibited, except for directional or moiré effect lights
- PEREND** **PERSTA**
- SECTR1** - only for sector lights
- SECTR2** - only for sector lights
- SIGGRP** - prohibited for fixed lights
- SIGPER** - prohibited for fixed lights
- SIGSEQ** - prohibited for fixed lights
- STATUS** **VALNMR**
- VERDAT** - applies only to **HEIGHT**; this value must only be encoded if it is different to the value encoded in the **VDAT** subfield of the Data Set Parameter (**DSPM**) field, or different to the value of **VERDAT** encoded on meta **feature M_VDAT**
- INFORM** **NINFOM** **NTXTDS** **SCAMIN** **TXTDSC** **RECDAT**
- RECIND** **SORDAT** **SORIND**

Further guidance for encoding various types and characteristics of lights can be found in clauses X.X to X.X.

Remarks:

- If it is required to encode types and functions of lights, this must be done using the attribute CATLIT.
- If it is required to encode details of the lighting technology (e.g. neon), it must be done using the attribute INFORM.
- If it is required to encode the purpose of a marine spotlight, it must be done using INFORM.
- **LIGHTS** features located in the water must have a master structure object, generally a beacon (e.g. **BCNLAT**, **BCNSPP**) or other fixed structure (e.g. **OFSPLF**), or a buoy structure (e.g. **BOYLAT**, **BOYSPP**) for floating aids to navigation. When a light is located in the water with no indication on the source of the structure feature, regardless of the height of the light, a **PILPNT** feature should be encoded as the master feature.
- Names of major lights are very important. If a light has a name which is unrelated to any other encoded feature, the name must be populated using the attribute OBJNAM on at least the largest scale optimum display scale ENC data. If the name of a light is obviously that of the named feature on which the light stands, e.g. Saint Catherine's Point, the name of the light need not be repeated for the **LIGHTS**.

Distinction: Beacon, cardinal; beacon, isolated danger; beacon, lateral; beacon, safe water; beacon, special purpose/general; buoy, cardinal; buoy, installation; buoy, isolated danger; buoy, lateral; buoy, safe water; buoy, special purpose/general; light vessel; light float.

18.2 Rhythms of lights (see S-4 – B-471.2)

The principal character of a light is its rhythm (although, strictly, fixed lights and some alternating lights are not "rhythmic").

If it is required to encode the rhythms of lights, this must be done using the attributes LITCHR and SIGGRP.

The use of these attributes is defined in the following table; it contains the most common examples of coding; other coding combinations are possible:

Rhythms of lights	F	Oc	Oc(2)	Oc(2+3)	Iso	FI	FI(3)	LFI
LITCHR	1	8	8	8	7	2	2	3
SIGGRP	<i>prohibited</i>	(1)	(2)	(2+3)	(1)	(1)	(3)	(1)

Rhythms of lights	Q	Q(3)	IQ	VQ	VQ(3)	IVQ	UQ	IUQ
LITCHR	4	4	9	5	5	10	6	11
SIGGRP	(1)	(3)	()	(1)	(3)	()	(1)	()

Rhythms of lights	Mo(K)	FFI	Q(6)+LFI	VQ(6)+LFI	Al.WR	Al.FI.WR	Al.FI(2W+1R)	Al.Oc(4)WR
LITCHR	12	13	25	26	28	19	19	17
SIGGRP	(K)	(1)	(6)(1)	(6)(1)	()	(1)	(2+1)	(4)

Some lights recently constructed may appear to the mariner as "fixed and flashing - FFL" by night, while the real world feature actually comprises two separate lights vertically disposed, one fixed and the other flashing (F&FI). When it is known that two separate features actually exist, they must be encoded as separate features, in this case two **LIGHTS** features, one with attribute LITCHR = 1 (fixed) and the other with LITCHR = 2 (flashing), and not as one **LIGHTS** with LITCHR = 13 (fixed and flashing).

18.3 Elevations of lights (see S-4 – B-471.6)

The elevation of a light is the vertical distance between the light source and the plane of reference for heights for the ENC data (see clause X.X).

If it is required to encode the elevation of a light on a fixed structure, it must be done using the attribute HEIGHT.

If it is required to encode the height above the water surface of a light on a floating structure, it must be done using the attribute INFORM on the **LIGHTS** feature.

18.4 Times of exhibition and exhibition conditions (see S-4 – B-473)

18.4.1 Night lights

If it is required to encode a night light, it must be done using a **LIGHTS** feature with attribute EXCLIT = 4 (night light).

Unwatched lights (see S-4 – B-473.1)

This information should not be encoded, but unwatched (unmanned) lights, with no standby or emergency arrangements, may be encoded using attribute STATUS = 17 (unwatched).

18.4.2 Occasional lights (see S-4 – B-473.2)

If it is required to encode an occasional light, it must be done using attribute STATUS = 2 (occasional). If it is required to encode a private light that is not regularly exhibited, it must be done using STATUS = 2,8 (occasional, private).

18.4.3 Daytime lights (see S-4 – B-473.4)

If it is required to encode a daytime light, it must be done using attribute EXCLIT = 1 (light shown without change of character).

If it is required to encode a light having characteristics shown by day different to those shown at night, it must be done by encoding two LIGHTS features sharing the same point spatial feature:

- one LIGHTS feature with EXCLIT = 2 (daytime light),
- one LIGHTS feature with EXCLIT = 4 (night light).

18.4.4 Fog lights (see S-4 – B-473.5)

If it is required to encode a fog light, it must be done using a LIGHTS feature, with attributes EXCLIT = 3 (fog light) and STATUS = 2 (occasional).

If it is required to encode a light having characteristics shown in fog that are different to those shown in conditions of normal visibility, it must be done by encoding two LIGHTS features sharing the same point spatial feature:

- one LIGHTS object with EXCLIT = 3 (fog light) and STATUS = 2 (occasional)
- one LIGHTS object with EXCLIT = 2 (daytime light) or 4 (night light) and attribute INFORM = *Character of the light changes in fog.*

18.5 Sector lights and lights not visible all round (see S-4 – B-475)

18.5.1 Sector lights (see S-4 – B-475.1-5)

Each sector in which the light is visible from seaward must be encoded as one LIGHTS feature.

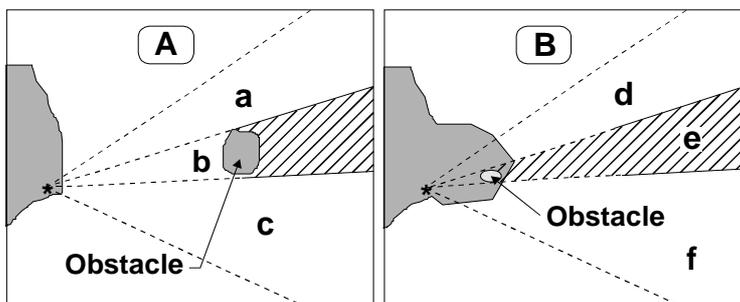

There must not be a feature created to encode a sector where no light is exhibited.

Limits of sectors must be encoded using attributes SECTR1 and SECTR2.

18.5.2 Lights obscured by obstructions (see S-4 – B-475.3)

If an encoded light is obscured in a part of the navigable area of a sector (see Figure A below) beyond an offshore obstruction, it must be encoded as several LIGHTS features. The partially obscured sector of (b), seaward of the island, must be encoded as a LIGHTS feature, with attributes LITVIS = 8 (partially obscured) and INFORM = *Sector obscured only beyond* The sectors in which the light is visible from seaward ((a) and (c)) must be encoded as separate LIGHTS features.

If there is no navigable water between the light and the obstacle (see Figure B below), the masked sector must be encoded as a LIGHTS feature, with LITVIS = 3 (faint) or 7 (obscured).

Obscured light sectors

18.5.3 White fairway sectors (see S-4 – B-475.5)

The light sectors must be encoded as separate **LIGHTS** features. The fairway defined by the succession of navigable areas in the white sectors may be encoded using the feature **FAIRWAY** (see clause X.X).

18.5.4 Oscillating light sectors

Evolving technology in the development of navigational lights has resulted in the installation of complex directional navigation lights with multiple sectors, colours and characteristics, some with oscillating sectors, in many areas where navigation is restricted. These lights may have up to 7 sectors, with the central sector being a very narrow, sometimes intensified, fixed white sector performing the directional function of the light. In the IALA A System, the sectors flanking this directional light may be alternating and oscillate increasingly from white to green (to starboard) and red (to port) with increasing deviation from the track defined by the directional light. These lights will normally be flanked by narrow sectors of fixed green (to starboard) and red (to port). Additionally, there may be outer sectors that are occulting green (to starboard) and red (to port) which oscillate with increasing period of eclipse to isophased or flashing with increasing deviation from the track defined by the directional light. For the IALA B System the colours are reversed. In some cases these complex lights may not conform to IALA. Each of the outer sectors may be very narrow.

If it is required to encode an oscillating light sector, it should be done as follows:

For lights in the IALA A system that are alternating and oscillate increasingly from white to green (to starboard) and red (to port) with increasing deviation from the track defined by the directional light:

LIGHTS: LITCHR = 28 (Alternating); COLOUR = 1,2 (White, Red); SECTR1; SECTR2; SIGPER; SIGGRP; INFORM = *White phase decreases as bearing to light increases*

LIGHTS: LITCHR = 28 (Alternating); COLOUR = 1,4 (White, Green); SECTR1; SECTR2; SIGPER; SIGGRP; INFORM = *White phase increases as bearing to light increases*

For lights in the IALA B system that are alternating and oscillate increasingly from white to red (to starboard) and green (to port) with increasing deviation from the track defined by the directional light; transpose the colours red and green in the above encoding.

For lights in the IALA A system that are occulting green (to starboard) and red (to port) which oscillate with increasing period of eclipse to isophased or flashing with increasing deviation from the track defined by the directional light:

LIGHTS: LITCHR = 8 (Occulting); COLOUR = 3 (Red); SECTR1; SECTR2; SIGPER; SIGGRP; INFORM = *Light phase decreases as bearing to light increases*

LIGHTS: LITCHR = 8 (Occulting); COLOUR = 4 (Green); SECTR1; SECTR2; SIGPER; SIGGRP; INFORM = *Light phase increases as bearing to light increases*

For lights in the IALA B system that are occulting red (to starboard) and green (to port) which oscillate with increasing period of eclipse to isophased or flashing with increasing deviation from the track defined by the directional light; transpose the colours red and green in the above encoding.

Oscillating lights which are not IALA should be encoded similar to the above. For instance, where a light contains white sectors that are occulting and oscillate with increasing period of eclipse to isophased or flashing with increasing deviation from the track defined by the directional light:

For the sector to port of the track defined by the directional light:

LIGHTS: LITCHR = 8 (Occulting); COLOUR = 1 (White); SECTR1; SECTR2; SIGPER; SIGGRP; INFORM = *Light phase decreases as bearing to light increases*

For the sector to starboard of the track defined by the directional light:

LIGHTS: LITCHR = 8 (Occulting); COLOUR = 1 (White); SECTR1; SECTR2; SIGPER; SIGGRP; INFORM = *Light phase increases as bearing to light increases*

Comment [j183]: ENC EB No. 26.

18.5.5 Leading lights (see S-4 – B-475.6)

If it is required to encode a leading light, it must be done using a **LIGHTS** feature, with attribute:

CATLIT = 4,12 - front leading light
4,13 - rear leading light
4,14 - lower leading light

4,15 - upper leading light

Remarks:

- The attribute ORIENT must not be used for leading lights, except for directional lights.
- Even if, on the source, the leading lights are merged into a single symbol, at least one **LIGHTS** feature must be created for each light. These lights must be placed in their true position i.e. where the source (e.g. paper chart) shows a single light with a legend such as *2F.Bu*, further investigation must be done in order to determine the true position of each light, and its full attribution. Compilers should note that where this occurs on paper charts, the position of the light shown on the chart normally corresponds with the rear leading light.
- The leading line must be encoded using the method described in clause X.X.

18.5.6 Directional lights (see S-4 – B-475.7)

Direction (or directional) lights of several types are in use but all have in common a very narrow sector intended to mark a direction to be followed. The narrow sector may be flanked by:

- Unlit sectors or unintensified light.
- Sectors of different colour or character. Some direction lights are so precise that a complete colour change at a sector boundary occurs over an angle of less than 1 minute (0.02°). This corresponds to a lateral distance of just 1 metre at a viewing distance of 3.5 km. In addition the intensity may be maintained right to the edge of the beam, and does not reduce the further the observer is away from the axis.

If it is required to encode a directional light, it must be done using a **LIGHTS** feature, with attribute CATLIT = 1 (directional function) and, if the light is intensified in this sector, with attribute LITVIS = 4 (intensified). If it is required to encode a directional light that comprises a narrow (and sometimes intensified) sector, the sector must be encoded using the attributes SECTR1 and SECTR2, and the attribute ORIENT must be populated with an empty (null) value.

Comment [j184]: ENC EB
No. XX.

The attribute ORIENT must *only* be encoded to indicate the orientation, measured from seaward, of the leading line of the directional light when the attributes SECTR1 and SECTR2 are not populated, or there is no **RECTRC** or **NAVLNE** feature associated with the directional light.

Comment [j185]: ENC EB
No. XX.

If it is required to encode the recommended track and/or navigation line associated with a directional light, it must be done using the methods described in clause X.X. In this case, ORIENT for the directional light must be populated with an empty (null) value.

Comment [j186]: ENC EB
No. XX.

18.5.7 Moiré effect lights (see S-4 – B-475.8)

A moiré effect mark (or variable arrow mark) is a short-range (normally up to 2 km) type of direction "light". Sodium lighting gives a yellow background to a screen (up to 3 m square) on which a vertical black line will be seen by an observer on the centreline, or variable arrow marks when course alteration is needed. The system can be used by day and night. It can also be used as a stop line (seen abeam) for vessels berthing along quays.

If it is required to encode a moiré effect light, it must be done using a **LIGHTS** feature, with attribute CATLIT = 16 (moiré effect).

The attribute ORIENT must *only* be encoded to indicate the orientation, measured from seaward, of the leading line of the moiré effect light when the attributes SECTR1 and SECTR2 are not populated, or there is no **RECTRC** or **NAVLNE** feature associated with the moiré effect light.

Comment [j187]: ENC EB
No. XX.

If it is required to encode the recommended track and/or navigation line associated with a moiré effect light, it must be done using the methods described in clause X.X. In this case, ORIENT for the moiré effect light must be populated with an empty (null) value.

Comment [j188]: ENC EB
No. XX.

18.6 Lighthouses (see S-4 – B-457.3)

If it is required to encode a lighthouse, it must be done using a **LNDMRK** feature (see clause X.X), with attributes CATLMK = 17 (tower) and FUNCTN = 33 (light support) for towers, or using a **BUISGL** feature (see clause X.X), with the attribute FUNCTN = 33, for any other shapes.

If it is required to encode the attributes ELEVAT, HEIGHT and VERLEN for a lighthouse, this must be done as described in clause X.X.

If the lighthouse is extinguished/unlit, this must be indicated by population of the attribute STATUS = 4 (not in use) for the **LNDMRK/BUISGL**, and the **LIGHTS** feature(s) must be removed. Where an old lighthouse is illuminated by floodlights, the additional value of STATUS = 12 (illuminated) must also be populated.

18.7 Various special types of lights

Type	S-4 – B-	CATLIT	Remarks
Subsidiary light	471.8	10	
Aero light	476.1	5	
Air obstruction light	476.2	6	
Fog detector light	477	7	
Bearing light		18	
Flood light	478.2	8	Only to encode flood lights that are visible from seaward. The illuminated structure should be encoded using appropriate object classes, with attribute STATUS = 12 (illuminated)
Synchronised lights	478.3		STATUS = 15. Synchronised lights may be associated using the collection object C_ASSO
Strip light*	478.5	9	See below for strip lights performing the function of an aid to navigation.
Spot light		11	Only to encode spot lights that are visible from seaward. The illuminated feature should be encoded using appropriate object classes, with attribute STATUS = 12 (illuminated)
Emergency light		17	Must be encoded as a separate object to the main LIGHTS object
Horizontally disposed lights	471.8	19	The number of lights must be encoded using attribute MLTYLT
Vertically disposed lights	471.8	20	The number of lights must be encoded using attribute MLTYLT

* It has been reported that in some cases, strip lights are being utilised as aids to navigation. Where strip lights have been encoded in accordance with the table above, the portrayal procedures in the IHO ECDIS Presentation Library do not allow for the light description to be displayed as for other navigational lights in certain ECDIS display modes.

Encoders are therefore advised that where an encoded strip light serves the purpose of an aid to navigation, the attribute CATLIT = 9 (strip light) for the **LIGHTS** feature should not be populated. To identify that the aid to navigation is a strip light, the attribute INFORM should be populated with "Strip light" or equivalent for the **LIGHTS**.

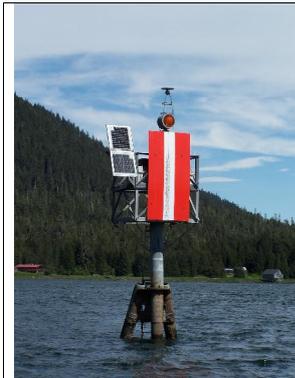

19 Buoys, Beacons

19.1 Daymark

IHO Definition: DAYMARK. The identifying characteristics of an aid to navigation which serve to facilitate its recognition against a daylight viewing background. On those structures that do not by themselves present an adequate viewing area to be seen at the required distance, the aid is made more visible by affixing a daymark to the structure. A daymark so affixed has a distinctive colour and shape depending on the purpose of the aid. (IHO Dictionary – S-32, Edition 5).

INT 1 Reference: Q 130.1

19.2.1 Lateral buoys (see S-4 – B-461.3 and B-467)

Lateral buoys are generally used for well defined channels, in conjunction with a direction of buoyage. They indicate the port and starboard sides of the route to be followed.

To conform to the IALA Maritime Buoyage System (see clause X.X), port hand buoys are usually can, but may be another shape (except conical or spherical). Other shaped buoys have a can topmark. The colour of port hand buoys, topmarks and lights (if fitted) will be red in IALA region A and green in IALA region B.

To conform to the IALA Maritime Buoyage System, starboard hand buoys are usually conical, but may be another shape (except can or spherical). Other shaped buoys have a conical topmark. The colour of starboard hand buoys, topmarks and lights (if fitted) will be green in IALA region A and red in IALA region B.

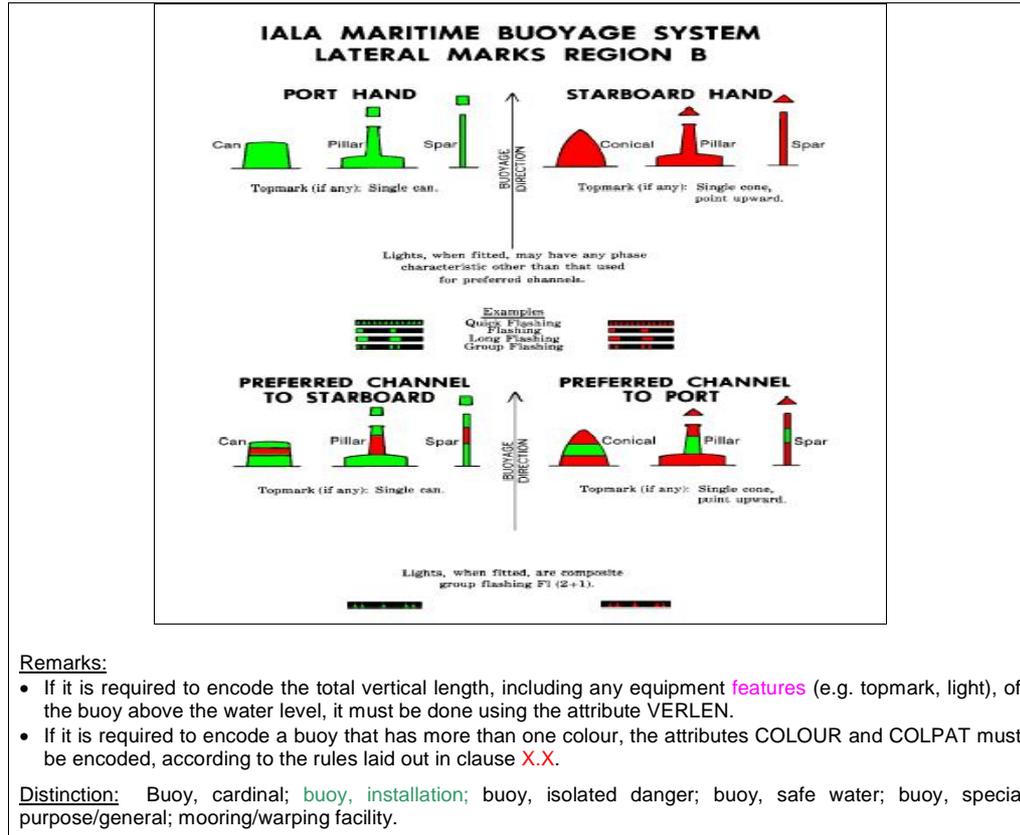

A preferred channel mark is a modified lateral mark, with horizontal colour bands. The shape and predominant colour indicates which side is the preferred channel, the other colour indicates the secondary channel. If fitted, the light is Fl(2+1), the colour indicating the preferred channel.

If it is required to encode a buoy having the function of a lateral mark, it must be done using the feature **BOYLAT**.

Geo feature: Buoy, Lateral (**BOYLAT**)

19.3 Isolated danger buoys

IHO Definition: **BUOY, ISOLATED DANGER**. A buoy is a floating object moored to the bottom in a particular place, as an aid to navigation or for other specific purposes. (IHO Dictionary – S-32).

An isolated danger buoy is a buoy moored on or above an isolated danger of limited extent, which has navigable water all around it. (UKHO NP 735, 5th Edition).

INT 1 Reference: Q 130.4

19.3.1 Isolated danger buoys (see S-4 – B-461.3 and B-467)

Isolated danger buoys are moored above isolated dangers of limited extent with navigable water all around them.

The shape of isolated danger buoys is not significant (although they are usually pillar or spar). To conform to the IALA Maritime Buoyage System (see clause X.X), the body is black, with one or more red bands. Black double-sphere topmarks are an important feature of isolated danger buoys and carried wherever practicable. The light (if fitted) is white FI(2).

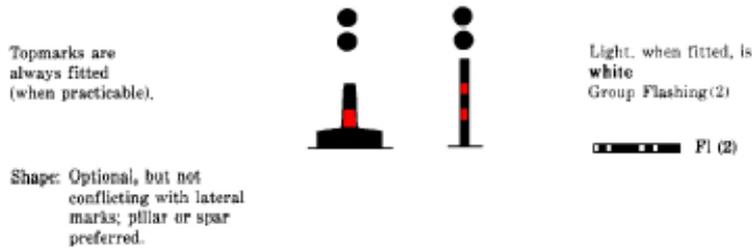

If it is required to encode a buoy having the function of an isolated danger mark, it must be done using the feature **BOYISD**.

Geo feature: Buoy isolated danger (**BOYISD**)

SORIND					

**IALA MARITIME BUOYAGE SYSTEM
REGIONS A AND B
ISOLATED DANGER MARKS**

Remarks:

- If it is required to encode the total vertical length, including any equipment features (e.g. topmark, light), of the buoy above the water level, it must be done using the attribute VERLEN.
- If it is required to encode a buoy that has more than one colour, the attributes COLOUR and COLPAT must be encoded, according to the rules laid out in clause X.X.

Distinction: Buoy, cardinal; buoy, installation; buoy, lateral; buoy, safe water; buoy, special purpose/general; mooring/warping facility.

19.4 Lateral beacons

IHO Definition: BEACON. A beacon is a prominent specially constructed object forming a conspicuous mark as a fixed aid to navigation or for use in hydrographic survey. (IHO Dictionary – S-32).

A lateral beacon is used to indicate the port or starboard hand side of the route to be followed. They are generally used for well defined channels and are used in conjunction with a conventional direction of buoyage. (UKHO NP 735, 5th Edition).

19.4.1 Lateral Beacons (see S-4 – B-461.3 and B-467)

Lateral beacons are generally used for well defined channels, in conjunction with a direction of buoyage. They indicate the port and starboard sides of the route to be followed.

To conform to the IALA Maritime Buoyage System (see clause X.X), port hand beacons have a can topmark. The colour of port hand beacons, topmarks and lights (if fitted) will be red in IALA region A and green in IALA region B.

To conform to the IALA Maritime Buoyage System, starboard hand beacons have a conical topmark. The colour of starboard hand beacons, topmarks and lights (if fitted) will be green in IALA region A and red in IALA region B.

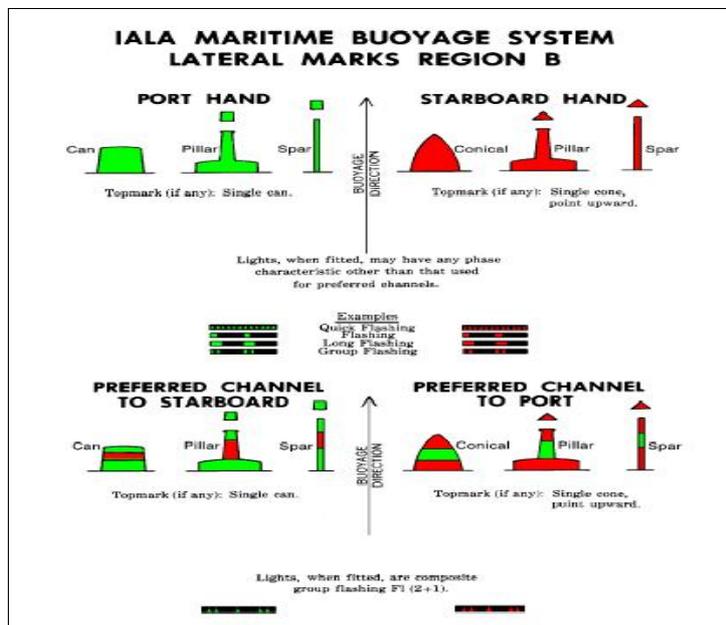

A preferred channel beacon is a modified lateral beacon, with horizontal colour bands. The predominant colour indicates which side is the preferred channel, the other colour indicates the secondary channel. If fitted, the

light is FI(2+1), the colour indicating the preferred channel.

If it is required to encode a beacon having the function of a lateral mark, it must be done using the feature **BCNLAT**.

Geo feature: Beacon lateral (**BCNLAT**)

Attributes: **BCNSHP** **CATLAM** **COLOUR** **COLPAT** **CONDTN** **CONRAD**
CONVIS **DATEND** **DATSTA** **ELEVAT** **HEIGHT** **MARSYS**
NATCON **NOBJNM** **OBJNAM** **PEREND** **PERSTA** **STATUS**
VERLEN **INFOM** **NINFOM** **NTXTDS** **PICREP** **SCAMIN**
TXTDSC **RECDAT** **RECIND** **SORDAT** **SORIND**

Remarks:

- If it is required to encode the altitude of the ground level above the vertical datum at the position of a beacon, it must be done using the attribute **ELEVAT**, but only for beacons built on land.
- If it is required to encode the total altitude of a beacon, including any equipment features (e.g. topmark, light), above the vertical datum, it must be done using the attribute **HEIGHT**.
- If it is required to encode the total vertical length of a beacon, including any equipment features (e.g. topmark, light), above the seabed or ground, it must be done using the attribute **VERLEN**.
- If it is required to encode a cairn that bears the colour(s) specified by a navigational system of marks, it must be done using a beacon feature.
- If it is required to encode a beacon that has more than one colour, the attributes **COLOUR** and **COLPAT** must be encoded, according to the rules laid out in clause **X.X**.

Distinction: Beacon, cardinal; beacon, isolated danger; beacon, safe water; beacon, special purpose/general; daymark.

19.5 Special purpose/general beacons

IHO Definition: BEACON. A beacon is a prominent specially constructed object forming a conspicuous mark as a fixed aid to navigation or for use in hydrographic survey. (IHO Dictionary – S-32).
 A special purpose beacon is primarily used to indicate an area or feature, the nature of which is apparent from reference to a chart, Sailing Directions or Notices to Mariners. (UKHO NP 735, 5th Edition).
 Beacon in general: A buoy whose appearance or purpose is not adequately known. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.12, November 2000).

19.5.1 Special purpose/general beacons (see S-4 – B-461.3 and B-467)

Special beacons are used to indicate to the mariner a special area or feature, the nature of which is usually apparent from the chart or associated publication.

To conform to the IALA Maritime Buoyage System (see clause X.X), the body of the beacon is yellow. The topmark (if fitted) is a yellow diagonal 'X' (St Andrew's cross). Lights (if fitted) are yellow and of any rhythm except those used for cardinal, isolated danger and safe water marks.

If it is required to encode a beacon having the function of a special purpose mark, or a beacon whose appearance or purpose is inadequately known, it must be done using the feature **BCNSPP**.

Remarks:

- If it is required to encode the altitude of the ground level above the vertical datum at the position of a beacon, it must be done using the attribute ELEVAT, but only for beacons built on land.
- If it is required to encode the total altitude of a beacon, including any equipment **features** (e.g. topmark, light), above the vertical datum, it must be done using the attribute HEIGHT.
- If it is required to encode the total vertical length of a beacon, including any equipment **features** (e.g. topmark, light), above the seabed or ground, it must be done using the attribute VERLEN.
- If it is required to encode a cairn that bears the colour(s) specified by a navigational system of marks, it must be done using a beacon **feature**.
- If it is required to encode a beacon that has more than one colour, the attributes COLOUR and COLPAT must be encoded, according to the rules laid out in clause X.X.

Distinction: Beacon, cardinal; beacon, isolated danger; beacon, lateral; beacon, safe water; daymark.

19.6 Special purpose/general buoys

IHO Definition: BUOY, SPECIAL PURPOSE/GENERAL. A buoy is a floating object moored to the bottom in a particular place, as an aid to navigation or for other specific purposes. (IHO Dictionary – S-32).
 A special purpose buoy is primarily used to indicate an area or feature, the nature of which is apparent from reference to a chart, Sailing Directions or Notices to Mariners. (UKHO NP 735, 5th Edition).
 Buoy in general: A buoy whose appearance or purpose is not adequately known. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.24, November 2000).

19.6.1 Special purpose/general buoys (see S-4 – B-461.3 and B-467)

Special marks are used to indicate to the mariner a special area or feature, the nature of which is usually apparent from the ENC, paper chart or associated publication. Special marks may also be used to mark a channel within a channel (e.g. a Deep Water route), using yellow buoys of the appropriate lateral shape, or yellow spherical buoys to mark the centreline. A special buoy may be any shape but must not conflict with lateral or safe water marks (e.g. an outfall buoy on the port-side of a channel could be conical but should not be conical).

To conform to the IALA Maritime Buoyage System (see clause X.X), the body of the buoy is yellow. The topmark (if fitted) is a yellow diagonal 'X' (St Andrew's cross). Lights (if fitted) are yellow and of any rhythm except those used for cardinal, isolated danger and safe water marks.

If it is required to encode a buoy having the function of a special purpose mark, or a buoy whose appearance or purpose is inadequately known, it must be done using the feature **BOYSPP**.

Geo feature: Buoy, Special purpose/general (**BOYSPP**)

19.7.1 Safe water buoys (see S-4 – B-461.3 and B-467)

Safe water marks are used to indicate there is safe water all around the mark. It may be used as a centre-line, mid-channel or landfall buoy, or to mark the best point of passage under a bridge.

To conform to the IALA Maritime Buoyage System (see clause X.X), the shape of a safe water buoy is spherical, pillar or spar. The body of the mark has red and white vertical stripes. A red spherical topmark is an important feature if the buoy is not spherical and carried wherever practicable. The light (if fitted) is white Oc, Iso, LFI or Mo(A) with a period of 10s.

If it is required to encode a buoy having the function of a safe water mark, it must be done using the feature **BOYSAW**.

Geo feature: Buoy, safe water (**BOYSAW**)

Remarks:

- If it is required to encode the altitude of the ground level above the vertical datum at the position of a beacon, it must be done using the attribute ELEVAT, but only for beacons built on land.
- If it is required to encode the total altitude of a beacon, including any equipment features (e.g. topmark, light), above the vertical datum, it must be done using the attribute HEIGHT.
- If it is required to encode the total vertical length of a beacon, including any equipment features (e.g.

topmark, light), above the seabed or ground, it must be done using the attribute VERLEN.

- If it is required to encode a cairn that bears the colour(s) specified by a navigational system of marks, it must be done using a beacon **feature**.
- If it is required to encode a beacon that has more than one colour, the attributes COLOUR and COLPAT must be encoded, according to the rules laid out in clause **X.X**.

Distinction: Beacon, cardinal; beacon, isolated danger; beacon, lateral; beacon, special purpose/general; daymark.

19.13 Isolated danger beacons

IHO Definition: **BEACON ISOLATED DANGER.** A beacon is a prominent, specially constructed object forming a conspicuous mark as a fixed aid to navigation or for use in hydrographic survey. (IHO Dictionary – S-32).

An isolated danger beacon is a beacon erected on an isolated danger of limited extent, which has navigable water all around it. (UKHO NP735, 5th Edition).

19.13.1 Isolated danger beacons (see S-4 – B-461.3 and B-467)

Isolated danger beacons are placed on isolated dangers of limited extent with navigable water all around them.

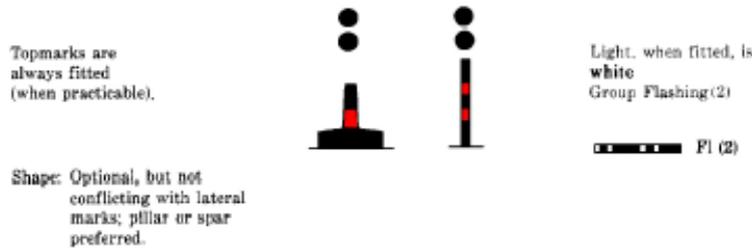

To conform to the IALA Maritime Buoyage System (see clause X.X), the body of an isolated danger beacon is black, with one or more red bands. Black double-sphere topmarks are an important feature of isolated danger beacons and carried wherever practicable. The light (if fitted) is white FI(2).

If it is required to encode a beacon having the function of an isolated danger mark, it must be done using the feature **BCNISD**.

 ISOLATED DANGER MARKS**

Remarks:

- If it is required to encode the altitude of the ground level above the vertical datum at the position of a beacon, it must be done using the attribute ELEVAT, but only for beacons built on land.
- If it is required to encode the total altitude of a beacon, including any equipment features (e.g. topmark,

light), above the vertical datum, it must be done using the attribute HEIGHT.

- If it is required to encode the total vertical length of a beacon, including any equipment features (e.g. topmark, light), above the seabed or ground, it must be done using the attribute VERLEN.
- If it is required to encode a cairn that bears the colour(s) specified by a navigational system of marks, it must be done using a beacon feature.
- If it is required to encode a beacon that has more than one colour, the attributes COLOUR and COLPAT must be encoded, according to the rules laid out in clause X.X.

Distinction: Beacon, cardinal; beacon, lateral; beacon, safe water; beacon, special purpose/general; daymark.

19.14 Installation buoys

IHO Definition: **BUOY INSTALLATION**. A buoy is a floating object moored to the bottom in a particular place, as an aid to navigation or for other specific purposes. (IHO Dictionary – S-32).

An installation buoy is a buoy used for loading tankers with gas or oil. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.20, November 2000).

19.14.1 Installation buoys (see S-4 – B-445.4)

Although the oil and gas from some fields are sent ashore by submarine pipeline, a variety of mooring systems have been developed for use in deep water and in the vicinity of certain ports, to allow the loading of large vessels and the permanent mooring of floating storage vessels or units. These offshore systems include large mooring buoys, designed for mooring vessels up to 500,000 tonnes, and platforms on structures fixed at their lower ends to the sea floor. They allow a vessel to moor forward or aft to them, and to swing to the wind or stream, and are termed installation buoys.

If it is required to encode an installation buoy, it must be done using the feature **BOYINB**.

Geo feature: Buoy installation, (**BOYINB**)
 Attributes: **BOYSHP** **CATINB** **COLOUR** **COLPAT** **CONRAD** **DATEND**

Remarks:

- The light on a light float is a separate feature, handled as with buoys, beacons, etc.

Distinction: Buoy, cardinal; buoy, installation; buoy, isolated danger; buoy, lateral; buoy, safe water; buoy, special purpose/general; light vessel.

19.16 Light vessels

IHO Definition: LIGHT VESSEL. A distinctively marked vessel anchored or moored at a charted point, to serve as an aid to navigation. By night, it displays a characteristic light(s) and is usually equipped with other devices, such as fog signal, submarine sound signal, and radio-beacon, to assist navigation. Also called light ship. (IHO Dictionary – S-32).

Extension 06/01.

INT 1 Reference: P 6

19.16.1 Lights vessels (see S-4 – B-474.1-3)

Major floating lights are generally classed as those with a nominal range in excess of 10 nautical miles. Special circumstances, e.g. an isolated location, may mean that a floating light of lower range is given this status. The structure on which the light is fixed will be a light vessel, a major light float or a LANBY (Large Automatic Navigational Buoy, which is a type of superbuoy).

If it is required to encode a light vessel, it must be done using the **feature LITVES**.

Geo **feature:** Light vessel (**LITVES**)

		<p>SIGSEQ (O) Signal sequence</p>		A
		<p>STATUS (O) Status</p>	<p>1 : permanent 2 : occasional 4 : not in use 5 : periodic/intermittent 7 : temporary 8 : private 15 : synchronized</p>	L
		<p>VALMXR (O) Value of maximum range</p>		F
		<p>INT 1 Reference: R 1, 10-16, 20-22 19.18.1 Fog signals (see S-4 – B-451-454)</p>		

The term “fog signal” refers to the sound emitted, not the apparatus. Fog signals are short range aids to navigation, principally used as hazard warnings. For various reasons they are unreliable as indicators of position. Their importance relative to other aids to navigation has declined but they are still considered useful for the safe navigation of vessels with very limited (or non-functioning) electronic equipment. A fog signal should be shown on ENC’s at an optimum display scale on which vessels may navigate within range.

The position from which a fog signal is emitted is usually on a buoy, or close enough to a light to be treated as sounded from the same position as the light.

If it is required to encode a fog signal, it must be done using the feature **FOGSIG**.

Geo feature: Fog signal (**FOGSIG**)

Attributes:	CATFOG	DATEND	DATSTA	NOBJNM	OBJNAM	PEREND
	PERSTA	SIGFRQ	SIGGEN	SIGGRP	SIGPER	SIGSEQ
	STATUS	VALMXR	INFORM	NINFOM	NTXTDS	SCAMIN
	TXTDSC	RECDAT	RECIND	SORDAT	SORIND	

Comment [j213]: S-57
Supplement No. 2.

Remarks:

- The characteristic rhythm of fog signals (other than those actuated by waves, which are irregular) may be more important than their type when mariners are attempting to identify them. The number of sound emissions (e.g. blasts, strokes) and the period must therefore be encoded, where known, using the attributes SIGGRP, SIGPER and SIGSEQ.

Distinction: Signal station, warning.

20 Radar, Radio

20.1 Radio station

IHO Definition: RADIO STATION. A place equipped to transmit radio waves. Such a station may be either stationary or mobile, and may also be provided with a radio receiver. In British terminology, also called w/t station. (IHO Dictionary – S-32).

INT 1 Reference: S 2-3

20.2.1 Radar beacons (see S-4 – B-486)

Radar beacons are transmitters operating in the marine radar frequency band. The signals produce a characteristic line on a vessel's radar display enabling the mariner to determine their position with greater certainty than would be possible by means of a normal radar display alone.

If it is required to encode a radar beacon, it must be done using the feature **RTPBCN**.

Geo feature: Radar transponder beacon (**RTPBCN**)

Attributes: **CATRTB** **DATEND** **DATSTA** **NOBJNM** **OBJNAM** **PEREND**

Extension 06/01 and Supplement
No. 2.

SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- The **RTPBCN** must only be used to encode the technical equipment itself, independent of the building or structure in which it is installed. If it is required to encode the building or structure (e.g. mast, tower, radar dome), it must be done using an appropriate **feature** (e.g. **BUISGL**, **LNDMRK**).
- **Leading racons are established such that, when their bearing lines are coincident on a vessel's radar display, the bearing serves to indicate the track to be followed.** If it is required to encode the bearing line and the recommended track for leading racons, it must be done as described in clause **X.X**. Where the bearing line coincides with a leading line defined by lights or other visual features making up a range system, navigation lines and recommended tracks must not be duplicated. The **features** making up the range system must be aggregated using **the collection feature C_AGGR** (see clause **X.X**).
- **If, for some reason, the radar transponder beacon signal is obscured between certain bearings, this information should be encoded using the attributes SECTR1 and SECTR2 to encode the "visible" sector, as for lights (see clause X.X).**
- The sweep period may be encoded using the attribute **INFORM**.

Distinction: Radar line; radar range; radar station.

21 Services

21.1 Pilot boarding place

IHO Definition: **PILOT BOARDING PLACE.** A location offshore where a pilot may board a vessel in preparation to piloting it through local waters. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Comment [j217]: S-57
Extension 06/01.

INT 1 Reference: T 1.1-4

21.1.1 Pilot boarding places (see S-4 – B-491.1-2)

For a pilot boarding place, the pilot vessel may either cruise in the area or come out on request. Off some large ports pilots on outgoing ships may be disembarked at a different location. Pilots may board from a helicopter; it is then less important for a ship to reach the exact position of the boarding place but an approximate position should still be encoded. Some pilot stations are used solely for long-distance (deep-sea) pilots. Pilots may be in constant attendance, in regular attendance at certain limited times, or available by previous arrangement only. The primary purpose of encoded pilotage information is to show the position of the facility. Because of the many variations in the service provided, the main source of information on pilotage must be in an associated publication or product.

If it is required to encode a pilot boarding place, it must be done using the feature **PILBOP**.

Geo feature: Pilot boarding place (**PILBOP**)

INT 1 Reference: T 10, 11

21.2.1 Coastguard stations (see S-4 – B-492)

The organisation of coast-watching and rescue services differs from country to country. For charting purposes it is assumed that two distinct functions can be recognised, even though they may be parts of the same organisation co-ordinating and effecting life saving and performing other services. Coastguard stations are stations at which a watch is kept either continuously, or at certain times only. They are sited so as to have a commanding view, are often associated with signal stations, and are visually prominent. They are also referred to as watch-keeping stations.

Coastguard stations are located along the coasts of most maritime nations. Their primary purpose in former days was to enforce customs regulations, observe the movements of ships and to watch for signs of distress at sea. These functions are largely superseded by modern telecommunications and Search & Rescue (SAR) arrangements, coordinated by regional Maritime Rescue and Coordination Centres (MRCC).

If it is required to encode a coastguard station, it must be done using the **feature CGUSTA**.

Geo feature: Coastguard station (**CGUSTA**)

Attributes: DATEND DATSTA NOBJNM OBJNAM PEREND PERSTA
STATUS INFORM NINFOM NTXTDS SCAMIN TXTDSC
RECDAT RECIND SORDAT SORIND

Remarks:

- Many modern Coastguard services no longer maintain visual watch from fixed stations. However, because stations were usually situated so as to have a commanding view and may therefore be visually prominent and make good fixing marks, the buildings may still be encoded as **BUISGL** or **LNDMRK**.
- The **CGUSTA** must only be used to describe the function of the coastguard station, independent of the building or structure itself. If it is required to encode the building or structure in which the coastguard station operates, it must be done using an appropriate **feature** (e.g. **BUISGL**, **LNDMRK**).

Distinction: Building, single; rescue station.

21.3 Warning signal stations

IHO Definition: SIGNAL STATION, WARNING. A signal station is a place on shore from which signals are made to ships at sea. (IHO Dictionary – S-32).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	SISTAW (P)	CATSIW (M) Category of signal station, warning	1 : danger 2 : maritime obstruction 3 : cable 4 : military practice 5 : distress 6 : weather 7 : storm 8 : ice 9 : time 10 : tide 11 : tidal stream 12 : tide gauge 13 : tide scale 14 : diving 15 : water level gauge	L

INT 1 Reference: T 20, 26, 28-36

21.3.1 Warning signal stations (see S-4 – B-494; B-496-7)

Signal stations communicating visually have declined in importance. They are encoded on the largest optimum display scale ENC data not only for their main role of signalling information and instructions but also as a form of landmark. The signals generally exhibit lights by day and night but may display shapes or flags by day.

If it is required to encode a warning signal station, it must be done using the feature **SISTAW**.

Geo feature: Signal station, warning (**SISTAW**)
 Attributes: CATSIW COMCHA DATEND DATSTA NOBJNM OBJNAM
 PEREND PERSTA STATUS INFORM NINFOM NTXTDS
 SCAMIN TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- The **SISTAW** must only be used to describe the function of the signal station, independent of the building or structure itself. If it is required to encode the building or structure housing the service, it must be done using

an appropriate **feature** (e.g. **BUISGL**, **LNDMRK**).

Distinction: Signal station, traffic.

21.4 Traffic signal stations

IHO Definition: **SIGNAL STATION, TRAFFIC.** A signal station is a place on shore from which signals are made to ships at sea. (IHO Dictionary – S-32).

Traffic signal stations regulate the movement of traffic. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.155, November 2000).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type

INT 1 Reference: T 21-25.2

21.4.1 Traffic signal stations (see S-4 – B-494-5)

Signal stations communicating visually have declined in importance. They are encoded on the largest optimum display scale ENC data not only for their main role of signalling information and instructions but also as a form of landmark. The signals generally exhibit lights by day and night but may display shapes or flags by day.

The nature of traffic signals varies from country to country and even from port to port. For charting purposes traffic signals can be considered to include:

- Port entry and departure signals;
- Lock, docking and berthing signals;
- Bridge signals;
- International traffic signals.

If it is required to encode a traffic signal station, it must be done using the feature **SISTAT**.

Geo feature: Signal station, traffic (**SISTAT**)

Attributes: COMCHA DATEND DATSTA NOBJNM OBJNAM PEREND
PERSTA STATUS INFORM NINFOM NTXTDS SCAMIN

TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- If it is required to encode a bridge light marking the centre of a navigable span, it must be done using the **feature LIGHTS**.
- The **SISTAT** must only be used to describe the function of the signal station, independent of the building or structure itself. If it is required to encode the building or structure housing the service, it must be done using an appropriate **feature** (e.g. **BUISGL**, **LNDMRK**).

Distinction: Signal station, warning.

21.5 Rescue station

IHO Definition: **RESCUE STATION.** A place at which life saving equipment is held. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.140, November 2000).

Graphic	S-101 Geo Feature	S-101 Attribute	Allowable Encoding Value	Attrib. Type
<i>Real World</i>	RSCSTA (P)	CATRSC (O) Category of rescue station	1 : rescue station with lifeboat 2 : rescue station with rocket 4 : refuge for shipwrecked mariners 5 : refuge for intertidal area walkers 6 : lifeboat lying at a mooring 7 : aid radio station 8 : first aid equipment	L
<i>Paper Chart Symbol</i>		STATUS (O) Status	1 : permanent 2 : occasional 4 : not in use 5 : periodic/intermittent 7 : temporary 8 : private 14 : public 16 : watched 17 : un-watched	L
<i>ECDIS Symbol</i>				

INT 1 Reference: T 12-14, Q 124

21.5.1 Rescue station (see S-4 – B-490 and B-493)

The organisation of coast-watching and rescue services differs from country to country. For charting purposes it is assumed that these two distinct functions can be recognised individually, even though they may be parts of the same organisation co-ordinating and effecting life saving and performing other services.

Rescue stations are the places at which life saving equipment is held, especially lifeboats (usually in relatively sheltered positions, near sea level). Rescue stations are not necessarily visually prominent. The range of equipment used in rescue is wide, e.g. search and rescue helicopters; fast, long-distance lifeboats; inflatable inshore lifeboats.

If it is required to encode a rescue station, it must be done using the **feature RSCSTA**.

Geo feature: Rescue station (**RSCSTA**)

Attributes: CATRSC DATEND DATSTA NOBJNM OBJNAM PEREND
PERSTA STATUS INFORM NINFOM NTXTDS SCAMIN
TXTDSC RECDAT RECIND SORDAT SORIND

Remarks:

- The **RSCSTA** must only be used to describe the function of the rescue station, independent of the building or structure itself. If it is required to encode the building or structure housing the service, it must be done using an appropriate **feature** (e.g. **BUISGL**, **LNDMRK**).
- If it is required to encode a refuge beacon, it must be done using a **BCNSPP feature**, with attribute CATSPM = 44 (refuge beacon), not by using **RSCSTA**.

Distinction: Beacon special purpose/general; building single; coastguard station.

21.6 Harbour facility

IHO Definition: HARBOUR FACILITY. A Harbour installation with a service or commercial operation of public interest. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.81, November 2000).

	RECIND	SORDAT	SORIND			

Remarks:

- Fishing harbours or ports are equipped to provide for the particular needs of fishing boats. Boat harbours and marinas are areas of sheltered water, generally within harbours or ports, set aside for the use of small craft, usually with moorings, buoys, and, in the case of marinas, berthing facilities.
- Depending on the navigational purpose, harbour facilities are defined by: an area including docks, basins, and dockside equipment; or a point.

Distinction: Small craft facility.

Comment [j222]: S-57
Extension 06/01.

21.7 Small craft facility

IHO Definition: SMALL CRAFT FACILITY. A place at which a service generally of interest to small craft or pleasure boats is available. (S-57, Appendix A – Chapter 1, Edition 3.1, Page 1.162, November 2000).

22 Feature Attribute and Enumerate Descriptions

22.1 Beacon shape (BCNSHP)

Beacon Shape: IHO Definition: Describes the characteristic geometric form of the beacon. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

1) **Stake, pole, perch, post**

IHO Definition: An elongated wood or metal pole, driven into the ground or seabed, which serves as a navigational aid or a support for a navigational aid. (Adapted from IHO Dictionary – S-32).

Comment [j223]: MD8 - 7.Cl.12 and 7.Co.12.

2) **Withy**

IHO Definition: A tree without roots stuck or spoiled into the bottom of the sea to serve as a navigational aid. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.5, November 2000).

3) **Beacon tower**

IHO Definition: A solid structure of the order of 10 metres in height used as a navigational aid. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.5, November 2000).

4) **Lattice beacon**

IHO Definition: A structure consisting of strips of metal or wood crossed or interlaced to form a structure to serve as an aid to navigation or as a support for an aid to navigation. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.5, November 2000).

5) **Pile beacon**

IHO Definition: A long heavy timber(s) or section(s) of steel, wood, concrete, etc., forced into the seabed to serve as an aid to navigation or as a support for an aid to navigation. (Adapted from IHO Dictionary – S-32 and Navigation Dictionary, US National Oceanic and Atmospheric Administration - NOAA, 1969).

6) **Cairn**

IHO Definition: A mound of stones, usually conical or pyramidal, raised specifically for maritime navigation. (Adapted from IHO Dictionary – S-32).

7) **Buoyant beacon**

IHO Definition: A tall spar-like beacon fitted with a permanently submerged buoyancy chamber, the lower end of the body is secured to seabed sinker either by a flexible joint or by a cable under tension. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.5, November 2000).

Remarks:

- The beacon shape describes the characteristic geometric form of the beacon.

22.2 Building shape (BUISHP)

Building shape: IHO Definition:

5) **High-rise building**

IHO Definition: A building having many storeys. (The New Shorter Oxford English Dictionary, 1993).

6) **Pyramid**

IHO Definition: A polyhedron of which one face is a polygon of any number of sides, and the other faces are triangles with a common vertex. (The New Shorter Oxford English Dictionary, 1993).

7) **Cylindrical**

IHO Definition: Shaped like a cylinder, which is a solid geometrical figure generated by straight lines fixed in

direction and describing with one of its points a closed curve, especially a circle. (The New Shorter Oxford English Dictionary, 1993).

8) **Spherical**

IHO Definition: Shaped like a sphere, which is a body the surface of which is at all points equidistant from the centre. (The New Shorter Oxford English Dictionary, 1993).

9) **Cubic**

IHO Definition: A shape the sides of which are six equal squares; a regular hexahedron. (The New Shorter Oxford English Dictionary, 1993).

22.3 Buoy shape (BOYSHP)

Buoy shape: IHO Definition: The principal shape and/or design of a buoy. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

1) **Conical (nun, ogival)**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure, has approximately the shape or the appearance of a pointed cone with the point upwards. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.7, November 2000).

2) **Can (cylindrical)**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure, has the shape of a cylinder, or a truncated cone that approximates to a cylinder, with a flat end uppermost. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.7, November 2000).

3) **Spherical**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure, has the shape of a part of a sphere. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.7, November 2000).

4) **Pillar**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure is a narrow vertical structure, pillar or lattice tower. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.7, November 2000).

5) **Spar (spindle)**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure, has the form of a pole, or of a very long cylinder, floating upright. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.7, November 2000).

6) **Barrel (tun)**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure, has the form of a barrel or cylinder floating horizontally. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.7, November 2000).

7) **Superbuoy**

IHO Definition: A very large buoy designed to carry a signal light of high luminous intensity at a high elevation. (IHO Dictionary – S-32).

8) **Ice buoy**

IHO Definition: A specially constructed shuttle shaped buoy which is used in ice conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.7, November 2000).

Remarks:

- The principal shapes are those recommended in the International Association of Lighthouse Authorities - IALA

System.

22.4 Buried depth (BURDEP)

Buried depth: IHO Definition: The depth below the seabed to which an object is buried. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.8, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0-1m

Format: xx.x

Example: 2.5 for a depth of 2.5 metres

22.5 Call sign (CALSGN)

Call sign: IHO Definition: The designated call-sign of a radio station | pilot | ... (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.9, November 2000 (as amended)) | **UP TO HERE 11/11/10. (Alternate definitions).**

Comment [j224]: MD8 – 5.Co.1.

Comment [j225]: S-57 Extension 06/01.

22.6 Category of airport/airfield (CATAIR)

Category of airport/airfield: IHO Definition:

1) Military aeroplane airport

IHO Definition: A large military airfield usually equipped with a control tower, hangars and accommodation for the receiving and discharging of passengers or cargo. (Adapted from The Macquarie Dictionary, 1988).

2) Civil aeroplane airport

IHO Definition: A large airfield usually equipped with a control tower, hangars and accommodation for the receiving and discharging of passengers or cargo. (The Macquarie Dictionary, 1988).

3) Military heliport

IHO Definition: A landing place for helicopters controlled by the military. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.10, November 2000).

4) Civil heliport

IHO Definition: A landing place for helicopters, often the roof of a building. (The Macquarie Dictionary, 1988).

5) Glider airfield

IHO Definition: An area of land set aside for the take-off and landing of gliders. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.10, November 2000).

6) Small planes airfield

IHO Definition: An area of land set aside for the take-off and landing of small aeroplanes. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.10, November 2000).

8) Emergency airfield

IHO Definition: An area of land set aside for the take-off and landing of aeroplanes or helicopters in times of emergency. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.10, November 2000).

22.7 Category of anchorage (CATACH)

Category of anchorage: IHO Definition:

1) **Unrestricted anchorage**

IHO Definition: An area in which vessels anchor or may anchor. (IHO Dictionary – S-32).

2) **Deep water anchorage**

IHO Definition: An area in which vessels of deep draught anchor or may anchor. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.11, November 2000).

3) **Tanker anchorage**

IHO Definition: An area in which tankers anchor or may anchor. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.11, November 2000).

4) **Explosives anchorage**

IHO Definition: An area set apart for anchored ships discharging or receiving explosives. (IHO Dictionary – S-32).

5) **Quarantine anchorage**

IHO Definition: An area where a vessel anchors when satisfying quarantine regulations. (IHO Dictionary – S-32).

6) **Seaplane anchorage**

IHO Definition: An area in which seaplanes anchor or may anchor. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.11, November 2000).

7) **Small craft anchorage**

IHO Definition: An area in which yachts and small boats anchor or may anchor. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.11, November 2000).

8) **Small craft mooring area**

IHO Definition: An area in which yachts and small boats moor. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.11, November 2000).

9) **Anchorage for periods up to 24 hours**

IHO Definition: An area in which vessels anchor or may anchor for periods of up to 24 hours. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.11, November 2000).

10) **Anchorage for a limited period of time**

IHO Definition: An area in which vessels may anchor for a period of time not to exceed a specific limit. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.11, November 2000).

22.8 Category of bridge (CATBRG)

Category of bridge: IHO Definition:

1) **Fixed bridge**

IHO Definition: A bridge having permanent horizontal and vertical alignment. (McGraw-Hill Dictionary of Scientific and Technical Terms, 3rd Edition, 1984).

2) **Opening bridge**

IHO Definition: A bridge that is closed when set for carrying road traffic and open when set to permit marine traffic to pass through the waterway it crosses. Modern opening (movable) bridges are either bascule, vertical lift or swing. (Adapted from McGraw-Hill Encyclopedia of Science and Technology, 7th Edition, 1992).

3) **Swing bridge**

IHO Definition: A movable bridge (or span thereof) which rotates in a horizontal plane about a vertical pivot to allow the passage of vessels. (Adapted from McGraw-Hill Encyclopedia of Science and Technology, 7th Edition, 1992).

4) **Lifting bridge**

IHO Definition: A movable bridge (or span thereof) which is capable of being lifted vertically to allow vessels to pass beneath. (Adapted from IHO Dictionary – S-32).

5) **Bascule bridge**

IHO Definition: A counterpoise bridge rotated in a vertical plane about an axis at one or both ends. Also called a balance bridge. (IHO Dictionary – S-32).

6) **Pontoon bridge**

IHO Definition: A fixed floating bridge supported by pontoons. (McGraw-Hill Dictionary of Scientific and Technical Terms, 3rd Edition, 1984).

7) **Draw bridge**

IHO Definition: A general name for bridges of which part or the entire span of the bridge may be raised or drawn aside to allow ships to pass through. (IHO Dictionary – S-32).

8) **Transporter bridge**

IHO Definition: Consists of towers on each side of the watercourse connected by a system of girders on which a carriage runs. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

9) **Footbridge**

IHO Definition: A bridge structure used only for pedestrian traffic. (McGraw-Hill Dictionary of Scientific and Technical Terms, 3rd Edition, 1984).

10) **Viaduct**

IHO Definition: A long bridge consisting of a series of beams, spans or girders (of steel, timber or concrete) supported on towers or piers and used to carry a road, railroad, etc. (Adapted from McGraw-Hill Encyclopedia of Science and Technology, 7th Edition, 1992).

11) **Aqueduct**

IHO Definition: A bridge supporting an artificially elevated channel, for the conveyance of water. (Adapted from The New Shorter Oxford English Dictionary, 1993).

12) **Suspension bridge**

IHO Definition: A fixed bridge consisting of either a roadway or a truss suspended from two or more cables which pass over towers and are anchored by backstays to a firm foundation. (McGraw-Hill Encyclopaedia of Science and Technology, 7th Edition, 1992).

22.9 Category of built-up area (CATBUA)

Category of built-up area: IHO Definition:

1) **Urban area**

IHO Definition: An area predominantly occupied by man-made structures used for residential, commercial, and industrial purposes. (Nautical Chart Manual, US Department of Commerce, 1992).

2) **Settlement**

IHO Definition: A continuously occupied concentration of tents or lightweight fixed structures (for example: huts) serving as residences. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Village**

IHO Definition: A self-contained group of houses and associated buildings, usually in a country area. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **Town**

IHO Definition: An inhabited place larger and more regularly built and with more complete and independent local government than a village but **not incorporated** as a city. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **City**

IHO Definition: A major town inhabited by a large permanent community with all essential services. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **Holiday village**

IHO Definition: A complex for holiday-makers with cottages, shops, and entertainment, on site, **which is mainly populated on a seasonal basis**. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

22.10 Category of cable (CATCBL)

Category of cable: IHO Definition:

1) **Power line**

IHO Definition: A cable that transmits or distributes electrical power. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Transmission line**

IHO Definition: Multiple un-insulated cables usually supported by steel lattice towers. Such features are generally more prominent than normal power lines. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.16, November 2000).

4) **Telephone**

IHO Definition: A cable that transmits telephone signals. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **Telegraph**

IHO Definition: A cable that transmits telegraph signals. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **Mooring cable/chain**

IHO Definition: A cable or chain used to secure a mooring buoy or other floating structure. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.16, November 2000).

22.11 Category of canal (CATCAN)

Category of canal: IHO Definition:

1) **Transportation**

IHO Definition: A canal used for navigation as part of a transport system. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.17, November 2000).

2) **Drainage**

IHO Definition: A canal used to drain excess water from surrounding land. (S-57, Appendix A – Chapter 2, Edition

3.1, Page 2.17, November 2000).

3) Irrigation

IHO Definition: A canal used to supply water for the purpose of irrigation. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.17, November 2000).

22.12 Category of cardinal mark (CATCAM)

Category of cardinal mark: **IHO Definition:** The four quadrants (north, east, south and west) are bounded by the true bearings NW-NE, NE-SE, SE-SW and SW-NW taken from the point of interest.

A cardinal mark is named after the quadrant in which it is placed.

The name of the cardinal mark indicates that it should be passed to the named side of the mark. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.18, November 2000).

- 1) North cardinal mark
- 2) East cardinal mark
- 3) South cardinal mark
- 4) West cardinal mark

Remarks:

- Cardinal marks do not have a distinctive shape but are normally pillar or spar. To conform to the IALA Maritime Buoyage System, they are always painted in yellow and black horizontal bands and their distinctive double cone top-marks are always black. (Note that such top-marks are encoded as separate TOPMAR features). Cardinal marks may also have a special system of flashing white lights and if such lights are fitted they are encoded as separate LIGHTS features.

22.13 Category of checkpoint (CATCHP)

Category of checkpoint: **IHO Definition:**

1) Custom

IHO Definition: Serves as a government checkpoint where customs duties are collected, the flow of goods are regulated and restrictions enforced, and shipments or vehicles are cleared for entering or leaving a country. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

22.14 Category of coastline (CATCOA)

Category of coastline: **IHO Definition:**

1) Steep coast

IHO Definition: A coast backed by rock or earth cliffs, which gives a good radar return and is useful for visual identification from a considerable distance off, where cliffs alternate with low lying coast along the shoreline. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.20, November 2000).

2) Flat coast

IHO Definition: A level coast with no obvious topographic features. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.20, November 2000).

3) Sandy shore

IHO Definition: A shoreline area made up of sand, i.e. loose material consisting of small but easily distinguishable, separate grains, between 0.0625 and 2.000 millimetres in diameter. (Adapted from IHO

Dictionary – S-32).

4) **Stony shore**

IHO Definition: A shoreline area made up of rock and rock fragments ranging in size from pebbles and gravel to boulders or large rock masses. (Adapted from IHO Dictionary – S-32).

5) **Shingly shore**

IHO Definition: A shoreline area made up of rounded, often flat waterworn rock fragments larger than approximately 16 millimetres. (Adapted from IHO Dictionary – S-32).

6) **Glacier, seaward end**

IHO Definition: Projecting seaward extension of glacier, usually afloat. Also called glacier tongue. (IHO Dictionary – S-32).

7) **Mangrove**

IHO Definition: One of several genera of tropical trees or shrubs which produce many prop roots and grow along low lying coasts into shallow water. (IHO Dictionary – S-32).

8) **Marshy shore**

IHO Definition: A shoreline area made up of spongy land saturated with water. It may have a shallow covering of water, usually with a considerable amount of vegetation appearing above the surface. (Adapted from IHO Dictionary – S-32).

9) **Coral reef**

IHO Definition: A reef, often of large extent, composed chiefly of coral and its derivatives. (IHO Dictionary – S-32).

10) **Ice coast**

IHO Definition: A vertical cliff forming the seaward edge of an ice shelf, ranging in height between 2 metres to 50 metres or more above sea level. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.21, November 2000).

11) **Shelly shore**

IHO Definition: A shoreline area made up of shells, i.e. made up of the hard outside covering of marine animals. (Adapted from IHO Dictionary – S-32).

22.15 Category of control point (CATCTR)

Category of control point: IHO Definition:

1) **Triangulation point**

IHO Definition: A recoverable point on the earth, whose geographic position has been determined by angular methods with geodetic instruments. A triangulation point is a selected point, which has been marked with a station mark, or it is a conspicuous natural or artificial object. Also called trigonometric station or triangulation station. (IHO Dictionary – S-32).

2) **Observation spot**

IHO Definition: A point used by surveyors for determining precise position by astronomical means. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.22, November 2000).

3) **Fixed point**

IHO Definition: A point whose position has been accurately determined and plotted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.22, November 2000).

4) **Benchmark**

IHO Definition: A permanent, stable object containing a marked point of known elevation with respect to a datum

used as a reference level for tidal observations or as a control point for leveling. (IHO Dictionary – S-32).

5) **Boundary Mark**

IHO Definition: A marker identifying the location of a surveyed boundary line. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **Horizontal control, main station**

IHO Definition: A station in a network of permanently marked control points having their geographic positions established to form third order accuracy or better. (Canadian Hydrographic Service, Survey Standing Order, 3.1-85).

7) **Horizontal control, secondary station**

IHO Definition: A station in a network of control points of a localized nature utilized for shoreline plots, sounding marks, stadia work, etc., whose geographic position may be established to a slightly lower order than main control points. (Canadian Hydrographic Service, Survey Standing Order, 3.1-85).

22.16 Category of conveyor (CATCON)

Category of conveyor: IHO Definition:

1) **Aerial cableway (telepheric)**

IHO Definition: A transportation system consisting of load cables strung between pylons on which carrier units (for example: cars or buckets intended to transport people, material, and/or equipment) are suspended. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **Belt conveyor**

IHO Definition: A conveyor along which material or people are transported by means of a moving belt. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.23, November 2000).

3) **Flume**

IHO Definition: An artificial channel, usually an inclined chute or trough, for carrying water to furnish power, transport logs down a mountainside, etc. (Websters New World Dictionary Third College Edition).

Comment [j226]: S-57
Extension 06/01.

22.17 Category of crane (CATCRN)

Category of crane: IHO Definition:

2) **Container crane/gantry**

IHO Definition: A high speed, shore-based crane used in the lift-on/lift-off operation of specially constructed containers. (Adapted from Nautical Chart Manual, US Department of Commerce, Coast and Geodetic Survey, 7th Edition).

3) **Sheerlegs**

IHO Definition: A tripodal structure used in dockyards and harbours for stepping masts or lifting loads in to and out of vessels. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.25, November 2000).

4) **Travelling crane**

IHO Definition: A crane mounted on rails (track) that can move (usually parallel to the wharf face) in order to load and unload cargo vessels. (Canadian Hydrographic Service).

5) **A-frame**

IHO Definition: A type of crane shaped like the letter "A". They are often positioned on river banks or the coastline and are used for lifting logs from logging trucks and depositing them in the water. (Canadian Hydrographic

Service).

22.18 Category of dam (CATDAM)

Category of dam: IHO Definition:

1) **Weir**

IHO Definition: A dam erected across a river to raise the level of the water. A fence of stakes set in a river or along the shore as a trap for fish. The word is now restricted to smaller works, the larger are called dams. (IHO Dictionary – S-32).

2) **Dam**

IHO Definition: A barrier to check or confine anything in motion; particularly one constructed to hold back water and raise its level to form a reservoir, or to prevent flooding. (IHO Dictionary – S-32).

3) **Flood barrage**

IHO Definition: An opening dam across a channel which, when required, is closed to control flood waters. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.26, November 2000).

22.19 Category of distance mark (CATDIS)

Category of distance mark: IHO Definition:

1) **Distance mark not physically installed**

IHO Definition: A point at which a distance from an origin along a feature is given for information, but at which no specific marker exists. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.27, November 2000).

2) **Visible mark, pole**

IHO Definition: A point at which a distance from an origin along a feature is given for information and which is marked by a pole. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.27, November 2000).

3) **Visible mark, board**

IHO Definition: A point at which a distance from an origin along a feature is given for information and which is marked by a board. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.27, November 2000).

4) **Visible mark, unknown shape**

IHO Definition: A point at which a distance from an origin along a feature is given for information and which is physically marked, but the shape of the mark is not known or not given. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.27, November 2000).

22.20 Category of dock (CATDOC)

Category of dock: IHO Definition:

1) **Tidal**

IHO Definition: A dock which is open to the sea and in which the water level is affected by tides. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.28, November 2000).

2) **Non-tidal (wet dock)**

IHO Definition: A dock in which water can be maintained at any level by closing a gate when the water is at the desired level. (IHO Dictionary – S-32).

22.21 Category of dumping ground (CATDPG)

Category of dumping ground: IHO Definition:

2) **Chemical waste dumping ground**

IHO Definition: An area at sea where chemical waste is dumped. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.29, November 2000).

3) **Nuclear waste dumping ground**

IHO Definition: An area at sea where nuclear waste is dumped. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.29, November 2000).

4) **Explosives dumping ground**

IHO Definition: An area at sea where explosives are dumped. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.29, November 2000).

5) **Spoil ground**

IHO Definition: A sea area where dredged material is deposited. Also called dumping ground. (IHO Dictionary – S-32).

6) **Vessel dumping ground**

IHO Definition: An area at sea where disused vessels are scuttled. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.29, November 2000).

22.22 Category of fence/wall (CATFNC)

Category of fence/wall: IHO Definition:

1) **Fence**

IHO Definition: A man-made barrier of relatively light structure used as an enclosure or boundary. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Hedge**

IHO Definition: A continuous growth of shrubbery planted as a fence, a boundary or a wind break. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **Wall**

IHO Definition: A solid man-made barrier of generally heavy material used as an enclosure, boundary, or for protection. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

22.23 Category of ferry (CATFRY)

Category of ferry: IHO Definition:

1) **“Free moving” ferry**

IHO Definition: A ferry which may have routes that vary with weather, tide and traffic. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.32, November 2000).

2) **Cable ferry**

IHO Definition: A ferry that follows a fixed route guided by a cable. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.32, November 2000).

3) **Ice ferry**

IHO Definition: A winter-time ferry which crosses a lead. (Finnish Maritime Administration).

Remarks:

- The attribute “category of ferry” does not encode the various types of ferry vessel, but the **manoeuvrability** of the ferry. The value “cable ferry” indicates a ferry that follows a fixed route guided by a cable. A cable ferry may hinder the flow of other traffic.

22.24 Category of fishing facility (CATFIF)

Category of fishing facility: IHO Definition:

1) **Fishing stake**

IHO Definition: A pole or stake placed in shallow water to outline a fishing ground or to catch fish. (IHO Dictionary – S-32).

2) **Fish trap**

IHO Definition: A structure (usually portable) for catching fish. (Adapted from IHO Dictionary – S-32).

3) **Fish weir**

IHO Definition: A fence of stakes or stones set in a river or along the shore to trap fish. (Adapted from IHO Dictionary – S-32).

4) **Tunny net**

IHO Definition: A net built at sea for catching tunny. (IHO Dictionary – S-32).

22.25 Category of fog signal (CATSIG)

Category of fog signal: IHO Definition:

1) **Explosive**

IHO Definition: A signal produced by the firing of explosive charges. (Admiralty List of Lights and Fog Signals).

2) **Diaphone**

IHO Definition: A diaphone uses compressed air and generally emits a powerful low-pitched sound, which often concludes with a brief sound of suddenly lowered pitch, termed the “grunt”. (Admiralty List of Lights and Fog Signals).

3) **Siren**

IHO Definition: A siren uses compressed air and exists in a variety of types which differ considerably in their sound and power. (Admiralty List of Lights and Fog Signals).

4) **Nautophone**

IHO Definition: A horn having a diaphragm oscillated by electricity (IHO Dictionary – S-32).

5) **Reed**

IHO Definition: A reed uses compressed air and emits a weak, high pitched sound. (Admiralty List of Lights and Fog Signals).

6) **Tyfon**

IHO Definition: A diaphragm horn which operates under the influence of compressed air or steam (IHO Dictionary – S-32).

7) **Bell**

IHO Definition: A ringing sound with a short range. The apparatus may be operated automatically, by hand or by

wave action. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.34, November 2000).

8) **Whistle**

IHO Definition: A distinctive sound made by a jet of air passing through an orifice. The apparatus may be operated automatically, by hand or by air being forced up a tube by waves acting on a buoy. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.34, November 2000).

9) **Gong**

IHO Definition: A sound produced by vibration of a disc when struck. The apparatus may be operated automatically, by hand or by wave action. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.34, November 2000).

10) **Horn**

IHO Definition: A horn uses compressed air or electricity to vibrate a diaphragm and exists in a variety of types which differ greatly in their sound and power. (Admiralty List of Lights and Fog Signals).

Remarks:

- The attribute “category of fog signal” encodes the various means of generating the signal. The classification “horn” is the generic term for fog signals “nautophone”, “reed” and “tyfon”.

22.26 Category of fortified structure (CATFOR)

Category of fortified structure: IHO Definition:

1) **Castle**

IHO Definition: A large fortified building or structure. (Adapted from The Collins Dictionary).

2) **Fort**

IHO Definition: A fortified enclosure, building, or position able to be defended against an enemy. (The Collins Dictionary).

3) **Battery**

IHO Definition: A fortified structure on which artillery is mounted. (The Collins Dictionary).

4) **Blockhouse**

IHO Definition: A concrete structure strengthened to give protection against enemy fire, with apertures to allow defensive gunfire. (The Collins Dictionary).

5) **Fortified tower**

IHO Definition: A small circular fort with very thick walls (e.g. Martello tower). (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Comment [j227]: MD8 – 7.Co.1

6) **Redoubt**

IHO Definition: An outwork or fieldwork usually square or polygonal and without flanking defences. (Concise Oxford Dictionary).

8) **Fortified submarine shelter**

IHO Definition: Not currently defined.

22.27 Category of gate (CATGAT)

Category of gate: IHO Definition:

2) **Flood barrage gate**

IHO Definition: An opening gate used to control flood water. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Caisson**

IHO Definition: A steel structure used for closing the entrance of locks, wet and dry docks. (IHO Dictionary – S-32).

4) **Lock gate**

IHO Definition: The massive hinged doors at each end of a lock. (Adapted from IHO Dictionary – S-32).

5) **Dyke gate**

IHO Definition: An opening gate in a dyke. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **Sluice**

IHO Definition: A sliding gate or other contrivance for changing the level of a body of water by controlling the flow into or out of it. (IHO Dictionary – S-32).

22.28 Category of harbour facility (CATHAF)

Category of harbour facility: IHO Definition:

1) **RoRo terminal**

IHO Definition: A terminal for roll-on roll-off ferries. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.38, November 2000).

3) **Ferry terminal**

IHO Definition: A terminal for passenger and vehicle ferries. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.38, November 2000).

4) **Fishing harbour**

IHO Definition: A harbour with facilities for fishing boats. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.38, November 2000).

5) **Yacht harbour/marina**

IHO Definition: A harbour facility for small boats, yachts, etc., where supplies, repairs, and various services are available. (IHO Dictionary – S-32).

6) **Naval base**

IHO Definition: A centre of operations for naval vessels. (Adapted from The Collins Dictionary).

7) **Tanker terminal**

IHO Definition: A terminal for the bulk handling of liquid cargoes. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.38, November 2000).

8) **Passenger terminal**

IHO Definition: A terminal for the loading and unloading of passengers. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.38, November 2000).

9) **Shipyards**

IHO Definition: A place where ships are built or repaired (IHO Dictionary – S-32).

10) **Container terminal**

IHO Definition: A terminal with facilities to load/unload or store shipping containers. (S-57, Appendix A – Chapter

Comment [j228]: MD8 – 7.Cl.5 and 7.Co.17.

2, Edition 3.1, Page 2.38, November 2000, as amended).

11) **Bulk terminal**

IHO Definition: A terminal for the handling of bulk materials such as iron ore, coal, etc. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.38, November 2000).

12) **Syncrolift**

IHO Definition: A platform powered by synchronous electric motors used to lift vessels (larger than boats) in and out of the water. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.38, November 2000).

13) **Straddle carrier**

IHO Definition: A wheeled vehicle designed to lift and carry containers or vessels within its own framework. It is used for moving, and sometimes stacking, shipping containers and vessels. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.39, November 2000).

14) **Service harbour**

IHO Definition: A harbour within which the floating equipment (dredges, tugs ...) of harbour services are stationed.

Comment [j229]: S-57
Extension 06/01.

22.29 Category of hulk (CATHLK)

Category of hulk: IHO Definition:

1) **Floating restaurant**

IHO Definition: A permanently moored floating structure (for example: an old ship) that is used as a restaurant. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **Historic ship**

IHO Definition: A ship of historical interest permanently moored as a tourist attraction. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Floating museum**

IHO Definition: A permanently moored floating structure (for example: an old ship) that is used as a museum. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **Floating accommodation**

IHO Definition: A permanently moored floating structure (for example: an old ship) that is used for accommodation. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **Floating breakwater**

IHO Definition: A permanently moored floating structure, often constructed from old ships, used as a breakwater. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.40, November 2000).

22.30 Category of ice (CATICE)

Category of ice: IHO Definition:

1) **Fast Ice**

IHO Definition: Sea ice which remains fast, generally in the position where originally formed, and which may attain a considerable thickness. It is found along coasts, where it is attached to the shore, or over shoals, where it may be held in position by islands, grounded icebergs or grounded polar ice. (IHO Dictionary – S-32).

5) **Glacier**

IHO Definition: A mass of snow and ice continuously moving from higher to lower ground or, if afloat,

continuously spreading. (IHO Dictionary – S-32).

8) **Polar ice**

IHO Definition: Sea ice that is more than one year old (in contrast to winter ice). The WMO code defines polar ice as any sea ice more than one year old and more than 3 metres thick. (IHO Dictionary – S-32).

22.31 Category of installation buoy (CATINB)

Category of installation buoy: IHO Definition:

1) **Catenary anchor leg mooring (CALM)**

IHO Definition: Incorporates a large buoy which remains on the surface at all times and is moored by 4 or more anchors. Mooring hawsers and cargo hoses lead from a turntable on top of the buoy, so that the buoy does not turn as the ship swings to wind and stream.

2) **Single buoy mooring (SBM)**

IHO Definition: A mooring structure used by tankers to load and unload in port approaches or in offshore oil and gas fields. The size of the structure can vary between a large mooring buoy and a manned floating structure. Also known as single point mooring (SPM) (IHO Dictionary – S-32).

22.32 Category of land region (CATLND)

Category of land region: IHO Definition:

1) **Fen**

IHO Definition: A type of bog, especially a low-lying area, wholly or partly covered with water and dominated by grasslike plants, grasses, sedges and reeds. (The New Encyclopaedia Britannica, 15th Edition 1991).

2) **Marsh**

IHO Definition: An area of wet, often spongy ground that is subject to frequent flooding or tidal inundations, but not considered to be continually under water. It is characterized by the growth of non woody plants and by the lack of trees. (Nautical Chart Manual, US National Oceanic and Atmospheric Administration - NOAA, 1992).

3) **Moor/bog**

IHO Definition: Wet spongy ground consisting of decaying vegetation, which retains stagnant water, too soft to bear the weight of any heavy body. (IHO Dictionary – S-32).

4) **Heathland**

IHO Definition: A tract of wasteland; peat bog, usually covered by a low scrubby growth, but may have scattered small open water holes. (Nautical Chart Manual, US National Oceanic and Atmospheric Administration - NOAA, 1992).

5) **Mountain range**

IHO Definition: A series of connected and aligned mountains or mountain ridges. (US National Oceanic and Atmospheric Administration - NOAA, 1992).

6) **Lowlands**

IHO Definition: Low and relatively level land at a lower elevation than adjoining areas. (US National Oceanic and Atmospheric Administration - NOAA, 1992).

7) **Canyon lands**

IHO Definition: A relatively narrow, deep depression with steep sides, the bottom of which generally has a continuous slope. (IHO Dictionary – S-32).

8) **Paddy field**

IHO Definition: A piece of land set aside for crops which are periodically flooded (e.g. rice paddy). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.44, November 2000).

9) **Agricultural land**

IHO Definition: Of or pertaining to the science or practice of cultivating the soil and rearing animals. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

10) **Savanna/grassland**

IHO Definition: An open grassy plain with few or no trees in a tropical or subtropical region; a tract covered mainly by grasses that have little or no woody tissue. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

11) **Parkland**

IHO Definition: A piece of ground kept for ornament and/or recreation or maintained in its natural state as a public property or area. (Websters New Collegiate Dictionary 1975).

12) **Swamp**

IHO Definition: An area of spongy land saturated with water. It may have a shallow covering of water, usually with a considerable amount of vegetation appearing above the surface. (IHO Dictionary – S-32).

13) **Landslide**

IHO Definition: (or landslip). The sliding down of a mass of land on a mountain or cliff-side; land which has so fallen. (IHO Dictionary – S-32).

14) **Lava flow**

IHO Definition: The substance that results from the cooling of molten rock. (Adapted from IHO Dictionary – S-32).

15) **Salt pan**

IHO Definition: Shallow pools of brackish water used for the natural evaporation of sea water to obtain salt. (IHO Dictionary – S-32).

16) **Moraine**

IHO Definition: Any accumulation of loose material deposited by a glacier. (Marine Chart Manual, US National Oceanic and Atmospheric Administration - NOAA, 1992).

17) **Crater**

IHO Definition: Bowl-shaped cavity, at the summit or on the side of a volcano. (IHO Dictionary – S-32). Also a hole formed by the impact of a meteor. (Nautical Chart Manual, US National Oceanic and Atmospheric Administration - NOAA, 1992).

18) **Cave**

IHO Definition: A natural underground chamber or series of chambers open to the surface. (Merriam-Webster On-line Dictionary, March 2010).

19) **Rock column or pinnacle**

IHO Definition: Any high tower or spire-shaped pillar of rock, alone or cresting a summit. (IHO Dictionary – S-32).

20) **Cay**

IHO Definition: A small insular feature usually with scant vegetation; usually of sand or coral. Often applied to smaller coral shoals. (United Kingdom Hydrographic Office – UKHO – The Mariners Handbook).

Remarks:

- The attribute “category of land region” encodes general terms for describing landscapes.

22.33 Category of landmark (CATLMK)

Category of landmark: IHO Definition:

1) **Cairn**

IHO Definition: A mound of stones, usually conical or pyramidal, raised as a landmark or to designate a point of importance in surveying. (IHO Dictionary – S-32).

2) **Cemetery**

IHO Definition: A site and associated structures devoted to the burial of the dead. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Chimney**

IHO Definition: A vertical structure containing a passage or flue for discharging smoke and gases of combustion. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **Dish aerial**

IHO Definition: A parabolic aerial for the receipt and transmission of high frequency radio signals. (IHO Dictionary – S-32).

5) **Flagstaff (flagpole)**

IHO Definition: A staff or pole on which a flag is raised. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **Flare stack**

IHO Definition: A tall structure used for burning-off waste oil or gas. (IHO Dictionary – S-32). Normally showing a flame and located at refineries. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.45, November 2000).

7) **Mast**

IHO Definition: A relatively tall structure usually held vertical by guy lines. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.45, November 2000).

8) **Windsock**

IHO Definition: A tapered fabric sleeve mounted so as to catch and swing with the wind, thus indicating the wind direction. (Navigation Dictionary, US National Oceanic and Atmospheric Administration - NOAA, 1969).

9) **Monument**

IHO Definition: A marker erected and/or maintained as a memorial to a person and/or event. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

10) **Column (pillar)**

IHO Definition: A cylindrical or slightly tapering body of considerably greater length than diameter erected vertically. (Oxford English Dictionary).

11) **Memorial plaque**

IHO Definition: A slab of metal, usually ornamented, erected as a memorial to a person or event. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.46, November 2000).

12) **Obelisk**

IHO Definition: A tapering shaft usually of stone or concrete, square or rectangular in section, with a pyramidal apex. (Adapted from Oxford English Dictionary).

13) **Statue**

IHO Definition: A representation of a living being, sculptured, moulded, or cast in a variety of materials (for example: marble, metal, or plaster). (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

14) **Cross**

IHO Definition: A monument, or other structure in form of a cross. (Funk & Wagnalls Dictionary).

15) **Dome**

IHO Definition: A landmark comprising a hemispherical or spheroidal shaped structure. (Adapted from the Macquarie Dictionary).

16) **Radar scanner**

IHO Definition: A device used for directing a radar beam through a search pattern. (Adapted from Navigation Dictionary, US National Oceanic and Atmospheric Administration - NOAA, 1969).

17) **Tower**

IHO Definition: A relatively tall, narrow structure that may either stand alone or may form part of another structure. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

18) **Windmill**

IHO Definition: A system of vanes attached to a tower and driven by wind (excluding wind turbines). (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

19) **Windmotor**

IHO Definition: A tower and associated equipment that generates electrical power from wind. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

20) **Spire/minaret**

IHO Definition: A tall conical or pyramid-shaped structure often built on the roof or tower of a building, especially a church or mosque. (Adapted from The New Shorter Oxford English Dictionary, 1993).

21) **Large rock or boulder on land**

IHO Definition: An isolated rocky formation or a single large stone (Adapted from IHO Dictionary – S-32).

22.34 Category of lateral mark (CATLAM)

Category of lateral mark: IHO Definition:

1) **Port-hand lateral mark**

IHO Definition: Indicates the port boundary of a navigational channel or suggested route when proceeding in the "conventional direction of buoyage". (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.47, November 2000).

2) **Starboard-hand lateral mark**

IHO Definition: Indicates the starboard boundary of a navigational channel or suggested route when proceeding in the "conventional direction of buoyage". (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.47, November 2000).

3) **Preferred channel to starboard lateral mark**

IHO Definition: At a point where a channel divides, when proceeding in the "conventional direction of buoyage", the preferred channel (or primary route) is indicated by a modified port-hand lateral mark. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.47, November 2000).

4) **Preferred channel to port lateral mark**

IHO Definition: At a point where a channel divides, when proceeding in the "conventional direction of buoyage", the preferred channel (or primary route) is indicated by a modified starboard-hand lateral mark. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.47, November 2000).

Remarks:

- There are two international buoyage regions, A and B, between which lateral marks differ. The buoyage region is encoded using the separate attribute MARSYS (see clause X.X). When top-marks, retro reflectors and/or lights are fitted to these marks, they are encoded as separate features.
- The “conventional direction of buoyage” may be either the general direction taken by the mariner when approaching a harbour, river, estuary or other waterway from seaward, or the direction determined by the proper authority, which in principle follows a clockwise direction around land masses.

22.35 Category of light (CATLIT)

Category of light: IHO Definition:

1) Directional function

IHO Definition: A light illuminating a sector of very narrow angle and intended to mark a direction to follow. (IHO Dictionary – S-32).

4) Leading light

IHO Definition: A light associated with other lights so as to form a leading line to be followed. (Adapted from IHO Dictionary – S-32).

5) Aero light

IHO Definition: An aero light is established for aeronautical navigation and may be of higher power than marine lights and visible from well offshore. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.48, November 2000).

6) Air obstruction light

IHO Definition: A light marking an obstacle which constitutes a danger to air navigation. (IHO Dictionary – S-32, Edition 5; 2767).

7) Fog detector light

IHO Definition: A light used to automatically determine conditions of visibility which warrant the turning on or off of a sound signal. (IHO Dictionary – S-32).

8) Flood light

IHO Definition: A broad beam light used to illuminate a structure or area. (Adapted from The Collins Dictionary).

9) Strip light

IHO Definition: A light whose source has a linear form generally horizontal, which can reach a length of several metres. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.48, November 2000).

10) Subsidiary light

IHO Definition: A light placed on or near the support of a main light and having a special use in navigation. (Admiralty List of Radio Signals, UK Hydrographic Office).

11) Spotlight

IHO Definition: A powerful light focused so as to illuminate a small area. (The Collins Dictionary).

12) Front

IHO Definition: Term used with leading lights to describe the position of the light on the lead as viewed from seaward. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.49, November 2000).

13) Rear

IHO Definition: Term used with leading lights to describe the position of the light on the lead as viewed from seaward. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.49, November 2000).

14) Lower

IHO Definition: Term used with leading lights to describe the position of the light on the lead as viewed from

seaward. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.49, November 2000).

15) **Upper**

IHO Definition: Term used with leading lights to describe the position of the light on the lead as viewed from seaward. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.49, November 2000).

16) **Moiré effect**

IHO Definition: A short range (up to 2km) type of directional light. Sodium lighting gives a yellow background to a screen on which a vertical black line will be seen by an observer on the centre line. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.49, November 2000).

17) **Emergency**

IHO Definition: A light available as a backup to a main light which will be illuminated should the main light fail. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.49, November 2000).

18) **Bearing light**

IHO Definition: A light which enables its approximate bearing to be obtained without the use of a compass. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.49, November 2000).

19) **Horizontally disposed**

IHO Definition: A group of lights of identical character and almost identical position, that are disposed horizontally. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.49, November 2000).

20) **Vertically disposed**

IHO Definition: A group of lights of identical character and almost identical position, that are disposed vertically. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.49, November 2000).

Remarks:

- Marine light (a light intended primarily for marine navigation) is not included in the above list. All lights are considered to be marine lights unless the attribute “category of light” indicates otherwise.

22.36 Category of marine farm/culture (CATMFA)

Category of marine farm/culture: **IHO Definition:**

1) **Crustaceans**

IHO Definition: Hard shelled animals, for example crabs or lobsters. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.50, November 2000).

2) **Edible bivalve molluscs**

IHO Definition: Oysters, mussels, scallops ... (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.50, November 2000, as amended).

3) **Fish**

IHO Definition: Vertebrate cold blooded animal with gills, living in water. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.50, November 2000).

4) **Seaweed**

IHO Definition: The general name for marine plants of the Algae class which grow in long narrow ribbons. (International Maritime Dictionary, 2nd Ed.).

5) **Pearl culture farm**

IHO Definition: An area where pearls are artificially cultivated. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.50, November 2000).

Comment [j230]: MD8 – 5.Co.2.

22.37 Category of military practice area (CATMPA)

Category of military practice area: IHO Definition:

2) **Torpedo exercise area**

IHO Definition: An area within which exercises are carried out with torpedoes. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.52, November 2000).

3) **Submarine exercise area**

IHO Definition: An area within which submarine exercises are carried out. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.52, November 2000).

4) **Firing danger area**

IHO Definition: Areas for bombing and missile exercises. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.52, November 2000).

5) **Mine-laying practice area**

IHO Definition: An area within which mine laying exercises are carried out. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.52, November 2000).

6) **Small arms firing range**

IHO Definition: An area for shooting pistols, rifles and machine guns etc. at a target. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.52, November 2000).

22.38 Category of mooring/warping facility (CATMOR)

Category of mooring/warping facility: IHO Definition:

1) **Dolphin**

IHO Definition: A post or group of posts, which may support a deck, used for mooring or warping a vessel. (Adapted from IHO Dictionary – S-32).

2) **Deviation dolphin**

IHO Definition: A post or group of posts, which a vessel may swing around for compass adjustment. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Bollard**

IHO Definition: Small shaped post, mounted on a wharf or dolphin used to secure ship's lines. (IHO Dictionary – S-32).

4) **Tie-up wall**

IHO Definition: A section of wall designated for tying-up vessels awaiting transit. Bollards and mooring devices are available for both large and small ships. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **Post or pile**

IHO Definition: A long heavy timber or section of steel, wood, concrete, etc., forced into the seabed to serve as a mooring facility. (Adapted from IHO Dictionary – S-32).

6) **Chain/wire/cable**

IHO Definition: A chain or very strong fibre or wire rope connecting two independent objects (e.g. a buoy and pile or two buoys) used to anchor or moor vessels or buoys. (Adapted from IHO Dictionary – S-32).

7) **Mooring buoy**

IHO Definition: A buoy secured to the bottom by permanent moorings with means for mooring a vessel by use of

its anchor chain or mooring lines. (IHO Dictionary – S-32).

22.39 Category of navigation line (CATNAV)

Category of hulk: IHO Definition:

1) **Clearing line**

IHO Definition: A straight line that marks the boundary between a safe and a dangerous area or that passes clear of a navigational danger. (Adapted from IHO Dictionary, S-32).

2) **Transit line**

IHO Definition: A line passing through one or more fixed marks. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.55, November 2000).

3) **Leading line bearing a recommended track**

IHO Definition: A line passing through one or more clearly defined objects, along the path of which a vessel can approach safely up to a certain distance off. (Adapted from IHO Dictionary, S-32).

22.40 Category of obstruction (CATOBS)

Category of obstruction: IHO Definition:

1) **Snag/stump**

IHO Definition: A tree, branch or broken pile embedded in the ocean floor, river or lake bottom and not visible on the surface, forming thereby a hazard to vessels. (IHO Dictionary – S-32).

2) **Wellhead**

IHO Definition: A submarine structure projecting some distance above the seabed and capping a temporarily abandoned or suspended oil or gas well. (IHO Dictionary – S-32).

3) **Diffuser**

IHO Definition: A structure on an outfall through which liquids are discharged. The structure will usually project above the level of the outfall and can be an obstruction to navigation. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.56, November 2000).

4) **Crib**

IHO Definition: A permanent structure set in the water, framed with wooden beams and filled with rocks or boulders. They are used to anchor log booms or support other constructions, e.g. submerged outfalls, diffusers etc. They may always be dry, submerged or cover and uncover. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.56, November 2000).

5) **Fish haven**

IHO Definition: Areas established by private interests, usually sport fishermen, to simulate natural reefs and wrecks that attract fish. The reefs are constructed by dumping assorted junk in areas which may be of very small extent or may stretch a considerable distance along a depth contour. Also called fishery reefs. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.56, November 2000).

6) **Foul area**

IHO Definition: An area of numerous unidentified dangers to navigation. The area serves as a warning to the mariner that all dangers are not identified individually and that navigation through the area may be hazardous. Commonly used to encode areas behind danger lines on navigation charts. (Adapted from IHO Dictionary – S-32).

7) **Foul ground**

IHO Definition: Areas over which it is safe to navigate but which should be avoided for anchoring, taking the ground or ground fishing. (IHO Dictionary – S-32).

8) **Ice boom**

IHO Definition: Floating barriers, anchored to the bottom, used to deflect the path of floating ice in order to prevent the obstruction of locks, intakes, etc., and to prevent damage to bridge piers and other structures. (Canadian Hydrographic Service, Chart specifications).

9) **Ground tackle**

IHO Definition: Equipment such as anchors, concrete blocks, chains and cables, etc., used to position floating structures such as trot and mooring buoys etc. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.57, November 2000).

10) **Boom**

IHO Definition: A floating barrier used to protect a river or harbour mouth or to create a sheltered area for storage purposes. (IHO Dictionary – S-32).

22.41 Category of offshore platform (CATOFFP)

Category of offshore platform: IHO Definition:

1) **Oil derrick/rig**

IHO Definition: A temporary mobile structure, either fixed or floating, used in the exploration stages of oil and gas fields. (IHO Dictionary – S-32).

2) **Production platform**

IHO Definition: A term used to indicate a permanent offshore structure equipped to control the flow of oil or gas. It does not include entirely submarine structures. (Adapted from IHO Dictionary – S-32).

3) **Observation/research platform**

IHO Definition: A platform from which one's surroundings or events can be observed, noted or recorded such as for scientific study. (Adapted from IHO Dictionary – S-32, Edition 5).

4) **Articulated loading platform (ALP)**

IHO Definition: A metal lattice tower, buoyant at one end and attached at the other by a universal joint to a concrete filled base on the seabed. The platform may be fitted with a helicopter platform, emergency accommodation and hawser/hose retrieval. (Adapted from United Kingdom Hydrographic Office CSDO 607.2 (12), May 1994).

5) **Single anchor leg mooring (SALM)**

IHO Definition: A rigid frame or tube with a buoyancy device at its upper end, secured at its lower end to a universal joint on a large steel or concrete base resting on the seabed, and at its upper end to a mooring buoy by a chain or wire. (Adapted from United Kingdom Hydrographic Office CSDO 607.2 (12), May 1994).

6) **Mooring tower**

IHO Definition: A platform secured to the seabed and surmounted by a turntable to which ships moor. (Adapted from United Kingdom Hydrographic Office CSDO 607.2 (12), May 1994).

7) **Artificial island**

IHO Definition: A man-made structure usually built for the exploration or exploitation of marine resources, marine scientific research, tidal observations, etc. (Adapted from IHO Dictionary – S-32).

8) **Floating production, storage and off-loading vessel (FPSO)**

IHO Definition: An offshore facility consisting of a moored tanker/barge by which the product is extracted, stored or exported. (Adapted from United Kingdom Hydrographic Office CSDO 607.2 (13), May 1994).

Comment [j231]: MD8 – 7.Cl.6 and 7.Co.18.

9) **Accommodation platform**

IHO Definition: A platform used primarily for eating, sleeping and recreation purposes. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.59, November 2000).

10) **Navigation, communication and control buoy (NCCB)**

IHO Definition: A floating structure with control room, power and storage facilities, attached to the seabed by a flexible pipeline and cables. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.59, November 2000).

22.42 Category of oil barrier (CATOLB)

Category of oil barrier: **IHO Definition:**

1) **Oil retention (high pressure pipe)**

IHO Definition: A pipe with holes from which air blows. When the air bubbles reach the surface they form a barrier which prevents the spread of oil. (Kort- og Matrikelstyrelsen, Denmark).

2) **Floating oil barrier**

IHO Definition: A floating tube shaped structure, with a curtain (2 metre) hanging under it, below the surface, which prevents the spread of oil. (Kort- og Matrikelstyrelsen, Denmark).

22.43 Category of pile (CATPLE)

Category of pile: **IHO Definition:**

1) **Stake**

IHO Definition: An elongated wood or metal pole embedded in the seabed to serve as a marker or support. (Adapted from IHO Dictionary – S-32).

3) **Post**

IHO Definition: A vertical piece of timber, metal or concrete forced into the earth or seabed. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **Tripodal**

IHO Definition: A single structure comprising 3 or more piles held together (sections of heavy timber, steel or concrete), and forced into the earth or seabed. (Adapted from IHO Dictionary – S-32).

5) **Piling**

IHO Definition: A number of piles, usually in a straight line, and usually connected or bolted together (Adapted from IHO Dictionary – S-32).

6) **Row of piles**

IHO Definition: A number of piles, usually in a straight line, but not connected by structural members (Australian Hydrographic Service).

Comment [j232]: S-57 – Extension 06/01.

22.44 Category of pilot boarding place (CATPIL)

Category of pilot boarding place: **IHO Definition:**

1) **Boarding by pilot-cruising vessel**

IHO Definition: Pilot boards from a cruising vessel. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.62, November 2000).

2) **Boarding by helicopter**

IHO Definition: Pilot boards by helicopter which comes out from the shore. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.62, November 2000).

3) **Pilot comes out from shore**

IHO Definition: Pilot boards from a vessel which comes out from the shore on request. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.62, November 2000).

22.45 Category of pipeline/pipe (CATPIP)

Category of pipeline/pipe: IHO Definition:

2) **Outfall pipe**

IHO Definition: A pipe (generally a sewer or drainage pipe) discharging in to the sea or a river. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Intake pipe**

IHO Definition: A pipe taking water from a river or other body of water, to drive a mill or supply a canal, waterworks, etc. (Adapted from IHO Dictionary – S-32).

4) **Sewer**

IHO Definition: A pipe in a sewage system for carrying water or sewage to a disposal area. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **Bubbler system**

IHO Definition: A submerged pipe from which warm water bubbles, preventing the surrounding water from freezing. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.63, November 2000).

6) **Supply pipe**

IHO Definition: A pipe used for transport (supply) of gas or liquid product. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

22.46 Category of production area (CATPRA)

Category of production area: IHO Definition:

1) **Quarry**

IHO Definition: An open-air excavation for the extraction of stone intended principally for use in construction. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **Mine**

IHO Definition: An excavation made in the terrain for the purpose of extracting and/or exploiting natural resources. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Stockpile**

IHO Definition: A reserve stock of material, equipment or other supplies. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.64, November 2000).

4) **Power station area**

IHO Definition: A facility including one or more buildings and equipment used for power generation. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **Refinery area**

IHO Definition: A facility where petroleum and/or petroleum products are refined. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **Timber yard**

IHO Definition: An open tract for the storage of wooden lumber and timbers. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

7) **Factory area**

IHO Definition: A group of buildings where goods are manufactured. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.64, November 2000).

8) **Tank farm**

IHO Definition: A tract of land occupied by large-capacity tanks in which petroleum, natural gas, or liquid petrochemicals are stored. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

9) **Wind farm**

IHO Definition: A collection of wind motors that are collocated and are organized as a single power generation unit. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

10) **Slag heap/spoil heap**

IHO Definition: Hill of refuse from a mine, industrial plant etc. on land. (Adapted from Concise Oxford Dictionary).

22.47 Category of pylon (CATPYL)

Category of pylon: IHO Definition:

1) **Power transmission pylon/pole**

IHO Definition: A pylon that supports one or more power lines. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **Telephone/telegraph pylon/pole**

IHO Definition: A pylon that supports one or more communication lines. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **Aerial cableway/sky pylon**

IHO Definition: A tower or pylon supporting steel cables which convey cars, buckets, or other suspended carrier units. (Adapted from Defence Geospatial Information Working Group; Feature and Attribute Coding Catalogue, Edition 1.2).

4) **Bridge pylon/tower**

IHO Definition: A tower and/or pylon from which the deck of a bridge is suspended. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **Bridge pier**

IHO Definition: A pillar or abutment that supports a bridge span. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

22.48 Category of radar station (CATRAS)

Category of radar station: IHO Definition:

1) **Radar surveillance station**

IHO Definition: A radar station established for traffic surveillance. (IHO Dictionary – S-32)

2) Coast radar station

IHO Definition: A shore-based station which the mariner can contact by radio to obtain a position. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.68, November 2000).

22.49 Category of radar transponder beacon (CATRTB)**Category of radar transponder beacon: IHO Definition:****1) Remark, radar beacon transmitting continuously**

IHO Definition: A radar marker beacon which continuously transmits a signal appearing as a radial line on a radar screen, the line indicating the direction of the beacon. Remarks are intended primarily for marine use. The name "remark" is derived from the words radar marker. (IHO Dictionary – S-32).

2) Racon, radar transponder beacon

IHO Definition: A radar beacon which returns a coded signal which provides identification of the beacon, as well as range and bearing. The range and bearing are indicated by the location of the first character received on the radar screen. The name "racon" is derived from the words radar beacon. (IHO Dictionary – S-32).

3) Leading racon/radar transponder beacon

IHO Definition: A radar beacon that may be used (in conjunction with at least one other radar beacon) to indicate a leading line. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.69, November 2000).

22.50 Category of radio station (CATROS)**Category of radio station: IHO Definition:**

A radiobeacon is a radio transmitter which emits a distinctive or characteristic signal on which a bearing may be taken. (Adapted from IHO Dictionary, S-32).

1) Circular (non-directional) marine or aero-marine radiobeacon

IHO Definition: A radio station which need not necessarily be manned, the emissions of which, radiated around the horizon, enable its bearing to be determined by means of the radio direction finder of a ship. (IHO Dictionary – S-32).

2) Directional radiobeacon

IHO Definition: A special type of radiobeacon station the emissions of which are intended to provide a definite track for guidance. (IHO Dictionary – S-32).

3) Rotating-pattern radiobeacon

IHO Definition: A special type of radiobeacon station emitting a beam of waves to which a uniform turning movement is given, the bearing of the station being determined by means of an ordinary listening receiver and a stop watch. Also referred to as a rotating loop radiobeacon. (IHO Dictionary – S-32).

4) Consol beacon

IHO Definition: A type of long range position fixing beacon. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.70, November 2000).

5) Radio direction-finding station

IHO Definition: A radio station intended to determine only the direction of other stations by means of transmission from the latter. (IHO Dictionary – S-32).

6) Coast radio station providing QTG service

IHO Definition: A radio station which is prepared to provide QTG service, that is to say, to transmit upon request

from a ship, a radio signal, the bearing of which can be taken by that ship. (IHO Dictionary – S-32).

7) **Aeronautical radiobeacon**

IHO Definition: A radio beacon designed for aeronautical use. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.71, November 2000).

8) **Decca**

IHO Definition: The Decca Navigator System is a high accuracy, short to medium range radio navigational aid intended for coastal and landfall navigation. (Admiralty List of Radio Signals, UK Hydrographic Office, Volume 2, 1994).

9) **Loran C**

IHO Definition: A low frequency electronic position fixing system using pulsed transmissions at 100 Khz. (Admiralty List of Radio Signals, UK Hydrographic Office, Volume 2, 1994).

10) **Differential GPS**

IHO Definition: A radiobeacon transmitting DGPS correction signals. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.71, November 2000).

11) **Toran**

IHO Definition: An electronic position fixing system used mainly by aircraft. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.71, November 2000).

12) **Omega**

IHO Definition: A long-range radio navigational aid which operates within the VLF frequency band. The system comprises eight land based stations. (Admiralty List of Radio Signals, UK Hydrographic Office, Volume 2, 1994).

13) **Syledis**

IHO Definition: A ranging position fixing system operating at 420-450MHz over a range of up to 400Km. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.71, November 2000).

14) **Chaika (Chayka)**

IHO Definition: A low frequency electronic position fixing system using pulsed transmissions at 100 Khz. (Admiralty List of Radio Signals, UK Hydrographic Office, Volume 2, 1995).

15) **Radio telephone station**

IHO Definition: The equipment needed at one station to carry on two way voice communication by radio waves only. (Websters New World Dictionary Third College Edition).

Comment [j233]: S-57 Extension 06/01.

22.51 Category of recommended track (CATTRK)

Category of recommended track: IHO Definition:

1) **Based on a system of fixed marks**

IHO Definition: A straight route (known as a recommended track, range or leading line), which comprises:

- a. at least two structures (usually beacons or daymarks) and/or natural features, which may carry lights and/or top-marks. The structures/features are positioned so that when observed to be in line, a vessel can follow a known bearing with safety. (adapted from International Association of Lighthouse Authorities - IALA Aids to Navigation Guide, 1990); or
- b. a single structure or natural feature, which may carry lights and/or a topmark, and a specified bearing which can be followed with safety. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.72, November 2000, as amended).

Comment [j234]: MD8 – 2.Co.5 and 2.Cl.6

2) **Not based on a system of fixed marks**

IHO Definition: A route (known as a recommended track or preferred route) which is not based on a single or

series of structures or features in line. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.72, November 2000).

22.52 Category of rescue station (CATRSC)

Category of rescue station: IHO Definition:

1) Rescue station with lifeboat

IHO Definition: A place where equipment for saving life at sea is maintained; the type of lifeboat may vary from fast, long distance boats to inflatable inshore boats. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.74, November 2000).

2) Rescue station with rocket

IHO Definition: Rocket - a pyrotechnic projectile used for signalling or for life-saving purposes. (IHO Dictionary – S-32).

4) Refuge for shipwrecked mariners

IHO Definition: Shelter or protection from danger or distress at sea. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.74, November 2000).

5) Refuge for intertidal area walkers

IHO Definition: Shelter or protection from danger in areas exposed to extreme and sudden tides or tidal streams. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.74, November 2000).

6) Lifeboat lying at a mooring

IHO Definition: A place where a lifeboat is moored ready for use. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.74, November 2000).

7) Aid radio station

IHO Definition: A radio station reserved for emergency situations, might also be a public telephone. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.74, November 2000).

8) First aid equipment

IHO Definition: A place where first aid equipment is available. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.74, November 2000).

22.53 Category of restricted area (CATREA)

Category of restricted area: IHO Definition:

1) Offshore safety zone

IHO Definition: The area around an offshore installation within which vessels are prohibited from entering without permission. Special regulations protect installations within a safety zone and vessels of all nationalities are required to respect the zone. (IHO Dictionary – S-32, Edition 5).

4) Nature reserve

IHO Definition: A tract of land or water managed so as to preserve its flora, fauna, physical features, etc. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.75, November 2000, as amended).

5) Bird sanctuary

IHO Definition: A place where birds are bred and protected. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.75, November 2000).

6) Game reserve

IHO Definition: A place where wild animals or birds hunted for sport or food are kept undisturbed for private use.

Comment [j235]: MD8 – 2.Co.3 and 2.Cl.5

(S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.75, November 2000).

7) **Seal sanctuary**

IHO Definition: A place where seals are protected. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.75, November 2000).

8) **Degaussing range**

IHO Definition: An area, usually about two cables diameter, within which ships' magnetic fields may be measured; sensing instruments and cables are installed on the seabed in the range and there are cables leading from the range to a control position ashore. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

9) **Military area**

IHO Definition: An area controlled by the military in which restrictions may apply. (Hydrographic Service, Royal Australian Navy).

10) **Historic wreck area**

IHO Definition: An area around certain wrecks of historical importance to protect the wrecks from unauthorized interference by diving, salvage or deposition (including anchoring). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

12) **Navigational aid safety zone**

IHO Definition: An area around a navigational aid which vessels are prohibited from entering. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

14) **Minefield**

IHO Definition: An area laid and maintained with explosive mines for defence or practice purposes. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

18) **Swimming area**

IHO Definition: An area in which people may swim and therefore vessel movement may be restricted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

19) **Waiting area**

IHO Definition: An area reserved for vessels waiting to enter a harbour. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

20) **Research area**

IHO Definition: An area where marine research takes place. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

21) **Dredging area**

IHO Definition: An area where dredging is taking place. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

22) **Fish sanctuary**

IHO Definition: A place where fish [including shellfish and crustaceans] are protected. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000, as amended).

Comment [j236]: MD8 – 5.Co.4.

23) **Ecological reserve**

IHO Definition: A tract of land [or water] managed so as to preserve the relation of plants and living creatures to each other and to their surroundings. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000, as amended).

Comment [j237]: MD8 – 2.Co.3 and 2.Cl.5

24) **No wake area**

IHO Definition: An area in which a vessels' speed must be reduced in order to reduce the size of the wake it

produces. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

25) **Swinging area**

IHO Definition: An area where vessels turn. (Service Hydrographique et Océanographique de la Marine, France).

26) **Water skiing area**

IHO Definition: An area within which people may water ski and therefore vessel movement may be restricted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.76, November 2000).

27) **Environmentally sensitive sea area**

IHO Definition: A generic term which may be used to describe a wide range of areas, considered sensitive for a variety of environmental reasons. (IHO Chart Specifications, S-4).

28) **Particularly sensitive sea area**

IHO Definition: An area that needs special protection through action by IMO because of its significance for regional ecological, socio-economic or scientific reasons and because it may be vulnerable to damage by international shipping activities. (IHO Chart Specifications, S-4).

29) **Disengagement area**

IHO Definition: An area near a fairway where vessels can go to clear the way or make an about turn and possibly return to a waiting area when the nautical conditions impose it.

Remarks:

- The official legal status of each kind of restricted area defines the kind of restriction(s), e.g. the restriction for a “game preserve” may be “entering prohibited”, the restriction for an “anchoring prohibition area” is “anchoring prohibited”.

22.54 Category of road (CATROD)

Category of road: **IHO Definition:**

1) **Motorway**

IHO Definition: A limited access dual carriageway road specially designed for fast long-distance traffic and subject to special regulations concerning its use. It may have more than two lanes. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **Major road**

IHO Definition: A hard surfaced (metalled) road; a main through route. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.77, November 2000).

3) **Minor road**

IHO Definition: A secondary road for local traffic. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.77, November 2000).

4) **Track/path**

IHO Definition: Track - a rough path or way formed by use. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Path - a way or track laid down for walking or made by continual treading. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **Major street**

IHO Definition: A main road, in an urban area, for through traffic. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.77, November 2000).

6) **Minor street**

IHO Definition: A secondary road, in an urban area, for local traffic. (S-57, Appendix A – Chapter 2, Edition 3.1,

Page 2.77, November 2000).

22.55 Category of runway (CATRUN)

Category of runway: IHO Definition:

1) **Aeroplane runway**

IHO Definition: A defined rectangular area, on a land aerodrome, prepared for the landing and take-off run of aircraft along its length. (IHO Dictionary – S-32).

2) **Helicopter landing pad**

IHO Definition: A site on which helicopters may land and take off. (IHO Dictionary – S-32).

22.56 Category of sea area (CATSEA)

Category of sea area: IHO Definition:

2) **Gat**

IHO Definition: A natural or artificial passage or channel through shoals or steep banks, or across a line of banks lying between two channels. (IHO Dictionary – S-32).

3) **Bank**

IHO Definition: An elevation over which the depth of water is relatively shallow, but normally sufficient for safe surface navigation. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

4) **Deep**

IHO Definition: In oceanography, an obsolete term which was generally restricted to depths greater than 6,000 m. (IHO Dictionary – S-32).

5) **Bay**

IHO Definition: Wide indentation in the coastline generally smaller than a gulf and larger than a cove. (IHO Dictionary – S-32).

6) **Trench**

IHO Definition: A long narrow, characteristically very deep and asymmetrical depression of the sea floor, with relatively steep sides. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

7) **Basin**

IHO Definition: A depression, characteristically in the deep sea floor, more or less equidimensional in plan and of variable extent. (adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

8) **Mud flats**

IHO Definition: A level tract of land, as the bed of a dry lake or an area frequently uncovered at low tide. Usually in plural. (IHO Dictionary – S-32).

9) **Reef**

IHO Definition: Rock lying at or near the sea surface that may constitute a hazard to surface navigation. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

10) **Ledge**

IHO Definition: A rocky formation continuous with and fringing the shore. (IHO Dictionary – S-32).

11) Canyon

IHO Definition: A relatively narrow, deep depression with steep sides, the bottom of which generally has a continuous slope, developed characteristically on some continental slopes. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

12) Narrows

IHO Definition: A navigable narrow part of a bay, strait, river, etc. (IHO Dictionary – S-32).

13) Shoal

IHO Definition: An offshore hazard to surface navigation that is composed of unconsolidated material. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

14) Knoll

IHO Definition: A relatively small isolated elevation of a rounded shape. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

15) Ridge

IHO Definition: (a) A long, narrow elevation with steep sides. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

(b) A long, narrow elevation often separating ocean basins. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

(c) The linked major mid-oceanic mountain systems of global extent. Also called mid-oceanic ridge. (adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

16) Seamount

IHO Definition: A large isolated elevation, greater than 1000m in relief above the sea floor, characteristically of conical form. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

17) Pinnacle

IHO Definition: Any high tower or spire-shaped pillar or rock or coral, alone or cresting a summit. It may extend above the surface of the water. It may or may not be a hazard to surface navigation. (IHO Dictionary – S-32).

18) Abyssal plain

IHO Definition: An extensive, flat, gently sloping or nearly level region at abyssal depths. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

19) Plateau

IHO Definition: A flat or nearly flat area of considerable extent, dropping off abruptly on one or more sides. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

20) Spur

IHO Definition: A subordinate elevation, ridge or rise projecting outward from a larger feature. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

21) Shelf

IHO Definition: A zone adjacent to a continent (or around an island) and extending from the low water line to a depth at which there is usually a marked increase of slope towards oceanic depths. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

22) Trough

IHO Definition: A long depression of the sea floor characteristically flat bottomed and steep sided and normally shallower than a trench. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

23) Saddle

IHO Definition: A broad pass, resembling in shape a riding saddle, in a ridge or between contiguous seamounts.

(IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

24) **Abyssal hills**

IHO Definition: A tract, on occasion extensive, of low (100-500m) elevations on the deep sea floor. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

25) **Apron**

IHO Definition: A gently dipping featureless surface, underlain primarily by sediment, at the base of any steeper slope. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

26) **Archipelagic apron**

IHO Definition: A gentle slope with a generally smooth surface on the sea floor, characteristically found around groups of islands or seamounts. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

27) **Borderland**

IHO Definition: A region adjacent to a continent, normally occupied by or bordering a shelf, that is highly irregular with depths well in excess of those typical of a shelf. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

28) **Continental margin**

IHO Definition: The zone, generally consisting of shelf, slope and rise, separating the continent from the abyssal plain or deep sea floor. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

29) **Continental rise**

IHO Definition: A gentle slope rising from the oceanic depths towards the foot of a continental slope. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

30) **Escarpment**

IHO Definition: An elongated and comparatively steep slope separating or gently sloping areas. Also called: scarp. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

31) **Fan**

IHO Definition: A relatively smooth, fan-like, depositional feature normally sloping away from the outer termination of a canyon or canyon system. Also called: cone. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

32) **Fracture zone**

IHO Definition: An extensive linear zone of irregular topography of the sea floor, characterized by steep-sided or asymmetrical ridges, troughs or escarpments. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

33) **Gap**

IHO Definition: A narrow break in a ridge or a rise. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

34) **Guyot**

IHO Definition: A seamount having a comparatively smooth flat top. Also called tablemount. (IHO Dictionary – S-32 and IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

35) **Hill**

IHO Definition: A small isolated elevation (see also abyssal hills). (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

36) **Hole**

IHO Definition: A local depression, often steep sided, of the sea floor. (Adapted from IHO-IOC Publication B-6,

Standardization of Undersea Feature Names, 2nd Edition).

37) **Levee**

IHO Definition: A depositional embankment bordering a canyon, valley or deep-sea channel. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

38) **Median valley**

IHO Definition: The axial depression of the mid-oceanic ridge system. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

39) **Moat**

IHO Definition: An annular depression that may not be continuous, located at the base of many seamounts, islands and other isolated elevations. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

40) **Mountains**

IHO Definition: A large and complex grouping of ridges and seamounts. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

41) **Peak**

IHO Definition: A prominent elevation either pointed or of a very limited extent across the summit. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

42) **Province**

IHO Definition: A region identifiable by a group of similar physiographic features whose characteristics are markedly in contrast with surrounding areas. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

43) **Rise**

IHO Definition: (a) A broad elevation that rises gently and generally smoothly from the sea floor.

(b) The linked major mid-oceanic mountain systems of global extent. Also called mid-oceanic ridge. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

44) **Sea channel**

IHO Definition: A continuously sloping, elongated narrow depression commonly found in fans or abyssal plains and customarily bordered by levees on one or both sides. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

45) **Seamount chain**

IHO Definition: Several seamounts in linear or arcuate alignment. Also called: seamounts. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

46) **Shelf-edge**

IHO Definition: A narrow zone at the seaward margin of a shelf along which is a marked increase of slope. Also called: shelf break. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

47) **Sill**

IHO Definition: A sea floor barrier of relatively shallow depth restricting water movement between basins. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

48) **Slope**

IHO Definition: The slope seaward from the shelf edge to the upper edge of a continental rise or the point where there is a general reduction in slope. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

49) Terrace

IHO Definition: A relatively flat horizontal or gently inclined surface, sometimes long and narrow, which is bounded by a steeper ascending slope on one side and by a steeper descending slope on the opposite side. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

50) Valley

IHO Definition: A relatively shallow, wide depression, the bottom of which usually has a continuous gradient. This term is generally not used for features that have canyon-like characteristics for a significant portion of their extent. Also called: submarine valley; sea valley. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2nd Edition).

51) Canal

IHO Definition: An artificial water course. (IHO Dictionary – S-32).

52) Lake

IHO Definition: A large body of water entirely surrounded by land. (IHO Dictionary – S-32).

53) River

IHO Definition: A relatively large natural stream of water. (IHO Dictionary – S-32).

54) Reach

IHO Definition: A straight section of a river, especially a navigable river between two bends or an arm of the sea extending into the land. (Adapted from IHO Dictionary – S-32).

22.57 Category of shoreline construction (CATSLC)

Category of shoreline construction: IHO Definition:

1) Breakwater

IHO Definition: A structure protecting a shore area, harbour, anchorage, or basin from waves. (IHO Dictionary – S-32).

2) Groyne (groin)

IHO Definition: A low artificial wall-like structure of durable material extending from the land to seaward for a particular purpose, such as to prevent coast erosion. (Adapted from IHO Dictionary – S-32 and IHO Chart Specifications, S-4).

3) Mole

IHO Definition: A form of breakwater alongside which vessels may lie on the sheltered side only; in some cases it may lie entirely within an artificial harbour, permitting vessels to lie along both sides. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.84, November 2000).

4) Pier (jetty)

IHO Definition: A long, narrow structure extending into the water to afford a berthing place for vessels, to serve as a promenade, etc. (IHO Dictionary – S-32).

5) Promenade pier

IHO Definition: A pier built only for recreational purposes. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.84, November 2000).

6) Wharf (quay)

IHO Definition: A structure serving as a berthing place for vessels. (IHO Dictionary – S-32).

7) Training wall

IHO Definition: A wall or bank, often submerged, built to direct or confine the flow of a river or tidal current, or to

promote a scour action. (Adapted from IHO Dictionary – S-32 and IHO Chart Specifications, S-4).

8) **Rip rap**

IHO Definition: A layer of broken rock, cobbles, boulders, or fragments of sufficient size to resist the erosive forces of flowing water and wave action. (Adapted from Marine Chart Manual, US National Oceanic and Atmospheric Administration - NOAA, 1992).

9) **Revetment**

IHO Definition: Facing of stone or other material, either permanent or temporary, placed along the edge of a stream, river or canal to stabilize the bank and to protect it from the erosive action of the stream. (Adapted from IHO Dictionary – S-32).

10) **Sea wall**

IHO Definition: An embankment or wall for protection against waves or tidal action along a shore or water front. (IHO Dictionary – S-32).

11) **Landing steps**

IHO Definition: Steps at the shoreline as the connection between land and water on different levels. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

12) **Ramp**

IHO Definition: A sloping structure that can either be used, as a landing place, at variable water levels, for small vessels, landing ships, or a ferry boat, or for hauling a cradle carrying a vessel, which may include rails. (Adapted from IHO Dictionary – S-32).

13) **Slipway**

IHO Definition: The prepared and usually reinforced inclined surface on which keel- and bilge-blocks are laid for supporting a vessel under construction. (IHO Dictionary – S-32).

14) **Fender**

IHO Definition: A protective structure designed to cushion the impact of a vessel and prevent damage. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

15) **Solid face wharf**

IHO Definition: A wharf consisting of a solid wall of concrete, masonry, wood etc., such that the water cannot circulate freely under the wharf. The type of construction affects ship-handling; for example, a solid face wharf may give shelter from tidal streams, but under certain circumstances a cushion of water may build up between such a wharf and a ship attempting to berth at it, causing difficulties in ship handling. (Capt. A. Rae, pilot, Port of Halifax & Mr. R. Morash, wharf building engineer, Transport Canada).

16) **Open face wharf**

IHO Definition: A wharf supported on piles or other structures which allow free circulation of water under the wharf. (Capt. A. Rae, pilot, Port of Halifax & Mr. R. Morash, wharf building engineer, Transport Canada).

17) **Log ramp**

IHO Definition: An inclined plane used to dump logs into the water for transport, or to haul logs out of the water for processing. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

18) **Swimming facility**

IHO Definition: An artificial pool or swimming enclosure, especially one in the open air, which may be constructed of wire mesh or heavy netting supported by cables, buoys or piles, for swimming in. (Adapted from the Macquarie Concise Dictionary).

Remarks:

- The attribute "category of shoreline construction" encodes the usage of a shoreline construction.

Comment [j238]: Extension 6/01.

22.58 Category of signal station, traffic (CATSIT)**Category of signal station, traffic: IHO Definition:****1) Port control**

IHO Definition: A signal station for the control of vessels within a port. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

2) Port entry and departure

IHO Definition: A signal station for the control of vessels entering or leaving a port. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

3) International port traffic

IHO Definition: A signal station displaying International Port Traffic signals. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

4) Berthing

IHO Definition: A signal station for the control of vessels when berthing. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

5) Dock

IHO Definition: A signal station for the control of vessels entering or leaving a dock. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

6) Lock

IHO Definition: A signal station for the control of vessels entering or leaving a lock. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

7) Flood barrage

IHO Definition: A signal station for the control of vessels wishing to pass through a flood control barrage. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

8) Bridge passage

IHO Definition: A signal station for the control of vessels wishing to pass under a bridge. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

9) Dredging

IHO Definition: A signal station indicating when dredging is in progress. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

10) Traffic control light

IHO Definition: Visual signal lights placed in a waterway to indicate to shipping the movements authorised at the time at which they are shown. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.86, November 2000).

22.59 Category of signal station, warning (CATSIW)**Category of signal station, warning: IHO Definition:****1) Danger**

IHO Definition: A signal or message warning of the presence of a danger to navigation. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.87, November 2000).

2) Maritime obstruction

IHO Definition: A signal or message warning of the presence of a maritime obstruction. (S-57, Appendix A –

Chapter 2, Edition 3.1, Page 2.87, November 2000).

3) **Cable**

IHO Definition: A signal or message warning of the presence of a cable. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.87, November 2000).

4) **Military practice**

IHO Definition: A signal or message warning of activity in a military practice area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.87, November 2000).

5) **Distress**

IHO Definition: A station that may receive or transmit distress signals. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.87, November 2000).

6) **Weather**

IHO Definition: A visual signal displayed to indicate a weather forecast. (IHO Dictionary – S-32).

7) **Storm**

IHO Definition: A signal or message conveying information about storm conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.87, November 2000).

8) **Ice**

IHO Definition: A signal or message conveying information about ice conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.87, November 2000).

9) **Time**

IHO Definition: An accurate signal marking a specified time or time interval. It is used primarily for determining errors of timepieces. Such signals are usually sent from an observatory by radio or telegraph, but visual signals are used at some ports. (IHO Dictionary – S-32).

10) **Tide**

IHO Definition: A signal or message conveying information on tidal conditions in the area in question. (IHO Dictionary – S-32).

11) **Tide stream**

IHO Definition: A signal or message conveying information on condition of tidal currents in the area in question. (IHO Dictionary – S-32).

12) **Tide gauge**

IHO Definition: A device for measuring the height of tide. A graduated staff in a sheltered area where visual observations can be made; or it may consist of an elaborate recording instrument making a continuous graphic record of tide height against time. Such an instrument is usually actuated by a float in a pipe communicating with the sea through a small hole which filters out shorter waves. (IHO Dictionary – S-32).

13) **Tide scale**

IHO Definition: A visual scale which directly shows the height of the water above chart datum or a local datum. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.88, November 2000).

14) **Diving**

IHO Definition: A signal or message warning of diving activity. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.88, November 2000).

15) **Water level gauge**

IHO Definition: A device for measuring and conveying information about the water level (non-tidal) in the area in question. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.88, November 2000).

22.60 Category of silo/tank (CATSIL)

Category of silo/tank: IHO Definition:

1) Silo in general

IHO Definition: A large storage structure used for storing loose materials. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) Tank in general

IHO Definition: A fixed structure for storing liquids. (IHO Dictionary – S-32).

3) Grain elevator

IHO Definition: A storage building for grain. Usually a tall frame, metal or concrete structure with an especially compartmented interior. (The New Encyclopaedia Britannica Micropaedia, 15th Edition).

4) Water tower

IHO Definition: A tower supporting an elevated storage tank of water. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

22.61 Category of slope (CATSLO)

Category of slope: IHO Definition:

1) Cutting

IHO Definition: An excavation through high ground for a road, canal, etc. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.90, November 2000).

2) Embankment

IHO Definition: A man-made raised long mound of earth or other material. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) Dune

IHO Definition: A mound, ridge or hill of drifted material on the sea coast or in a desert. (Adapted from IHO Dictionary – S-32).

4) Hill

IHO Definition: A small isolated elevation, smaller than a mountain. (IHO Dictionary – S-32).

6) Cliff

IHO Definition: Land rising abruptly for a considerable distance above the water or surrounding land. (IHO Dictionary – S-32).

7) Scree

IHO Definition: A mass of detritus, forming a precipitous, strong slope upon a mountain-side. Also the material composing such a slope. (IHO Dictionary – S-32).

Comment [j239]: MD8 – 7.Co.22

22.62 Category of small craft facility (CATSCF)

Category of small craft facility: IHO Definition:

1) Visitor's berth

IHO Definition: A berth set aside for the use of visiting vessels. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.91, November 2000).

2) **Nautical club**

IHO Definition: A club for mariners generally associated with other small craft facilities. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.91, November 2000).

3) **Boat hoist**

IHO Definition: A hoist for lifting boats out of the water [also known as a travel lift] (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.91, November 2000).

Comment [j240]: MD8 – 3.Cl.5 and 3.Co.4.

4) **Sailmaker**

IHO Definition: A place where sails are made or may be taken for repair. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.91, November 2000).

5) **Boatyard**

IHO Definition: A place on shore where boats may be built, stored and repaired. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

6) **Public inn**

IHO Definition: A public house providing food, drink and accommodation. (The Collins Reference English Dictionary, 1992).

7) **Restaurant**

IHO Definition: A commercial establishment serving food. (The Collins Reference Dictionary, 1992).

8) **Chandler**

IHO Definition: A dealer in ships' supplies. (The Collins Reference Dictionary, 1992).

9) **Provisions**

IHO Definition: A place where food and other such supplies are available. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

10) **Doctor**

IHO Definition: A place where a doctor is available to provide medical attention. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

11) **Pharmacy**

IHO Definition: A place where medical drugs are dispensed. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

12) **Water tap**

IHO Definition: A place where fresh water is available. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

13) **Fuel station**

IHO Definition: A place where fuel is available. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

14) **Electricity**

IHO Definition: A place where a connection to an electrical supply is available. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

15) **Bottle gas**

IHO Definition: A place where bottled gas is available. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

16) **Showers**

IHO Definition: A place where showers are available. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92,

November 2000).

17) **Launderette**

IHO Definition: A place where there are facilities for washing clothes. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

18) **Public toilets**

IHO Definition: A place where toilets are available for public use. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

19) **Post box**

IHO Definition: A place where mail may be posted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

20) **Public telephone**

IHO Definition: A place where a telephone is available for public use. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

21) **Refuse bin**

IHO Definition: A place where refuse may be dumped. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

22) **Car park**

IHO Definition: A place where cars may be parked. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

23) **Parking for boats and trailers**

IHO Definition: A place on shore where boats and/or trailers may be parked. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

24) **Caravan site**

IHO Definition: A place where caravans may be parked or where caravan accommodation is provided. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

25) **Camping site**

IHO Definition: A place where visitors may pitch tents and camp. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

26) **Sewerage pump-out station**

IHO Definition: A place where sewerage may be pumped off a vessel. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

27) **Emergency telephone**

IHO Definition: A place where a telephone is available for emergency use only. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

28) **Landing/launching place for boats**

IHO Definition: A place where boats may be landed or launched. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

29) **Visitors mooring**

IHO Definition: A mooring set aside for the use of visiting vessels. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

30) **Scrubbing berth**

IHO Definition: A place where vessels may berth for the purpose of careening. (S-57, Appendix A – Chapter 2,

Edition 3.1, Page 2.92, November 2000).

31) **Picnic area**

IHO Definition: A place where people may go to eat a picnic. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

32) **Mechanics workshop**

IHO Definition: A place where mechanical repairs can be undertaken to engines or other vessel equipment. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

33) **Guard and/or security service**

IHO Definition: A place where a vessel is patrolled by a security service or stored in a secure lockup. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.92, November 2000).

22.63 Category of special purpose mark (CATSPM)

Category of special purpose mark: IHO Definition:

1) **Firing danger mark**

IHO Definition: A mark used to indicate a firing danger area, usually at sea. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

2) **Target mark**

IHO Definition: Any object toward which something is directed, the distinctive marking or instrumentation of a ground point to aid its identification on a photograph. (Adapted from IHO Dictionary – S-32).

3) **Marker ship mark**

IHO Definition: A mark marking the position of a ship which is used as a target during some military exercise. (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

4) **Degaussing range mark**

IHO Definition: A mark used to indicate a degaussing range. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

5) **Barge mark**

IHO Definition: A mark of relevance to barges. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

6) **Cable mark**

IHO Definition: A mark used to indicate the position of submarine cables or the point at which they run on to the land. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

7) **Spoil ground mark**

IHO Definition: A mark used to indicate the limit of a spoil ground. (Adapted from IHO Dictionary – S-32).

8) **Outfall mark**

IHO Definition: A mark used to indicate the position of an outfall or the point at which it leaves the land. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

9) **ODAS**

IHO Definition: Ocean Data Acquisition System. (IHO Dictionary – S-32).

10) **Recording mark**

IHO Definition: A mark used to record data for scientific purposes. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

11) Seaplane anchorage mark

IHO Definition: A mark used to indicate a seaplane anchorage. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

12) Recreation zone mark

IHO Definition: A mark used to indicate a recreation zone. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

14) Mooring mark

IHO Definition: A mark indicating a mooring or moorings. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

15) LANBY (Large Automatic navigational Buoy)

IHO Definition: A large buoy designed to take the place of a lightship where construction of an offshore light station is not feasible. (IHO Dictionary – S-32).

16) Leading mark

IHO Definition: Aids to navigation or other indicators so located as to indicate the path to be followed. Leading marks identify a leading line when they are in transit. (IHO Dictionary – S-32).

17) Measured distance mark

IHO Definition: A mark forming part of a transit indicating one end of a measured distance. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

18) Notice mark

IHO Definition: A notice board or sign indicating information to the mariner. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

19) TSS Mark

IHO Definition: A mark indicating a Traffic Separation Scheme. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.94, November 2000).

20) Anchoring prohibited mark

IHO Definition: A mark indicating an anchoring prohibited area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

21) Berthing prohibited mark

IHO Definition: A mark indicating that berthing is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

22) Overtaking prohibited mark

IHO Definition: A mark indicating that overtaking is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

23) Two-way traffic prohibited mark

IHO Definition: A mark indicating a one-way route. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

24) “Reduced wake” mark

IHO Definition: A mark indicating that vessels must not generate excessive wake. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

25) Speed limit mark

IHO Definition: A mark indicating that a speed limit applies. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

26) Stop mark

IHO Definition: A mark indicating the place where the bow of a ship must stop when traffic lights show red. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

27) General warning mark

IHO Definition: A mark indicating that special caution must be exercised in the vicinity of the mark. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

28) “Sound ship’s siren” mark

IHO Definition: A mark indicating that a ship should sound its siren or horn. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

29) Restricted vertical clearance mark

IHO Definition: A mark indicating the minimum vertical space available for passage. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

30) Maximum vessel’s draught mark

IHO Definition: A mark indicating the maximum draught of vessel permitted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

31) Restricted horizontal clearance mark

IHO Definition: A mark indicating the minimum horizontal space available for passage. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

32) Strong current warning mark

IHO Definition: A mark warning of strong currents. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

33) Berthing permitted mark

IHO Definition: A mark indicating that berthing is allowed. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

34) Overhead power cable mark

IHO Definition: A mark indicating an overhead power cable. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

35) “Channel edge gradient” mark

IHO Definition: A mark indicating the gradient of the slope of a dredge channel edge. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

36) Telephone mark

IHO Definition: A mark indicating the presence of a telephone. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

37) Ferry crossing mark

IHO Definition: A mark indicating that a ferry route crosses the ship route; often used with a “sound ship’s siren” mark. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

39) Pipeline mark

IHO Definition: A mark used to indicate the position of submarine pipelines or the point at which they run on to the land. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

40) Anchorage mark

IHO Definition: A mark indicating an anchorage area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

41) Clearing mark

IHO Definition: A mark used to indicate a clearing line. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

42) Control mark

IHO Definition: A mark indicating the location at which a restriction or requirement exists. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

43) Diving mark

IHO Definition: A mark indicating that diving may take place in the vicinity. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

44) Refuge beacon

IHO Definition: A mark providing or indicating a place of safety. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.95, November 2000).

45) Foul ground mark

IHO Definition: A mark indicating a foul ground. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

46) Yachting mark

IHO Definition: A mark installed for use by yachtsmen. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

47) Heliport mark

IHO Definition: A mark indicating an area where helicopters may land. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

48) GPS mark

IHO Definition: A mark indicating a location at which a GPS position has been accurately determined.

49) Seaplane landing mark

IHO Definition: A mark indicating an area where seaplanes land. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

50) Entry prohibited mark

IHO Definition: A mark indicating that entry is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

51) Work in progress mark

IHO Definition: A mark indicating that work (generally construction) is in progress. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

52) Mark with unknown purpose

IHO Definition: A mark whose detailed characteristics are unknown. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

53) Wellhead mark

IHO Definition: A mark indicating a borehole that produces or is capable of producing oil or natural gas. (Adapted from IHO Dictionary – S-32).

54) Channel separation mark

IHO Definition: A mark indicating the point at which a channel divides separately into two channels. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

55) Marine farm mark

IHO Definition: A mark indicating the existence of a fish, mussel, oyster or pearl farm/ culture. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

56) **Artificial reef mark**

IHO Definition: A mark indicating the existence or the extent of an artificial reef. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.96, November 2000).

57) **Ice mark**

IHO Definition: A mark, used year round, that may be submerged when ice passes through the area [

Comment [j241]: S-57
Extension 06/01.

Remarks:

- A mark may be a beacon, a buoy, a signpost or may take another form.

22.64 Category of tidal stream (CAT_TS)

Category of tidal stream: IHO Definition:

1) **Flood stream**

IHO Definition: The horizontal movement of water associated with the rising tide. Flood streams generally set towards the shore, or in the direction of the tide progression. Also called flood, flood current or ingoing stream. (Adapted from IHO Dictionary – S-32).

2) **Ebb stream**

IHO Definition: The horizontal movement of water associated with falling tide. Ebb streams generally set seaward, or in the opposite direction to the tide progression. Also called ebb, ebb current or outgoing stream. (IHO Dictionary – S-32).

3) **Other tidal flow**

IHO Definition: Any other horizontal movement of water associated with tides, e.g. rotary flow. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.97, November 2000).

22.65 Category of Traffic Separation Scheme (CATTSS)

Category of traffic separation scheme: IHO Definition:

1) **IMO - adopted**

IHO Definition: A defined Traffic Separation Scheme that has been adopted as an IMO routing measure. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.99, November 2000).

2) **Not IMO - adopted**

IHO Definition: A defined Traffic Separation Scheme that has not been adopted as an IMO routing measure. S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.99, November 2000).

22.66 Category of vegetation (CATVEG)

Category of land vegetation: IHO Definition:

1) **Grass**

IHO Definition: Vegetation belonging to a group of plants with green blades that are eaten by cattle, sheep, etc. (The Concise Oxford Dictionary).

3) **Bush**

IHO Definition: A shrub or clump of shrubs with stems of moderate length. (The Concise Oxford Dictionary).

4) **Deciduous wood**

IHO Definition: A wood with trees that shed their leaves annually. (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

5) **Coniferous wood**

IHO Definition: A wood with evergreen trees of a group usually bearing cones, including yews, cedars and redwoods. (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

6) **Wood in general (inc mixed wood)**

IHO Definition: Growing trees densely occupying a tract of land. (The Concise Oxford Dictionary).

7) **Mangroves**

IHO Definition: One of several genera of tropical trees or shrubs which produce many prop roots and grow along low lying coasts into shallow water. (IHO Dictionary – S-32).

10) **Mixed crops**

IHO Definition: A mixture of arable crops.

11) **Reed**

IHO Definition: Any of various water or marsh plants with a firm stem. (The Concise Oxford Dictionary).

12) **Moss**

IHO Definition: any small cryptogamous plant of the class Musci, growing in dense clusters on the surface of the ground in bogs, on trees, stones, etc. (The Concise Oxford Dictionary).

13) **Tree in general**

IHO Definition: An individual woody perennial plant, typically having a single stem or trunk growing to a considerable height and bearing lateral branches at some distance from the ground. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

14) **Evergreen tree**

IHO Definition: Having green foliage all the year round. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

15) **Coniferous tree**

IHO Definition: A cone-bearing, needle-leaved or scale-leaved evergreen tree. (Adapted from The New Encyclopedia Britannica, 15th Edition 1991).

16) **Palm tree**

IHO Definition: A tropical or sub-tropical tree, shrub or vine having a tall, unbranched, columnar trunk. The trunk is crowned by a tuft or large, pleated fan or feather shaped leaves with stout sheathing and often prickly petioles (stalks), the persistent bases of which frequently clothe the trunk. (Adapted from The New Encyclopedia Britannica, 15th Edition 1991).

17) **Nipa palm tree**

IHO Definition: (Also called Nypa palm). A rare palm tree with regular branching involving equal or sub-equal division of the apex that results in forking. (Adapted from The New Encyclopedia Britannica, 15th Edition 1991).

18) **Casuarina tree**

IHO Definition: (Also called beefwood, Australian pine, ironwood, she-oak, swamp oak, whistling pine). A tree characterized by slender, green, often drooping branches that are deeply grooved and that bear, at intervals, whorls of tine leaves. (Adapted from The New Encyclopedia Britannica, 15th Edition 1991).

19) **Eucalypt tree**

IHO Definition: An instance of a large genus of mostly very large trees (90 metres). (Adapted from The New

Encyclopaedia Britannica, 15th Edition 1991).

20) **Deciduous tree**

IHO Definition: Sheds its leaves each year at the end of the period of growth. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

21) **Mangrove tree**

IHO Definition: One of several genera of tropical trees or shrubs which produce many prop roots and grow along low lying coasts in to shallow waters. (IHO Dictionary – S-32).

22) **Filao tree**

IHO Definition: Casuarina equisetifolia, the most widespread and well-known member of the family Casuarinaceae. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

22.67 Category of water turbulence (CATWAT)

Category of water turbulence: IHO Definition:

1) **Breaker**

IHO Definition: A wave breaking on the shore, over a reef, etc. Breakers may be roughly classified into three kinds, although the categories may overlap: spilling breakers break gradually over a considerable distance; plunging breakers tend to curl over and break with a crash; and surging breakers peak up, but then instead of spilling or plunging they surge up on the beach face. The French word “brisant” is also used for the obstacle causing the breaking of the wave. (IHO Dictionary – S-32).

2) **Eddies**

IHO Definition: Circular movements of water usually formed where currents pass obstructions, between two adjacent currents flowing counter to each other, or along the edge of a permanent current. (IHO Dictionary – S-32).

3) **Overfalls**

IHO Definition: Short, breaking waves occurring when a strong current passes over a shoal or other submarine obstruction or meets a contrary current or wind. (IHO Dictionary – S-32).

4) **Tide rips**

IHO Definition: Small waves formed on the surface of water by the meeting of opposing tidal currents or by a tidal current crossing an irregular bottom. (IHO Dictionary – S-32).

5) **Bombora**

IHO Definition: A wave that forms over a submerged offshore reef or rock, sometimes (in very calm weather or at high tide) nearly swelling but in other conditions breaking heavily and producing a dangerous stretch of broken water; the reef or rock itself. Also called bumbora or bomborah. (Australian National Dictionary).

22.68 Category of weed/kelp (CATWED)

Category of weed/kelp: IHO Definition:

1) **Kelp**

IHO Definition: A giant plant sometimes 60 metres long with no roots, it is anchored by hold-fasts or tendrils up to 10 metres long, that cling to rock. Gas filled bubbles on fronds act as floats keeping the kelp just below the surface. (Earth Sciences References; Mary McNeil).

2) **Seaweed**

IHO Definition: General name for marine plants of the algae class which grow in long narrow ribbons. Also called

seagrass. (International Maritime Dictionary, 2nd Edition).

3) **Seagrass**

IHO Definition: Any grass-like marine alga. Eelgrass is one of the best known seagrasses. (IHO Dictionary – S-32).

4) **Saragasso**

IHO Definition: A certain type of seaweed, or more generally, a large floating mass of this seaweed. (IHO Dictionary – S-32).

22.69 Category of wreck (CATWRK)

Category of wreck: IHO Definition:

1) **Non-dangerous wreck**

IHO Definition: A wreck which is not considered to be dangerous to surface navigation. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.105, November 2000).

2) **Dangerous wreck**

IHO Definition: A wreck submerged at such a depth as to be considered dangerous to surface navigation. (IHO Dictionary – S-32).

3) **Distributed remains of wreck**

IHO Definition: (Foul ground). An area over which it is safe to navigate but which should be avoided for anchoring, taking the ground or ground fishing. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.105, November 2000).

4) **Wreck showing mast/masts**

IHO Definition: Wreck of which only the mast(s) is visible at the sounding datum indicated. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.105, November 2000).

5) **Wreck showing any portion of hull or superstructure**

IHO Definition: Wreck of which any portion of the hull or superstructure is visible at the sounding datum indicated. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.105, November 2000).

22.70 Colour (COLOUR)

Colour: IHO Definition:

1) **White**

2) **Black**

3) **Red**

4) **Green**

5) **Blue**

6) **Yellow**

7) **Grey**

8) **Brown**

9) **Amber**

10) **Violet**

- 11) Orange
- 12) Magenta
- 13) Pink

22.71 Colour pattern (COLPAT)

Colour pattern: IHO Definition:

1) **Horizontal stripes**

IHO Definition: Straight bands or stripes of differing colours painted horizontally. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.113, November 2000).

2) **Vertical stripes**

IHO Definition: Straight bands or stripes of differing colours painted vertically. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.113, November 2000).

3) **Diagonal stripes**

IHO Definition: Straight bands or stripes of differing colours painted diagonally (i.e. not horizontally or vertically). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.113, November 2000).

4) **Squared**

IHO Definition: Often referred to as checker plate, where alternate colours are used to create squares similar to a chess or draught board. The pattern may be straight or diagonal. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.113, November 2000).

5) **Stripes (direction unknown)**

IHO Definition: Straight bands or stripes of differing colours painted in an unknown direction. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.113, November 2000).

6) **Border stripe**

IHO Definition: A band or stripe of colour which is displayed around the outer edge of the object, which may also form a border to an inner pattern or plain colour. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.113, November 2000).

22.72 Communication channel (COMCHA)

Communication channel: IHO Definition: A channel number assigned to a specific radio frequency, frequencies or frequency band. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.114, November 2000).

Expected input: Enter specific VHF-Channel.

Indication: Each VHF-Channel should be indicated in square brackets by 2 digits and up to 2 characters (A-Z).

Format: [XXXX];[XXXX];....

Example: [07] for VHF-Channel 7
[16] for VHF-Channel 16

Remarks:

- The attribute “communication channel” encodes the various VHF-Channels used for communication.
- The indication of several VHF-Channels is possible.

Comment [j242]: MD8 – 8.Cl.4 and 8.Co.5.

22.73 Condition (CONDTN)

Condition: IHO Definition:

1) **Under construction**

IHO Definition: Being built but not yet capable of function. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **Ruined**

IHO Definition: A structure in a decayed or deteriorated condition resulting from neglect or disuse, or a damaged structure in need of repair. (IHO Dictionary – S-32).

3) **Under reclamation**

IHO Definition: An area of the sea that is being reclaimed as land, usually by the dumping of earth and other material. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.118, November 2000).

4) **Wingless**

IHO Definition: A windmill or windmotor from which the vanes or turbine blades are missing. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.118, November 2000).

5) **Planned construction**

IHO Definition: Detailed planning has been completed but construction has not been initiated. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Remarks:

- The attribute “condition” encodes the various conditions of buildings and other constructions. The default “condition” should be considered to be completed, undamaged and working normally. This attribute should, therefore, only be used to indicate features whose condition is anything other than “normal”.

22.74 Conspicuous, radar (CONRAD)

Conspicuous, radar: IHO Definition:

1) **Radar conspicuous**

IHO Definition: An object which returns a strong radar echo. (IHO Dictionary, S-32).

2) **Not radar conspicuous**

IHO Definition: An object which does not return a particularly strong radar echo. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.119, November 2000).

3) **Radar conspicuous (has radar reflector)**

IHO Definition: An object which returns a strong radar echo, having a radar reflector.. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.119, November 2000).

4) **Radar conspicuous (has radar Target Enhancer)**

IHO Definition: An object which returns a strong radar echo, having a Radar Target Enhancer.

Comment [j243]: S-57
Extension 06/01.

22.75 Conspicuous, visually (CONVIS)

Conspicuous, visually: IHO Definition:

1) **Visually conspicuous**

IHO Definition: Term applied to an object either natural or artificial which is distinctly and notably visible from

seaward. (IHO Dictionary – S-32).

2) Not visually conspicuous

IHO Definition: An object which is visible from seaward, but is not conspicuous. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.120, November 2000).

22.76 Current velocity (CURVEL)

Current velocity: **IHO Definition:** The rate of travel of a current in knots. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.121, November 2000).

Unit: Knot (kt)

Resolution: 0-1kt.

Format: xx.x

Example: 1.6 for a velocity of 1.6 knots

Remarks:

- The attribute “current velocity” indicates the speed of the current in knots.

22.77 Date end (DATEND)

Date end: **IHO Definition:** .

Indication: The “date end” should be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) (e.g. April = 04) and 2 digits for the day (DD). *When no specific month and/or day is required/known, indication of the month and/or day is omitted. This conforms to ISO 8601: 1988.*

Format: CCYYMMDD (full date, mandatory)
 CCYYMM (no specific day required – mandatory)
 CCYY (no specific month required – mandatory)

Example: 20101203 for 03 December 2010 as ending date.

Remarks:

- The attribute “date end” indicates the latest date on which a feature (e.g. a buoy) will be present. This attribute is to be used to indicate the removal or cancellation of a feature at a specific date in the future. See also “periodic date end”.

Comment [j244]: MD8 – 4.Cl.7 and 4.Co.9.

Comment [j245]: MD8 – 4.Cl.10 and 4.Co.12.

22.78 Date start (DATSTA)

Date start: **IHO Definition:** .

Indication: The “date start” should be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) (e.g. April = 04) and 2 digits for the day (DD). *When no specific month and/or day is required/known, indication of the month and/or day is omitted. This conforms to ISO 8601: 1988.*

Format: CCYYMMDD (full date, mandatory)
 CCYYMM (no specific day required – mandatory)
 CCYY (no specific month required – mandatory)

Example: 20101129 for 29 November 2010 as ending date.

Remarks:

- The attribute “date start” indicates the earliest date on which a feature (e.g. a buoy) will be present. This attribute is to be used to indicate the deployment or implementation of a feature at a specific date in the future. See also “periodic date start”.

Comment [j246]: MD8 – 4.Cl.7 and 4.Co.9.

Comment [j247]: MD8 – 4.Cl.10 and 4.Co.12.

22.79 Depth range value 1 (DRVAL1)

Depth range value 1: IHO Definition: Depth range is the depth from a specified sounding datum as a depth interval bounded by the minimum (shoalest) and maximum (deepest) depth values. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

DRVAL1 defines the minimum (shoalest) value of a depth range. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.124, November 2000).

Unit: Defined in the DUNI subfield of the DSPM record or the DUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0-1m

Format: sxxxxx.x
s: sign, negative values only

Example: **50** for a minimum depth of 50 metres

Remarks:

- Where the area dries, the value is negative.

22.80 Depth range value 2 (DRVAL2)

Depth range value 2: IHO Definition: Depth range is the depth from a specified sounding datum as a depth interval bounded by the minimum (shoalest) and maximum (deepest) depth values. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

DRVAL2 defines the maximum (deepest) value of a depth range. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.125, November 2000).

Unit: Defined in the DUNI subfield of the DSPM record or the DUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0-1m

Format: sxxxxx.x
s: sign, negative values only

Example: **100** for a maximum depth of 100 metres

Remarks:

- Where the area dries, the value is negative or zero (0).

22.81 Elevation (ELEVAT)

Elevation: IHO Definition: The altitude of the ground level of an object, measured from a specified vertical datum. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.127, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m).

Resolution: 0-1m

Format: xxx.x

Example: **47** for an elevation of 47 metres

22.82 Estimated range of transmission (ESTRNG)

Estimated range of transmission: IHO Definition: The estimated range of a non-optical electromagnetic

transmission. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.128, November 2000).

Unit: Nautical mile (M)

Resolution: 0.1M

Format: xxx.x

Example: 45 for a maximum range of 45 nautical miles

Remarks:

- The estimated range (distance) assumes “in vacuo” transmission and a standard antenna height of 5 metres. Thus it gives a hint to the mariner whether **they are** likely to receive transmission at a certain distance from a **feature** carrying this attribute.

22.83 Exhibition condition of light (EXCLIT)

Exhibition condition of light: IHO Definition:

1) **Light shown without change of character**

IHO Definition: A light shown throughout the 24 hours without change of character. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.129, November 2000).

2) **Daytime light**

IHO Definition: A light which is only exhibited by day. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.129, November 2000).

3) **Fog light**

IHO Definition: A light which is exhibited in fog or conditions of reduced visibility. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.129, November 2000).

4) **Night light**

IHO Definition: A light which is only exhibited at night. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.129, November 2000).

22.84 Exposition of sounding (EXPSOU)

Exposition of sounding: IHO Definition:

1) **Within the range of depth of the surrounding depth area**

IHO Definition: The depth corresponds to the depth range of the surrounding depth area. i.e. the depth is not shoaler than the minimum depth of the surrounding depth area or deeper than the maximum depth of the surrounding depth area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.130, November 2000).

2) **Shoaler than the range of depth of the surrounding depth area**

IHO Definition: The depth is shoaler than the minimum depth of the surrounding depth area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.130, November 2000).

3) **Deeper than the range of depth of the surrounding depth area**

IHO Definition: The depth is deeper than the maximum depth of the surrounding depth area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.130, November 2000).

Remarks:

- This attribute indicates **features** with a “value of sounding” not within the range of depth of the surrounding depth area. These **features** could be a potential danger for navigation.

22.85 Function (FUNCTN)

Function: IHO Definition:

2) **Harbour-masters office**

IHO Definition: Local official who has charge of mooring and berthing of vessels, collecting harbour fees, etc. (Adapted from IHO Dictionary – S-32).

3) **Custom office**

IHO Definition: Serves as a government office where customs duties are collected, the flow of goods are regulated and restrictions enforced, and shipments or vehicles are cleared for entering or leaving a country. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **Health office**

IHO Definition: The office which is charged with the administration of health laws and sanitary inspections. (Adapted from The New Shorter Oxford English Dictionary, 1993).

5) **Hospital**

IHO Definition: An institution or establishment providing medical or surgical treatment for the ill or wounded. (The New Shorter Oxford English Dictionary, 1993).

6) **Post office**

IHO Definition: The public department, agency or organisation responsible primarily for the collection, transmission and distribution of mail. (The New Shorter Oxford English Dictionary, 1993).

7) **Hotel**

IHO Definition: An establishment, especially of a comfortable or luxurious kind, where paying visitors are provided with accommodation, meals and other services. (The New Shorter Oxford English Dictionary, 1993).

8) **Railway station**

IHO Definition: A building with platforms where trains arrive, load, discharge and depart. (The New Shorter Oxford English Dictionary, 1993).

9) **Police station**

IHO Definition: The headquarters of a local police force and that is where those under arrest are first charged. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

10) **Water-police station**

IHO Definition: The headquarters of a local water-police force. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

11) **Pilot office**

IHO Definition: The office or headquarters of pilots; the place where the services of a pilot may be obtained. (IHO Dictionary – S-32).

12) **Pilot lookout**

IHO Definition: A distinctive structure on shore from which personnel keep watch upon events at sea or along the coast. (IHO Dictionary – S-32).

13) **Bank office**

IHO Definition: An office for custody, deposit, loan, exchange or issue of money. (Adapted from The New Shorter Oxford English Dictionary, 1993).

14) **Headquarters for district control**

IHO Definition: The quarters of an executive officer (director, manager, etc.) with responsibility for an administrative area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.132, November 2000).

15) Transit shed/warehouse

IHO Definition: A building or part of a building for storage of wares or goods. (Adapted from The New Shorter Oxford English Dictionary, 1993).

16) Factory

IHO Definition: A building or buildings with equipment for manufacturing; a workshop. (The New Shorter Oxford English Dictionary, 1993).

17) Power station

IHO Definition: A stationary plant containing apparatus for large scale conversion of some form of energy (such as hydraulic, steam, chemical or nuclear energy) into electrical energy. (McGraw-Hill Dictionary of Scientific and Technical Terms, 3rd Edition, 1984).

18) Administrative

IHO Definition: A building for the management of affairs. (Adapted from The New Shorter Oxford English Dictionary, 1993).

19) Educational facility

IHO Definition: An establishment for teaching and learning (e.g. school, college, university, etc.). (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

20) Church

IHO Definition: A building for public Christian worship. (The New Shorter Oxford English Dictionary, 1993).

21) Chapel

IHO Definition: A place for Christian worship other than a parish, cathedral or church, especially one attached to a private house or institution. (The New Shorter Oxford English Dictionary, 1993).

22) Temple

IHO Definition: A building for public Jewish worship. (Adapted from The New Shorter Oxford English Dictionary, 1993).

23) Pagoda

IHO Definition: A Hindu or Buddhist temple or sacred building. (The New Shorter Oxford English Dictionary, 1993).

24) Shinto shrine

IHO Definition: A building for public Shinto worship. (Adapted from The New Shorter Oxford English Dictionary, 1993).

25) Buddhist temple

IHO Definition: See pagoda..

26) Mosque

IHO Definition: A Muslim place of worship. (The New Shorter Oxford English Dictionary, 1993).

27) Marabout

IHO Definition: A shrine marking the burial place of a Muslim holy man. (The New Shorter Oxford English Dictionary, 1993).

28) Lookout

IHO Definition: Keeping a watch upon events at sea or along the coast. (Adapted from IHO Dictionary – S-32).

29) Communication

IHO Definition: Transmitting and/or receiving electronic communication signals. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

30) Television

IHO Definition: A system for reproducing on a screen visual images transmitted (usually with sound) by radio signals. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

31) Radio

IHO Definition: Transmitting and/or receiving radio-frequency electromagnetic waves as a means of communication. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

32) Radar

IHO Definition: A method, system or technique of using beamed, reflected, and timed radio waves for detecting, locating, or tracking objects, and for measuring altitudes. (IHO Dictionary – S-32).

33) Light support

IHO Definition: A structure serving as a support for one or more lights. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

34) Microwave

IHO Definition: Broadcasting and receiving signals using microwaves. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.133, November 2000).

35) Cooling

IHO Definition: Generation of chilled liquid and/or gas for cooling purposes. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

36) Observation

IHO Definition: A place from which the surroundings can be observed but at which a watch is not habitually maintained. (Adapted from IHO Dictionary – S-32).

37) Time ball

IHO Definition: A visual time signal in the form of a ball. (IHO Dictionary – S-32).

38) Clock

IHO Definition: Instrument for measuring time and recording hours. (IHO Dictionary – S-32).

39) Control

IHO Definition: Used to control the flow of traffic within a specified range of an installation. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

40) Airship mooring

IHO Definition: Equipment or structure to secure an airship. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

41) Stadium

IHO Definition: An arena for holding and viewing events. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

42) Bus station

IHO Definition: A building where buses and coaches regularly stop to take on and/or let off passengers, especially for long-distance travel. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

43) Passenger terminal building

IHO Definition: A building with a terminal for the loading and unloading of passengers. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

44) **Sea rescue control**

IHO Definition: A unit responsible for promoting efficient organization of search and rescue services and for coordinating the conduct of search and rescue operations within a search and rescue region. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

45) **Observatory**

IHO Definition: A building designed and equipped for making observations of astronomical, meteorological, or other natural phenomena. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

46) **Ore crusher**

IHO Definition: A building or structure used to crush ore.

Comment [j248]: S-57
Extension 06/01.

22.86 Height (HEIGHT)

Height: **IHO Definition:** The value of the vertical distance to the highest point of the object, measured from a specified vertical datum. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.134, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0-1m

Format: xxx.x

Example: 73 for a height of 73 metres

Remarks:

- Height must not be used for floating features.

22.87 Horizontal clearance (HORCLR)

Horizontal clearance: **IHO Definition:** The width of an object, such as a canal or a tunnel, which is available for safe navigation. This may, or may not, be the same as the total physical width of the object. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.137, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0-1m

Format: xxx.x

Example: 125 for a width of 125 metres

22.88 Horizontal length (HORLEN)

Horizontal length: **IHO Definition:** A measurement of the longer of two linear axis. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0-1m

Format: xxx.x

Example: 95 for a width of 95 metres

22.89 Horizontal width (HORWID)

Horizontal width: IHO Definition: A measurement of the shorter of two linear axis. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0-1m

Format: xxx.x

Example: 12.6 for a width of 12.6 metres

22.90 Ice factor (ICEFAC)

Ice factor: IHO Definition: The value of the maximum variation in the vertical clearance of an overhead cable due to an accumulation of ice. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.140, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0-1m

Format: xx.x

Example: 2.5 for a reduction of 2-5 metres in the vertical clearance.

22.91 Information (INFORM)

Information: IHO Definition: Textual information about the feature. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.141, November 2000).

Remarks:

- This attribute should be used, for example, to hold the information that is shown on paper charts by cautionary and explanatory notes.
- No formatting of text is possible within INFORM. If formatted text is required, then the attribute TXTDSC must be used.

22.92 Information in national language (NINFOM)

Information in national language: IHO Definition:

Indication: Text (c...): Textual information in national language characters.

Format: c...

Example:

Remarks:

- The attribute "information in national language" encodes any textual information about an object using a specified national language.
- This attribute should be used, for example, to hold the information that is shown on paper charts by cautionary and explanatory notes.
- No formatting of text is possible within NINFOM. If formatted text is required, then the attribute NTXTDS must be used.

Comment [j249]: MD8 – 1.Cl.23 and 1.Co.16.

22.93 Jurisdiction (JURSDN)

Jurisdiction: IHO Definition: The jurisdiction applicable to an administrative area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.142, November 2000).

1) **International**

IHO Definition: Involving more than one country; covering more than one national area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.142, November 2000).

2) **National**

IHO Definition: An area administered or controlled by a single nation. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.142, November 2000).

3) **National sub-division**

IHO Definition: An area smaller than the nation in which it lies. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.142, November 2000).

22.94 Lifting capacity (LIFCAP)

Lifting capacity: IHO Definition: The specific safe lifting capacity of an object. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.145, November 2000).

Unit: Tonne (t)

Resolution: 0-1t

Format: xxx.x

Minimum value: 0

Example: **120** for a lifting capacity of 120 tonnes

22.95 Light characteristic (LITCHR)

Light characteristic: IHO Definition:

1) **Fixed**

IHO Definition: A signal light that shows continuously, in any given direction, with constant luminous intensity and colour. (IHO Dictionary – S-32).

2) **Flashing**

IHO Definition: A rhythmic light in which the total duration of light in a period is clearly shorter than the total duration of darkness and all the appearances of light are of equal duration. It may be:

- *Single flashing:* A flashing light in which a flash is regularly repeated at a rate of less than 50 flashes per minutes.
- *Group flashing:* A flashing light in which a group of two or more flashes, which are specified in number, is regularly repeated.
- *Group flashing:* A flashing light in which a group of two or more flashes, which one or more flashes, which are specified in number, is regularly repeated, and the groups comprise different numbers of flashes. (IALA International Dictionary of Aids to Marine Navigation).

3) **Long-flashing**

IHO Definition: A single-flashing light in which an appearance of light of not less than two seconds duration is regularly repeated. (IALA International Dictionary of Aids to Marine Navigation).

4) **Quick-flashing**

IHO Definition: A rhythmic light in which flashes are repeated at a rate of not less than 50 flashes per minutes but less than 80 flashes per minutes. It may be:

- *Continuous quick-flashing:* A quick-flashing light in which a flash is regularly repeated.
- *Group quick-flashing:* A quick-flashing light in which a group of two or more flashes, which are specified in number, is regularly repeated.

(IALA International Dictionary of Aids to Marine Navigation).

5) **Very quick-flashing**

IHO Definition: A rhythmic light in which flashes are repeated at a rate of not less than 80 flashes per minute but less than 160 flashes per minute. It may be:

- *Continuous very quick-flashing:* A very quick-flashing light in which a flash is regularly repeated.
- *Group very quick-flashing:* A very quick-flashing light in which a group of two or more flashes, which are specified in number, is regularly repeated.

(IALA International Dictionary of Aids to Marine Navigation).

6) **Continuous ultra quick-flashing**

IHO Definition: A rhythmic light in which flashes are regularly repeated at a rate of not less than 160 flashes per minute. (IALA International Dictionary of Aids to Marine Navigation).

Comment [j250]: MD8 – 8.Co.13.

7) **Isophased**

IHO Definition: A light with all durations of light and darkness equal. (IHO Dictionary – S-32).

8) **Occulting**

IHO Definition: A rhythmic light in which the total duration of light in a period is clearly longer than the total duration of darkness and all the eclipses are of equal duration. It may be:

- *Single-occulting:* An occulting light in which an eclipse is regularly repeated.
- *Group-occulting:* An occulting light in which a group of two or more eclipses, which are specified in number, is regularly repeated.
- *Composite group-occulting:* An occulting light in which a sequence of groups of one or more eclipses, which are specified in number, is regularly repeated, and the groups comprise different numbers of eclipses.

(IALA International Dictionary of Aids to Marine Navigation).

Comment [j251]: MD8 – 8.Co.13.

9) **Interrupted quick-flashing**

IHO Definition: A quick light in which the sequence of flashes is interrupted by regularly repeated eclipses of constant and long duration. (IHO Dictionary – S-32, Edition 5).

10) **Interrupted very quick-flashing**

IHO Definition: A light in which the very rapid alterations of light and darkness are interrupted at regular intervals by eclipses of long duration. (IHO Dictionary – S-32).

11) **Interrupted ultra quick-flashing**

IHO Definition: A light in which the ultra quick flashes (160 or more per minute) are interrupted at regular intervals by eclipses of long duration. (IHO Dictionary – S-32).

12) **Morse**

IHO Definition: A rhythmic light in which appearances of light of two clearly different durations are grouped to represent a character or characters in the Morse code. (IHO Dictionary – S-32).

13) **Fixed and flash**

IHO Definition: A rhythmic light in which a fixed light is combined with a flashing light of higher luminous intensity. (IHO Dictionary – S-32).

Comment [j252]: MD8 – 8.Co.12.

14) **Flash and long flash**

IHO Definition:

15) **Occulting and flash**

<p><u>IHO Definition:</u></p> <p>16) Fixed and long flash</p> <p><u>IHO Definition:</u></p> <p>17) Occulting alternating</p> <p><u>IHO Definition:</u></p> <p>18) Long-flash alternating</p> <p><u>IHO Definition:</u></p> <p>19) Flash alternating</p> <p><u>IHO Definition:</u></p> <p>25) Quick-flash plus long-flash</p> <p><u>IHO Definition:</u></p> <p>26) Very quick-flash plus long flash</p> <p><u>IHO Definition:</u></p> <p>27) Ultra quick-flash plus long-flash</p> <p><u>IHO Definition:</u></p> <p>28) Alternating</p> <p><u>IHO Definition:</u> A signal light that shows continuously, in any given direction, two or more colours in a regularly repeated sequence with a regular periodicity. (IALA International Dictionary of Aids to Marine Navigation).</p> <p>29) Fixed and alternating flashing</p> <p><u>IHO Definition:</u></p> <p><u>Remarks:</u></p> <ul style="list-style-type: none"> A selection of the above characteristics is defined and illustrated diagrammatically in IHO Chart Specifications, S-4 – B-471.2. 	<p>Comment [j253]: MD8 – 8.CL8 and 8.CL11.</p> <p>Comment [j254]: Value 20 (group alternating) removed – MD8 - 8.Co.10.</p> <p>Comment [j255]: MD8 – 8.CL7 and 8.Co.9.</p>
--	---

22.96 Light visibility (LITVIS)

<p>Light visibility: <u>IHO Definition:</u></p> <p>1) High intensity</p> <p><u>IHO Definition:</u> Non-marine lights with a higher power than marine lights and visible from well off shore (often "Aero" lights). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.148, November 2000).</p> <p>2) Low intensity</p> <p><u>IHO Definition:</u> Non-marine lights with lower power than marine lights. (Bundesamt für Seeschifffahrt und Hydrographie, Germany).</p> <p>3) Faint</p> <p><u>IHO Definition:</u> A decrease in the apparent intensity of a light which may occur in the case of partial obstructions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.148, November 2000).</p> <p>4) Intensified</p> <p><u>IHO Definition:</u> A light in a sector is intensified (i.e. has longer range than other sectors). (Bundesamt für Seeschifffahrt und Hydrographie, Germany).</p> <p>5) Unintensified</p>

IHO Definition: A light in a sector is unintensified (i.e. has shorter range than other sectors). (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

6) **Visibility deliberately restricted**

IHO Definition: A light sector is deliberately reduced in intensity, for example to reduce its effect on a built-up area. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.148, November 2000).

7) **Obscured**

IHO Definition: Said of the arc of a light sector designated by its limiting bearings in which the light is not visible from seaward. (IHO Dictionary – S-32).

8) **Partially obscured**

IHO Definition: This value specifies that parts of the sector are obscured.. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.148, November 2000).

9) **Visible in line of range**

IHO Definition: Lights that must be in line to be visible.. | ..

Comment [j256]: S-57
Extension 06/01.

Remarks:

- The attribute “light visibility” encodes the specific visibility of a light, with respect to the light’s intensity and ease of recognition.

22.97 Marks navigational – system of (MARSYS)

Marks navigational – System of: IHO Definition:

1) **IALA A**

IHO Definition: Navigational aids conform to the International Association of Lighthouse Authorities - IALA A system. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.149, November 2000).

2) **IALA B**

IHO Definition: Navigational aids conform to the International Association of Lighthouse Authorities - IALA B system. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.149, November 2000).

9) **No system**

IHO Definition: Navigational aids do not conform to any defined system. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.149, November 2000).

10) **Other system**

IHO Definition: Navigational aids conform to a defined system other than International Association of Lighthouse Authorities -IALA. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.149, November 2000).

22.98 Multiplicity of lights (MLTYLT)

Multiplicity of lights: IHO Definition: The number of lights of identical character that exist as a co-located group. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.150, November 2000).

Unit: None

Resolution: 1

Format: xx

Example: 5 for 5 co-located lights

22.99 Nationality (NATION)

Nationality: IHO Definition:

Indication: The nationality is encoded by a 2 character code following ISO 3166 (refer to [S-57 Appendix A](#)).

Format: c2 (**mandatory**)

Example: **AU** for Australia

Remarks:

- The attribute “nationality” indicates the nationality of the specific **feature**.

22.100 Nature of construction (NATCON)

Nature of construction: IHO Definition:

1) Masonry

IHO Definition: Constructed of stones or bricks, usually quarried, shaped, and mortared. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) Concreted

IHO Definition: Constructed of concrete, a material made of sand and gravel that is united by cement into a hardened mass used for roads, foundations, etc. (Adapted from the Illustrated Contemporary Dictionary, Encyclopedic Edition, 1978).

3) Loose boulders

IHO Definition: Constructed from large stones or blocks of concrete, often placed loosely for protection against waves or water turbulence. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.152, November 2000).

4) Hard surfaced

IHO Definition: Constructed with a surface of hard material, usually a term applied to roads surfaced with asphalt or concrete. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.152, November 2000).

5) Unsurfaced

IHO Definition: Constructed with no extra protection, usually a term applied to roads not surfaced with a hard material. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.152, November 2000).

6) Wooden

IHO Definition: Constructed from wood. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.152, November 2000).

7) Metal

IHO Definition: Constructed from metal. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.152, November 2000).

8) Glass reinforced plastic (GRP)

IHO Definition: Constructed from a plastic material strengthened with fibres of glass. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.152, November 2000).

9) Painted

IHO Definition: The application of paint to some other construction or natural feature. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.152, November 2000).

22.101 Nature of surface (NATSUR)**Nature of surface:** IHO Definition:1) **Mud**

IHO Definition: Soft, wet earth. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.153, November 2000).

2) **Clay**

IHO Definition: (Particles of less than 0.002mm); stiff, sticky earth that becomes hard when baked. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.153, November 2000).

3) **Silt**

IHO Definition: An unconsolidated sediment whose particles range in size from 0.0039 to 0.0625 millimetres in diameter (between clay and sand size). (IHO Dictionary – S-32).

4) **Sand**

IHO Definition: Loose material consisting of small but easily distinguishable, separate grains, between 0.0625 and 2.000 millimetres in diameter. (IHO Dictionary – S-32).

5) **Stone**

IHO Definition: A general term for rock fragments ranging in size from pebbles and gravel to boulders or large rock masses. (IHO Dictionary – S-32).

6) **Gravel**

IHO Definition: (Particles of 2.0-4.0mm); small stones with coarse sand. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.153, November 2000).

7) **Pebbles**

IHO Definition: A small stone worn smooth and rounded by the action of water, sand, ice, etc. ranging in diameter between 4 and 64 millimetres. (IHO Dictionary – S-32).

8) **Cobbles**

IHO Definition: A naturally rounded stone larger than a pebble. (IHO Dictionary – S-32).

9) **Rock**

IHO Definition: Any formation of natural origin that constitutes an integral part of the lithosphere. The natural occurring material that forms firm, hard, and solid masses. (Adapted from IHO Dictionary – S-32).

11) **Lava**

IHO Definition: The fluid or semi-fluid matter flowing from a volcano. The substance that results from the cooling of the molten rock. Part of the ocean bed is composed of lava. (IHO Dictionary – S-32).

14) **Coral**

IHO Definition: Hard calcareous skeletons of many tribes of marine polyps. (IHO Dictionary – S-32).

17) **Shells**

IHO Definition: Exoskeletons of various water dwelling animals. (Adapted from IHO Dictionary – S-32).

18) **Boulder**

IHO Definition: A rounded rock with diameter of 256 mm or larger. (Adapted from IHO Dictionary – S-32).

Remarks:

- The attribute “nature of surface” encodes the general nature of the material of which the land surface or the sea bed is composed.
- Mixed bottom: where the seabed comprises a mixture of material, the main constituent is given first e.g. fine sand with mud and shells would be indicated as 4,1,17.

- Mud, sand, stone, rock are terms used for the general description. Clay, silt, gravel, pebbles, cobbles are more specific terms related to particle size.

22.102 Nature of surface – qualifying terms (NATQUA)

Nature of surface – qualifying terms: IHO Definition:

1) **Fine**

IHO Definition: Falls within the smallest size continuum for a particular nature of surface term. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.155, November 2000).

2) **Medium**

IHO Definition: Falls within the moderate size continuum for a particular nature of surface term. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.155, November 2000).

3) **Coarse**

IHO Definition: Falls within the largest size continuum for a particular nature of surface term. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.155, November 2000).

4) **Broken**

IHO Definition: Fractured or in pieces. (Adapted from Webster's II New Riverside Dictionary, 1984).

5) **Sticky**

IHO Definition: Having an adhesive or glue like property. (Adapted from Webster's II New Riverside Dictionary, 1984).

6) **Soft**

IHO Definition: Not hard or firm. (Adapted from Webster's II New Riverside Dictionary, 1984).

7) **Stiff**

IHO Definition: Not pliant; thick, resistant to flow. (Adapted from Webster's II New Riverside Dictionary, 1984).

8) **Volcanic**

IHO Definition: Composed of or containing material ejected from a volcano. (Adapted from Webster's II New Riverside Dictionary, 1984).

9) **Calcareous**

IHO Definition: Composed of or containing calcium or calcium carbonate. (IHO Dictionary – S-32).

10) **Hard**

IHO Definition: Firm; usually refers to an area of the sea floor not covered by unconsolidated sediment. (IHO Dictionary – S-32 and adapted from Webster's II New Riverside Dictionary, 1984).

Remarks:

- The attribute "nature of surface - qualifying terms" encodes the nature of various forms of natural surface materials in terms of their size, morphology and consistency.

22.103 Object name (OBJNAM)

Object name: IHO Definition: The individual name of an object. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.158, November 2000).

22.104 Object name in national language (NOBJNM)**Object name in national language:** IHO Definition:Indication: Name of object (c...): String of national language characters.Format: c...Example:Remarks:

- The attribute “object name in national language” encodes the individual name of a **feature** in the specified national language.

22.105 Orientation (ORIENT)**Orientation:** IHO Definition: The angular distance measured from true north to the major axis of the object. ([Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010](#)).Unit: Degree (°)Resolution: 0-01°Format: xxx.xxMinimum value: 0Maximum value: 360Example: **246.7** for an orientation of 246.7 degrees**22.106 Periodic date end (PEREND)****Periodic date end:** IHO Definition: The end of the active period for a seasonal feature (e.g. a buoy). See also “date end”. ([S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.160, November 2000](#)).Indication: The “periodic date end” should be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) (e.g. April = 04) and 2 digits for the day (DD). When no specific year is required (i.e. the object is removed at the same time each year) the following two cases may be considered:

- same day each year: --MMDD
- same month each year: --MM

This conforms to ISO 8601:1988.

Format: CCYYMMDD (full date, **mandatory**)--MMDD (same day each year, **mandatory**)--MM (same month each year, **mandatory**)Example: **--1015** for an ending date of 15 October each year.**22.107 Periodic date start (PERSTA)****Periodic date start:** IHO Definition: The start of the active period for a seasonal feature (e.g. a buoy). See also “date start”. ([S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.161, November 2000](#)).Indication: The “periodic date start” should be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) (e.g. April = 04) and 2 digits for the day (DD). When no specific year is required (i.e. the object is removed at the same time each year) the following two cases may be considered:

- same day each year: --MMDD

- same month each year: --MM

This conforms to ISO 8601:1988.

Format: CCYYMMDD (full date, **mandatory**)

--MMDD (same day each year, **mandatory**)

--MM (same month each year, **mandatory**)

Example: --04 for an operation starting in April each year.

22.108 Pictorial representation (PICREP)

Pictorial representation: **IHO Definition:** Indicates whether a pictorial representation of the object is available. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.162, November 2000).

Indication: The string encodes the file name of an external graphic file (pixel/vector).

Remarks:

- The “pictorial representation” could be a drawing or a photo.

22.109 Pilot district (PILDST)

Pilot district: **IHO Definition:** The area in which a particular pilotage service operates. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.163, November 2000).

22.110 Pilot district in national language (NPLDST)

Pilot district in national language: **IHO Definition:**

Indication: Pilot district (c...): String of national language characters.

Format: c...

Example:

Remarks:

- The attribute “pilot district in national language” encodes the pilot district for which a pilot station is responsible in the specified national language.

22.111 Product (PRODCT)

Product: **IHO Definition:**

1) Oil

IHO Definition: A thick, slippery liquid that will not dissolve in water, usually petroleum based in the context of storage tanks. (Adapted from the Oxford Minidictionary, Third Edition).

2) Gas

IHO Definition: A substance with particles that can move freely, usually a fuel substance in the context of storage tanks. (Adapted from the Oxford Minidictionary, Third Edition).

3) Water

IHO Definition: A colourless, odourless, tasteless liquid that is a compound of hydrogen and oxygen. (Adapted from the Oxford Minidictionary, Third Edition).

4) Stone

IHO Definition: A general term for rock fragments. (IHO Dictionary – S-32).

5) **Coal**

IHO Definition: A hard black mineral that is burned as fuel. (Adapted from the Oxford Minidictionary, Third Edition).

6) **Ore**

IHO Definition: A solid rock or mineral from which metal is obtained. (Adapted from the Oxford Minidictionary, Third Edition).

7) **Chemicals**

IHO Definition: Any substance obtained by or used in a chemical process. (Adapted from the Oxford Minidictionary, Third Edition).

8) **Drinking water**

IHO Definition: Water that is suitable for human consumption. (Adapted from the Oxford Minidictionary, Third Edition).

9) **Milk**

IHO Definition: A white fluid secreted by female mammals as food for their young. (Adapted from the Oxford Minidictionary, Third Edition).

10) **Bauxite**

IHO Definition: A mineral from which aluminum is obtained. (Adapted from the Oxford Minidictionary, Third Edition).

11) **Coke**

IHO Definition: A solid substance obtained after gas and tar have been extracted from coal, used as a fuel. (Adapted from the Oxford Minidictionary, Third Edition).

12) **Iron ingots**

IHO Definition: An oblong lump of cast iron metal. (Adapted from the Oxford Minidictionary, Third Edition).

13) **Salt**

IHO Definition: Sodium chloride obtained from mines or by the evaporation of sea water. (Adapted from the Oxford Minidictionary, Third Edition).

14) **Sand**

IHO Definition: Tiny grains of crushed or worn rock. (Adapted from the Oxford Minidictionary, Third Edition).

15) **Timber**

IHO Definition: Wood prepared for use in building or carpentry. (Adapted from the Oxford Minidictionary, Third Edition).

16) **Sawdust/wood chips**

IHO Definition: Powdery fragments of wood made in sawing timber or coarse chips produced for use in manufacturing pressed board. (Adapted from the Oxford Minidictionary, Third Edition).

17) **Scrap metal**

IHO Definition: Discarded metal suitable for being reprocessed. (Adapted from the Oxford Minidictionary, Third Edition).

18) **Liquefied natural gas (LNG)**

IHO Definition: Natural gas that has been liquefied for ease of transport by cooling the gas to -162 Celsius. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

19) **Liquefied petroleum gas (LPG)**

IHO Definition: A compressed gas consisting of flammable light hydrocarbons and derived from petroleum. (Adapted from the Websters ~~Third~~ New World Dictionary).

20) **Wine**

IHO Definition: The fermented juice of grapes. (Adapted from the Websters New World Dictionary).

21) **Cement**

IHO Definition: A substance made of powdered lime and clay, mixed with water. (Adapted from the Websters New World Dictionary).

22) **Grain**

IHO Definition: A small hard seed, especially that of any cereal plant such as wheat, rice, corn, rye etc. (Adapted from the Websters New World Dictionary).

Remarks:

- The attribute "product" encodes the various substances which are transported, stored or exploited.

22.112 Publication reference (PUBREF)

Publication reference: IHO Definition: A reference to a nautical publication. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.168, November 2000).

Indication: The string encodes the reference to a specific paragraph from a nautical publication.

Example: **United States Coast Pilot No 1 1992 (27th) edition, Atlantic Coast, Eastport to Cape Cod, Chapter 3, Paragraph 2**

22.113 Quality of sounding measurement (QUASOU)

Quality of sounding measurement: IHO Definition:

1) **Depth known**

IHO Definition: The depth from the chart datum to the bottom (or to the top of a drying feature) is known. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **Depth or least depth unknown**

IHO Definition: The depth from chart datum to the bottom, or the shoalest depth of the feature is unknown. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.169, November 2000, as amended).

3) **Doubtful sounding**

IHO Definition: A depth that may be less than indicated. (Adapted from IHO Dictionary – S-32).

4) **Unreliable sounding**

IHO Definition: A depth that is considered to be an unreliable value. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.169, November 2000).

5) **No bottom found at value shown**

IHO Definition: Upon investigation the bottom was not found at this depth. (Adapted from IHO Dictionary – S-32).

6) **Least depth known**

IHO Definition: The shoalest depth over a feature is of known value. (Adapted from IHO Dictionary – S-32).

7) **Least depth unknown, safe clearance at value shown**

Comment [j257]: MD8 – 4.Co.11.

IHO Definition: The least depth over a feature is unknown, but there is considered to be safe clearance at this depth. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.169, November 2000).

8) **Value reported (not surveyed)**

IHO Definition: Depth obtained from a report, but not fully surveyed. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.169, November 2000).

9) **Value reported (not confirmed)**

IHO Definition: Depth value obtained from a report, which it has not been possible to confirm. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.169, November 2000).

10) **Maintained depth**

IHO Definition: The depth at which a channel is kept by human influence, usually by dredging. (IHO Dictionary – S-32).

11) **Not regularly maintained**

IHO Definition: Depths may be altered by human influence, but will not be routinely maintained. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.169, November 2000).

Remarks:

- The attribute “quality of sounding measurement” indicates the reliability of the value of sounding.

22.114 Radar wave length (RADWAL)

Radar wave length: **IHO Definition:** The distance between two successive peaks (or other points of identical phase) on an electromagnetic wave in the radar band of the electromagnetic spectrum. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.172, November 2000).

Indication: The wavelength and the band code character is indicated. In the case where two bands should be encoded, these should be separated by a comma.

Unit: Metre (m)

Resolution: 0.01m

Format: V.VV-B
V.VV-B,V.VV.B

“VV.VV” encodes the value of wavelength;
“B” encodes the band;
each separated by a hyphen (“-”).

Example: The radar transponder beacon wavelength “3cm (X) – Band” is indicated as **0.03-X**.

Remarks:

- The attribute “radar transponder beacon wavelength” encodes the specific wavelength at which a radar transponder beacon transmits.
- Radar transponder beacons generally work on the following wavelengths:
 - 3cm (X) - Band
 - 10cm (S) - Band
 Nevertheless, wavelengths outside the marine band are used.

22.115 Radius (RADIUS)

Radius: **IHO Definition:** The vector extending from the centre to the periphery of a circular or spherical object. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.173, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre

(m)
Resolution: 0-1m
Format: xxx.x
Example: 26 for a radius of 26 metres

22.116 Recording date (RECDAT)

Recording date: IHO Definition: The date when the specific object or cartographic primitive was captured, edited or deleted.

Indication: The source should be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) and 2 digits for the day (DD), according to ISO 8601:1988.

Format: CCYYMMDD (full date, mandatory)
 CCYYMM (no specific day required – mandatory)
 CCYY (no specific month required – mandatory)

Example: 19930112 for 12 January 1993 as recording date.

Comment [j258]: MD8 – 4.Cl.10 and 4.Co.12. Should this be included for this attribute?

22.117 Recording indication (RECIND)

Recording indication IHO Definition: The procedure for the encoding and entering of data.

Indication:

Country (c2): (**mandatory**): Two letter code from ISO 3166 (refer to S-62)

Authority (c2): (**mandatory**): A string of two alphanumeric characters (refer to S-62), e.g. German Bundesamt für Seeschifffahrt und Hydrographie = DE; US National Imagery and Mapping Agency = U1.

Procedure (c4): Digitised = digi
 Scanned = scan
 Alpha/numeric input = alph

Format: c2,c2,c4 (**mandatory**)

Example: DK,D1,digi

22.118 Reference year of magnetic variation (RYRMGV)

Reference year for magnetic variation: IHO Definition: The reference calendar year for magnetic variation values. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.176, November 2000).

Unit: Four digit year indication (CCYY)

Format: CCYY

Example: 2009

22.119 Restriction (RESTRN)

Restriction: IHO Definition:

1) Anchoring prohibited

IHO Definition: An area within which anchoring is not permitted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.177, November 2000).

2) Anchoring restricted

IHO Definition: A specified area designated by appropriate authority, within which anchoring is restricted in accordance with certain specified conditions. An area within which anchoring is not permitted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.177, November 2000).

3) Fishing prohibited

IHO Definition: An area within which fishing is not permitted. An area within which anchoring is not permitted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.177, November 2000).

4) Fishing restricted

IHO Definition: A specified area designated by appropriate authority, within which fishing is restricted in accordance with certain specified conditions. An area within which anchoring is not permitted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.177, November 2000).

5) Trawling prohibited

IHO Definition: An area within which trawling is not permitted. An area within which anchoring is not permitted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.177, November 2000).

6) Trawling restricted

IHO Definition: A specified area designated by appropriate authority, within which trawling is restricted in accordance with certain specified conditions. An area within which anchoring is not permitted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

7) Entry prohibited

IHO Definition: An area within which navigation and/or anchoring is prohibited. (Adapted from IHO Dictionary – S-32).

8) Entry restricted

IHO Definition: A specified area designated by appropriate authority, within which navigation is restricted in accordance with certain specified conditions. (Adapted from IHO Dictionary – S-32).

9) Dredging prohibited

IHO Definition: An area within which dredging is not permitted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

10) Dredging restricted

IHO Definition: A specified area designated by appropriate authority, within which dredging is restricted in accordance with certain specified conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

11) Diving prohibited

IHO Definition: An area within which diving is not permitted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

12) Diving restricted

IHO Definition: A specified area designated by appropriate authority, within which diving is restricted in accordance with certain specified conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

13) No wake

IHO Definition: Mariners must adjust the speed of their vessels to reduce the wave or wash which may cause erosion or disturb moored vessels. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

14) Area to be avoided

IHO Definition: A routing measure comprising an area within defined limits in which either navigation is particularly hazardous or it is exceptionally important to avoid casualties and which should be avoided by all

ships, or certain classes of ships. (IHO Dictionary – S-32).

15) Construction prohibited

IHO Definition: The erection of permanent or temporary fixed structures or artificial islands is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

16) Discharging prohibited

IHO Definition: An area within which discharging or dumping is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

17) Discharging restricted

IHO Definition: A specified area designated by an appropriate authority, within which discharging or dumping is restricted in accordance with specified conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

18) Industrial or mineral exploration/development prohibited

IHO Definition: An area within which industrial or mineral exploration and development are prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

19) Industrial or mineral exploration/development restricted

IHO Definition: A specified area designated by an appropriate authority, within which industrial or mineral exploration and development is restricted in accordance with certain specified conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

20) Drilling prohibited

IHO Definition: An area within which excavating a hole on the sea-bottom with a drill is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

21) Drilling restricted

IHO Definition: A specified area designated by an appropriate authority, within which excavating a hole on the sea-bottom with a drill is restricted in accordance with certain specified conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

22) Removal of historical artefacts prohibited

IHO Definition: An area within which the removal of historical artefacts is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

23) Cargo transhipment (lightening) prohibited

IHO Definition: An area in which cargo transhipment (lightening) is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

24) Dragging prohibited

IHO Definition: An area in which the dragging of anything along the bottom, e.g. bottom trawling, is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

25) Stopping prohibited

IHO Definition: An area in which a vessel is prohibited from stopping. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.178, November 2000).

26) Landing prohibited

IHO Definition: An area in which landing is prohibited. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.179, November 2000).

27) Speed restricted

IHO Definition: An area within which speed is restricted. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.179, November 2000).

28) **Swimming prohibited**

IHO Definition: An area in which swimming is prohibited.

Remarks:

- The official legal status of each kind of restricted area defines the kind of restriction(s), e.g. the restriction for a “game preserve” may be “entry prohibited”, the restriction for an “fish sanctuary” may be “fishing restricted”.
- The complete information about the restriction(s), actually held in handbooks or other publications, may be encoded by the attribute TXTDSC. A short explanation may be given by the use of the attribute INFORM.

Comment [j259]: S-57
Extension 06/01.

22.120 Scale minimum (SCAMIN)

Scale minimum: **IHO Definition:** The minimum scale at which the feature may be used e.g. for ECDIS presentation.

Minimum value: 1

Indication: The modulus of the scale is indicated, that is 1:1 250 000 is encoded as 1250000.

Unit: None

Resolution: 1

Format: xxxxxxxx

Example: If a particular minimum scale is specified as 1:89 999 (encoded as **89999**), and an example of a smaller scale would be 1:179 999 (encoded as **179999**).

The SCAMIN value of a feature determines the display scale below which the feature is no longer displayed. Its purpose is to reduce clutter, to prioritise the display of features and to improve display speed. In encoding its value, the producing authority should consider these factors, as well as the scale at which the feature is no longer likely to be required for navigation.

In order to optimise the performance and clarity of the ENC, it is a mandatory requirement on ENCs that SCAMIN is used.

Remarks:

- SCAMIN only affects the display of a feature on an ECDIS, not its presence in the SENC.
- If SCAMIN is not encoded, the feature is displayed at all scales.
- Where SCAMIN is used, it must always be set to a scale less (i.e. to a smaller scale) than or equal to the optimum display scale of the data as described in clause X.X. Failure to follow this rule will mean that features will not be displayed on the ECDIS until the overscale warning is activated.
- Group 1 and Meta features must always be displayed. Therefore, SCAMIN must not be encoded on Group 1 and Meta features.
- If the same feature exists in cells of different optimum display scales, the same SCAMIN value must be assigned to each occurrence of the feature.

INSERT S-65 INFORMATION ON SCAMIN HERE??????

22.121 Sector limit one (SECTR1)

Sector limit one: **IHO Definition:** A sector is the part of a circle between two straight lines drawn from the centre to the circumference. (Advanced Learner's Dictionary, 2nd Edition).

Sector limit 1 specifies the first limit of the sector. The order of sector limit 1 and sector limit 2 is clockwise around the central object (e.g. a light). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.184, November 2000).

Unit: Degree (°)

Resolution: 0.01°

Format: xxx.xx

Example: 125 for a sector orientation of 125 degrees

Remarks:

- The values given to the common limits of adjacent sectors should be identical.
- The orientation of bearing is from seaward to the central object. This conforms with the method used in “List of Lights” publications.
- A generic term such as “to shore” cannot be used; a specific bearing must be encoded. Where a light sector limit is defined as “to the shore”, it should be encoded using a value that ensures that, when the limit is drawn, it will fall entirely on land.

22.122 Sector limit two (SECTR2)

Sector limit two: IHO Definition: A sector is the part of a circle between two straight lines drawn from the centre to the circumference. (Advanced Learner’s Dictionary, 2nd Edition).

Sector limit 2 specifies the second limit of the sector. The order of sector limit 1 and sector limit 2 is clockwise around the central object (e.g. a light). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.185, November 2000).

Unit: Degree (°)

Resolution: 0.01°

Format: xxx.xx

Example: 220 for a sector orientation of 220 degrees

Remarks:

- The values given to the common limits of adjacent sectors should be identical.
- The orientation of bearing is from seaward to the central object. This conforms with the method used in “List of Lights” publications.
- A generic term such as “to shore” cannot be used; a specific bearing must be encoded. Where a light sector limit is defined as “to the shore”, it should be encoded using a value that ensures that, when the limit is drawn, it will fall entirely on land.

22.123 Signal frequency (SIGFRQ)

Signal frequency: IHO Definition: The frequency of a signal. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.187, November 2000).

Unit: Hertz (Hz)

Resolution: 1 Hz

Format: xxxxxxxxxxxx

Example: 95000000 for a radio signal centred on 950 MHz

Comment [j260]: MD8 – 2.Cl.7 and 2.Co.6.

22.124 Signal generation (SIGGEN)

Signal generation: IHO Definition: The mechanism used to generate a fog signal.

1) **Automatically**

IHO Definition: Signal generation is initiated by a self regulating mechanism such as a timer or light sensor. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.188, November 2000).

2) **By wave action**

IHO Definition: The signal is generated by the motion of the sea surface such as a bell in a buoy. (S-57, Appendix

A – Chapter 2, Edition 3.1, Page 2.188, November 2000).

3) By hand

IHO Definition: The signal is generated by a manually operated mechanism such as a hand. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.188, November 2000).
cranked siren.

4) By wind

IHO Definition: The signal is generated by the motion of air such as a wind driven whistle. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.188, November 2000).

Remarks:

- The attribute “signal generation” encodes the mechanism used to generate a fog signal.

22.125 Signal group (SIGGRP)

Signal group: **IHO Definition:** The number of signals, the combination of signals or the Morse character(s) within one period of full sequence. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.189, November 2000).

Indication: The signal group of a light is encoded using brackets to separate the individual groups. A group of signals may be a single number, a chain of numbers separated by "+", a sequence of up to 4 letters or a letter and a number.

A fixed light has no signal group.

Where no specific signal group is given for one of the light characteristics, this should be shown by an empty pair of brackets.

Format: (c)(c)...

Examples:

Light characteristic	SIGGRP Indication
VQ(6)+LFI ->	(6)(1)
LFI+FI(2+3) ->	(1)(2+3)
FI(2)+LFI ->	(2)(1)
FFI ->	()(1)
Mo(AA) ->	(AA)
AlFI(2W+1R) ->	(2+1)
AlLFIWR ->	(1)
FOcW ->	()(1)
AlOc(4)WR ->	(4)
AlWR ->	()
Iso ->	(1)
IQ ->	()

Comment [j261]: MD8 – 8.Cl.10 and 8.Co.8.

Comment [j262]: MD8 – 8.Cl.6 and 8.Co.7).

22.126 Signal period (SIGPER)

Signal period: **IHO Definition:** The time occupied by an entire cycle of intervals of light and eclipse. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.190, November 2000).

Unit: Seconds (s)

Resolution: 0.01s

Format: xx.xx

Minimum value: > 0

Example: 12 for an interval of 12 seconds

Comment [j263]: MD8 – 7.Co.19.

22.127 Signal sequence (SIGSEQ)

<p>Signal sequence: <u>IHO Definition:</u> The sequence of times occupied by intervals of light and eclipse for all "light characteristics" except for occulting where the sequence of times is occupied by intervals of eclipse and light. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.191, November 2000).</p> <p><u>Unit:</u> Seconds (s)</p> <p><u>Resolution:</u> 0.01s</p> <p><u>Format (all non-fixed "light characteristics" except occulting):</u> $LL.LL+(EE.EE)$</p> <p><u>Example:</u> $00.80+(02.20)+00.80+(05.20)$</p> <p>The above example encodes a signal sequence for a flashing light with two intervals of light (L) and two intervals of eclipse (E). Note: the above example has a signal group of (2) and a signal period of 9 seconds.</p> <p><u>Format (occulting):</u> $(EE.EE)+LL.LL$</p> <p><u>Example:</u> $(00.80)+02.20+(00.80)+05.20$</p> <p>The above example encodes a signal sequence for an occulting light with two intervals of eclipse (E) and two intervals of light (L). Note: the above example has a signal group of (2) and a signal period of 9 seconds.</p> <p><u>Remarks:</u></p> <ul style="list-style-type: none"> The "signal sequence" for all "light characteristics" except for occulting is indicated using a fixed format to encode the value of intervals of light (L) and eclipse (E). For occulting lights, the "signal sequence" is indicated using a fixed format to encode the values of intervals of eclipse (E) and light (L). 	<p>Comment [j264]: MD8 – 5.Co.5.</p> <p>Comment [j265]: MD8 – 5.Co.5.</p> <p>Comment [j266]: MD8 – 5.Co.5.</p> <p>Comment [j267]: MD8 – 5.Co.5.</p> <p>Comment [j268]: MD8 – 2.CL8</p>
--	---

22.128 Status (STATUS)

<p>Status: <u>IHO Definition:</u></p> <ol style="list-style-type: none"> Permanent <u>IHO Definition:</u> Intended to last or function indefinitely. (The Concise Oxford Dictionary, 7th Edition). Occasional <u>IHO Definition:</u> Acting on special occasions; happening irregularly. (The Concise Oxford Dictionary, 7th Edition). Recommended <u>IHO Definition:</u> Presented as worthy of confidence, acceptance, use, etc. (The Macquarie Dictionary, 1988). Not in use <u>IHO Definition:</u> Use has ceased, but the facility still exists intact; disused. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010). Periodic/intermittent <u>IHO Definition:</u> Recurring at intervals. (The Concise Oxford Dictionary, 7th Edition). Reserved <u>IHO Definition:</u> Set apart for some specific use. (Adapted from The Concise Oxford Dictionary, 7th Edition).
--

- 7) **Temporary**
IHO Definition: Meant to last only for a time. (The Concise Oxford Dictionary).
- 8) **Private**
IHO Definition: Administered by an individual or corporation, rather than a State or a public body. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).
- 9) **Mandatory**
IHO Definition: Compulsory; enforced. (The Concise Oxford Dictionary, 7th Edition).
- 11) **Extinguished**
IHO Definition: No longer lit. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.197, November 2000).
- 12) **Illuminated**
IHO Definition: Lit by floodlights, strip lights, etc. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.198, November 2000).
- 13) **Historic**
IHO Definition: Famous in history; of historical interest. (The Concise Oxford Dictionary, 7th Edition).
- 14) **Public**
IHO Definition: Belonging to, available to, used or shared by, the community as a whole and not restricted to private use. (Adapted from The New Shorter Oxford English Dictionary, 1993).
- 15) **Synchronised**
IHO Definition: Occur at a time, coincide in point of time, be contemporary or simultaneous. (The New Shorter Oxford English Dictionary, 1993).
- 16) **Watched**
IHO Definition: Looked at or observed over a period of time especially so as to be aware of any movement or change. (adapted from The New Shorter Oxford English Dictionary, 1993).
- 17) **Un-watched**
IHO Definition: Usually automatic in operation, without any permanently-stationed personnel to superintend it. (Adapted from IHO Dictionary – S-32).
- 18) **Existence doubtful**
IHO Definition: An object that has been reported but has not been definitely determined to exist. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.198, November 2000).
- 19) **Buoyed**
IHO Definition: Marked by buoys. (Australian Hydrographic Service).

22.129 Technique of sounding measurement (TECSOU)

Technique of sounding measurement: IHO Definition:

1) **Found by echo-sounder**

IHO Definition: The depth was measured by using an instrument that determines depth of water by measuring the time interval between emission of a sonic or ultrasonic signal and return of its echo from the bottom. (Adapted from IHO Dictionary – S-32).

2) **Found by side scan sonar**

IHO Definition: The depth was computed from a record produced by active sonar in which fixed acoustic beams

are directed into the water perpendicularly to the direction of travel to scan the bottom and generate a record of the bottom configuration. (Adapted from IHO Dictionary – S-32).

3) **Found by multi-beam**

IHO Definition: The depth was **measured** by using a wide swath echo sounder that uses multiple beams to measure depths directly below and transverse to the ship's track. (Adapted from IHO Dictionary – S-32).

4) **Found by diver**

IHO Definition: The depth was **measured** by a person skilled in the practice of diving. (Adapted from IHO Dictionary – S-32).

5) **Found by lead-line**

IHO Definition: The depth was **measured** by using a line, graduated with attached marks and fastened to a sounding lead. (Adapted from IHO Dictionary – S-32).

6) **Swept by wire-drag**

IHO Definition: The given area was determined to be free from navigational dangers to a certain depth by towing a buoyed wire at the desired depth by two launches, or a least depth was identified using the same technique. (Adapted from IHO Dictionary – S-32).

7) **Found by laser**

IHO Definition: The depth was **measured** by using an instrument that measures distance by emitting timed pulses of laser light and measuring the time between emission and reception of the reflected pulses. (Adapted from IHO Dictionary – S-32).

8) **Swept by vertical acoustic system**

IHO Definition: The given area has been swept using a system comprised of multiple echo sounder transducers attached to booms deployed from the survey vessel. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.207, November 2000).

9) **Found by electromagnetic sensor**

IHO Definition: The depth was **measured** by using an instrument that compares electromagnetic signals. (Adapted from IHO Dictionary – S-32).

10) **Photogrammetry**

IHO Definition: The depth was determined by applying mathematical techniques to photographs. (Adapted from IHO Dictionary – S-32).

11) **Satellite imagery**

IHO Definition: The depth was determined by using instruments placed aboard an artificial satellite. (Adapted from IHO Dictionary – S-32).

12) **Found by levelling**

IHO Definition: The depth was **measured** by using levelling techniques to find the elevation of the point relative to a datum. (Adapted from IHO Dictionary – S-32).

13) **Swept by side-scan sonar**

IHO Definition: The given area was determined to be free from navigational dangers to a certain depth by towing a side-scan-sonar. (Adapted from IHO Dictionary – S-32).

14) **Computer generated**

IHO Definition: The sounding was determined from a bottom model constructed using a computer. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.207, November 2000).

22.130 Textual description (TXTDSC)

Textual description: IHO Definition:

Indication: The string encodes the file name of an external text file that contains the text in English.

Remarks:

- The attribute “textual description” indicates that a file containing text extracted from relevant pilot books or nautical publications is available.
- The attribute is generally used for long text strings or those that require formatting, however, there is no restriction on the type of text (except for lexical level) that can be held in files referenced by TXTDSC.

Comment [j269]: MD8 – 1.Cl.22 and 1.Co.15.

22.131 Textual description in national language (NXTDSC)

Textual description in national language: IHO Definition:

Indication: The string encodes the file name of an external text file that contains the text in a national language.

Remarks:

- The attribute is generally used for long text strings or those that require formatting, however, there is no restriction on the type of text (except for lexical level) that can be held in files referenced by NXTDSC.

Comment [j270]: MD8 – 1.Cl.24 and 1.Co.17.

22.132 Tidal stream – panel values (TS_TSP)

Tidal stream – panel values: IHO Definition:

Indication: The direction in degrees and velocity in knots are encoded in pairs. Each value separated by a comma.

Example:

63230,Darwin,HW,124,2.2,128,2.1,125,2.9,116,2.8,110,2.0,095,0.6,020,0.2,320,1.9,315,2.1,300,2.8,268,2.6,200,2.4,1

Remarks:

- The attribute “Tidal stream - panel values” encodes the identification of the reference station with reference water and the direction of the flow and the springs rate from 6 hours before to 6 hours after high water (HW) or low water (the reference station, at hourly intervals.
- The intention of this formatted attribute is to provide the ECDIS with the required standard format to enable the equ of a paper chart tide stream panel in tabular format to be viewed on the ECDIS display.
- Where a rate is 0.0, the associated (preceding) value for the direction of flow cannot have a direction. In such cases place in the list must be left empty and a delimiting comma must be encoded, i.e. ...,0,0,... Similarly, values in that are unknown must also be left empty.
- The relationship to a reference station is encoded using a collection feature.

22.133 Tidal stream, current – time series values (TS_TSV)

Tidal stream, current – time series values: IHO Definition:

Indication: The direction in degrees and velocity in knots are encoded in pairs. Each value separated by a comma.

Example: 135,1.5,156,1.9,301,1.1,342,0.9

Remarks:

- The attribute “Tidal stream, current - time series values” encodes values for a direction and velocity time series.

22.134 Tide – accuracy of water level (T_ACWL)

Tide – accuracy of water level: IHO Definition:

- 1) **Better than 0.1m and 10 minutes**
- 2) **Worse than 0.1m and 10 minutes**

Remarks:

- The attribute “Tide - accuracy of water level” encodes the accuracy of the water level, to the confidence level of 95%.

22.135 Tide – high and low water values (T_HWLW)

Tide – high and low water values: IHO Definition:

Indication: Dates/times and heights are to be encoded in pairs, each value separated by a comma.

The date/time **must** be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) (e.g. April = 04) and 2 digits for the day (DD), separated by a capital “T” from the hour (hh) and minutes (mm) which **must** each be encoded using 2 digits. This conforms to ISO 8601:1988. Seconds should not be used.

The height **must** be given in metres (xx.x) with a resolution of 0.1 metre.

Format: CCYYMMDDThhmm,xx.x,CCYYMMDDThhmm,xx.x

Example: 20130428T1020,1.2,20130428T1455,4.8,...

Remarks:

- The attribute “tide - high and low water values” encodes information on the times and heights of high and low waters for each day of the duration of the time series.

22.136 Tide – method of tidal prediction (T_MTOD)

Tide – method of tidal prediction: IHO Definition:

- 1) **Simplified harmonic method of tidal prediction**

IHO Definition: Prediction of tidal heights by combining a simplified set of harmonic constituents into a single time/height curve. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.214, November 2000).

- 2) **Full harmonic method of tidal prediction**

IHO Definition: Prediction of tidal heights by combining a complete set of harmonic constituents into a single time/height curve. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.214, November 2000).

- 3) **Time and height difference non-harmonic method**

IHO Definition: Prediction of high and low water times and heights by modification of the high and low water times and heights of a known time/height curve. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.214, November 2000).

Remarks:

- The attribute “Tide - method of tidal prediction” encodes the various methods of tidal prediction.

22.137 Tide – time and height differences (T_THDF)

Tide – time and height differences: IHO Definition:

Indication:

Time difference in hours and minutes: \pm hhmm (according to ISO 8106: 1988)

Height difference: metres (preceded with “-“ if negative value)

Rate difference: knots (preceded with “-“ if negative value)

Example:

Tidal height: **63230,Darwin,-0040,-0.7,0.9**

Tidal stream: **59060,Cairns,+0130,1.2,-0.7**

Remarks:

- The attribute “tide - time and height differences” encodes the time and tidal height or tidal stream rate difference comparative to a reference station.
- The format is the same for tides and tidal streams, with height difference being replaced by rate difference. The relation to a reference station is encoded by the use of a [collection feature](#).
- The attribute is used to contain the identification of the reference station and, encoded in triplets, mean time difference (+ or -), height or rate difference for mean high water or mean high rate (preceded with “-“ if negative value), height or rate difference for mean low water or mean low rate (preceded with “-“ if negative value), each value separated by a comma.

22.138 Tide – time series values (T_TSVL)

Tide – time series values: IHO Definition:

Indication: The height above or below (-ve) datum. Each value separated by a comma.

Example: **0.2,0.1,0.0,-0.1,-0.2,-0.1,0.0,0.1**

Remarks:

- The attribute “tide - time series values” encodes the values of a time series.

22.139 Tide – value of harmonic constituents (T_VAHC)

Tide – value of harmonic constituents: IHO Definition: Harmonic constituents are the harmonic elements in a mathematical expression for the tide producing force and in the corresponding formula for the tidal curve. Each constituent represents a periodic change or variation in the relative positions of the earth, moon and sun. (*Adapted from IHO Dictionary – S-32*).

Indication: The first [value](#) is the number of columns (C, always 2) and the second is the number of rows (R). The next value(s) (C times) indicates the name(s) of the columns, and the next value(s) (R times) indicates the name(s) of the rows (*i.e.* constituents). Here after follow the values (C x R times) of amplitude and phase.

Example: The following example encodes the amplitude and the phase for M2, S2, K1 and O1:

2,4,amplitude,phase,M2,S2,K1,O1,0.962,165,0.361,243,1.223,097,0.875,143

	amplitude	phase
M2	0.962	165
S2	0.361	243
K1	1.223	097
O1	0.875	143

Remarks:

- The attribute “tide - value of harmonic constituents” contains a 2 dimensional array of harmonic constituents.

22.140 Tide, current – time interval of values (T_TINT)

Time, current – time interval of values: IHO Definition:

Unit: Minute

Resolution: 1 minute.

Format: xxx

Example: 60 for a time interval of 60 minutes

Remarks:

- The attribute “Tide, current - time interval of values” encodes the interval between the values in any time series, e.g. tidal, current or other data.

Comment [j271]: MD8 – 2.Co.7 and 2.Cl.9

Comment [j272]: MD8 – 2.Co.7 and 2.Cl.9

22.141 Time end (TIMEND)

Time end: IHO Definition:

Indication: The “time end” **must** consist of a date and a time separated by a capital “T”. The date **must** be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) (e.g. April = 04) and 2 digits for the day (DD). The time **must** be encoded using 2 digits for the hour (hh), 2 digits for the minutes (mm) and 2 digits for the seconds (ss). This conforms to ISO 8601:1988.

Format: CCYYMMDDThhmmss (**mandatory**)

Example: 20120426T094500 for a period ending at 09:45 am on 26 April 2012.

Remarks:

- The attribute “time end” indicates the end of an active period.

22.142 Time start (TIMSTA)

Time start: IHO Definition:

Indication: The “time start” **must** consist of a date and a time separated by a capital “T”. The date **must** be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) (e.g. April = 04) and 2 digits for the day (DD). The time **must** be encoded using 2 digits for the hour (hh), 2 digits for the minutes (mm) and 2 digits for the seconds (ss). This conforms to ISO 8601:1988.

Format: CCYYMMDDThhmmss (**mandatory**)

Example: 20120212T162000 for a period starting at 04:20 pm on 12 February 2012.

Remarks:

- The attribute “time start” indicates the start of an active period.

22.143 Topmark/daymark shape (TOPSHP)

Topmark/daymark shape: IHO Definition:

Cone: A solid figure generated by straight lines drawn from a fixed point (the vertex) to a circle in a plane not containing the vertex. (The New Shorter Oxford English Dictionary, 1993, vol 2).

Cones are commonly used as International Association of Lighthouse Authorities - IALA topmarks (lateral). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.222, November 2000).

1) Cone, point up

IHO Definition: *Is where the vertex points up. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.222, November 2000).*

2000).

2) **Cone, point down**

IHO Definition: Is where the vertex points down. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.222, November 2000).

3) **Sphere**

IHO Definition: A body the surface of which is at all points equidistant from the centre. (The New Shorter Oxford English Dictionary, 1993, vol 2).

Spheres are commonly used as International Association of Lighthouse Authorities - IALA topmarks (safe water). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

4) **2 spheres**

IHO Definition: Two black spheres, one above the other. Two spheres are commonly used as an International Association of Lighthouse Authorities - IALA topmark (isolated danger). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

5) **Cylinder (can)**

IHO Definition: A solid geometrical figure generated by straight lines fixed in direction and describing with one of point a closed curve, especially a circle (in which case the figure is circular cylinder, its ends being parallel circles). (The New Shorter Oxford English Dictionary, 1993, vol 2).

Cylinders are commonly used as International Association of Lighthouse Authorities - IALA topmarks (lateral). (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

6) **Board**

IHO Definition: Usually of rectangular shape, made from timber or metal and used to provide a contrast with the natural background of a daymark. The actual daymark is often painted on to this board. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

7) **X-shaped (St. Andrew's cross)**

IHO Definition: Having a shape or a cross-section like the capital letter X. (The New Shorter Oxford English Dictionary, 1993, vol 2).

An x-shape as an International Association of Lighthouse Authorities – IALA topmark should be 3 dimensional in shape. It is made of at least three crossed bars. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

8) **Upright cross (St George's cross)**

IHO Definition: A cross with one vertical member and one horizontal member, i.e. similar in shape to the character "+". (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

9) **Cube, point up**

IHO Definition: A cube is a solid contained by six equal squares; a regular hexahedron (The New Shorter Oxford English Dictionary, 1993, vol 2).

A cube, point up, is a cube standing on one of its vertexes.

10) **2 cones, point to point**

IHO Definition: 2 cones, one above the other, with their vertices together in the centre. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

11) **2 cones, base to base**

IHO Definition: 2 cones, one above the other, with their bases together in the centre and their vertices pointing up and down. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

12) **Rhombus (diamond)**

IHO Definition: A plane figure having four equal sides and equal opposite angles (two acute and two obtuse); an

oblique equilateral parallelogram. (The New Shorter Oxford English Dictionary, 1993, vol 2).

13) **2 cones (points upward)**

IHO Definition: 2 cones, one above the other, with their vertices pointing up.

14) **2 cones (points downward)**

IHO Definition: 2 cones, one above the other, with their vertices pointing down.

15) **Besom, point up (broom or perch)**

IHO Definition: A bundle of rods or twigs. (The New Shorter Oxford English Dictionary, 1993, vol 2). A perch is a staff placed on top of a buoy, rock or shoal as a mark for navigation. (IHO Dictionary – S-32).

A besom, point up is where the thicker (untied) end of the besom is at the top.

16) **Besom, point down (broom or perch)**

IHO Definition: A bundle of rods or twigs. (The New Shorter Oxford English Dictionary, 1993, vol 2). A perch is a staff placed on top of a buoy, rock or shoal as a mark for navigation. (IHO Dictionary – S-32).

A besom, point down is where the thinner (tied) end of the besom is at the top.

17) **Flag**

IHO Definition: A flag mounted on a short pole. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

18) **Sphere over rhombus**

IHO Definition: A sphere located above a rhombus. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.223, November 2000).

19) **Square**

IHO Definition: A plane figure with four right angles and four equal straight sides (The New Shorter Oxford English Dictionary, 1993, vol 2).

20) **Rectangle, horizontal**

IHO Definition: A rectangle is a plane figure with four right angles and four straight sides, opposite sides being parallel and equal in length (The New Shorter Oxford English Dictionary, 1993, vol 2).

A horizontal rectangle is where the two longer opposite sides are standing horizontally.

21) **Rectangle, vertical**

IHO Definition: A rectangle is a plane figure with four right angles and four straight sides, opposite sides being parallel and equal in length (The New Shorter Oxford English Dictionary, 1993, vol 2).

A vertical rectangle is where the two longer opposite sides are standing vertically.

22) **Trapezium, up**

IHO Definition: A trapezium is a quadrilateral having one pair of opposite sides parallel. (The New Shorter Oxford English Dictionary, 1993, vol 2).

A trapezium, up is a trapezium which stands on its longer parallel side. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.224, November 2000).

23) **Trapezium, down**

IHO Definition: A trapezium is a quadrilateral having one pair of opposite sides parallel. (The New Shorter Oxford English Dictionary, 1993, vol 2).

A trapezium, down is a trapezium which stands on its shorter parallel side. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.224, November 2000).

24) **Triangle, point up**

IHO Definition: A triangle is a figure having three angles and three sides. (New Shorter Oxford English Dictionary,

1993, vol 2).

A triangle, point up is a triangle which has a vertex at the top.

25) **Triangle, point down**

IHO Definition: A triangle is a figure having three angles and three sides. (New Shorter Oxford English Dictionary, 1993, vol 2).

A triangle, point down is a triangle which has a side at the top.

26) **Circle**

IHO Definition: A perfectly round plane figure whose circumference is everywhere equidistant from its centre. (The New Shorter Oxford English Dictionary, 1993, vol 1).

27) **Two upright crosses (one over the other)**

IHO Definition: Two upright crosses, generally vertically disposed one above the other. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.224, November 2000).

28) **T-shape**

IHO Definition: Having a shape like the capital letter T. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.224, November 2000).

29) **Triangle pointing up over a circle**

IHO Definition: A triangle, vertex uppermost, located above a circle. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.224, November 2000).

30) **Upright cross over a circle**

IHO Definition: An upright cross located above a circle. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.224, November 2000).

31) **Rhombus over circle**

IHO Definition: A rhombus located above a circle. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.224, November 2000).

32) **Circle over a triangle pointing up**

IHO Definition: A circle located over a triangle, vertex uppermost. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.224, November 2000).

22.144 Traffic flow (TRAFIC)

Traffic flow: IHO Definition:

1) **Inbound**

IHO Definition: Traffic flow in a general direction toward a port or similar destination. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.225, November 2000).

2) **Outbound**

IHO Definition: Traffic flow in a general direction away from a port or similar point of origin. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.225, November 2000).

3) **One-way**

IHO Definition: Traffic flow in one general direction only. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.225, November 2000).

4) **Two-way**

IHO Definition: Traffic flow in two generally opposite directions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page

2.225, November 2000).

22.145 Value of annual change in magnetic variation (VALACM)

Value of annual change in magnetic variation: IHO Definition: The annual change in magnetic variation values. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.226, November 2000).

Unit: minute (′), negative west

Resolution: 0.1′

Format: sxx.x

s: sign, negative values only

Example: -7.1 for an annual change of 7·1′ in a westerly direction

Remarks:

- A positive value, i.e. unsigned, indicates a change in an easterly direction and a negative value indicates a change in a westerly direction.

22.146 Value of depth contour (VALDCO)

Value of depth contour: IHO Definition: The depth of a sea bottom contour. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.227, November 2000).

Unit: Defined in the DUNI subfield of the DSPM record or the DUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0.1m

Format: sxxxxx.x

s: sign, negative values only

Example: 50 for a depth contour of 50 metres

Remarks:

- Drying contours are indicated by a negative value.

22.147 Value of local magnetic anomaly (VALLMA)

Value of local magnetic anomaly: IHO Definition: The value of the deviation from the normal magnetic variation. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.228, November 2000).

Unit: minute (′)

Resolution: 0.1′

Format: xxx.x

Example: 180.3 for a deviation of $\pm 3^{\circ} 00.3$

Remarks:

- The deviation is assumed to be positive and negative. The plus/minus character **must** not be encoded.

Comment [j273]: MD8 – 7.Co.21

22.148 Value of magnetic variation (VALMAG)

Value of magnetic variation: IHO Definition: The magnetic variation value. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.229, November 2000).

Unit: degree (°), negative west

Resolution: 0.01°

Format: sxx.xx

s: sign, negative values only

Example: 2.3 for a magnetic north oriented at 2° 18' east from the geographic (true) north

Remarks:

- A positive value, i.e. unsigned, indicates a change in an easterly direction and a negative value indicates a change in a westerly direction.

22.149 Value of maximum range (VALMXR)

Value of maximum range: **IHO Definition:** The extreme distance at which an object can be seen or a signal detected. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.230, November 2000).

Unit: Nautical mile (M)

Resolution: 0.1M

Format: xx.x

Example: 17 for maximum range of 17 nautical miles

Remarks:

- This attribute does not apply to lights, where the attribute “value of nominal range” should be used.

22.150 Value of nominal range (VALNMR)

Value of nominal range: **IHO Definition:** The nominal range at which an object can be seen or a signal detected. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.231, November 2000).

Unit: Nautical mile (M)

Resolution: 0.1M

Format: xx.x

Example: 14 for a nominal range of 14 nautical miles

Remarks:

- The nominal range is normally the luminous range of a light in a homogeneous atmosphere in which the meteorological visibility is 10 sea miles. (IHO Dictionary – S-32).

22.151 Value of sounding (VALSOU)

Value of sounding: **IHO Definition:** The value of the measurement of a sounding relative to the chart datum. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.232, November 2000).

Unit: Defined in the DUNI subfield of the DSPM record or the DUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0.1m

Format: sxxxxx.x

s: sign, negative values only

Examples: 18.2 for a sounding of 18.2 metres

-2.4 for a drying height of 2.4 metres

Remarks:

- A drying height is indicated by a negative value.

22.152 Vertical clearance (VERCLR)

Vertical clearance: IHO Definition: The vertical clearance measured from the horizontal plane towards the object overhead. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.234, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0.1m

Format: xx.x

Example: 7.6 for a vertical clearance of 7.6 metres

Remarks:

- In the case of cables carrying high voltages an additional clearance of from 2 to 5 metres may be needed to avoid an electrical discharge. When known, the authorised safe clearance (known in the UK as the Safe Overhead Clearance) which is the physical clearance minus a safety margin shall be stated, using the attribute VERCSA. VERCLR must not be used to populate authorized safe clearances.

22.153 Vertical clearance, closed (VERCCL)

Vertical clearance, closed: IHO Definition: The vertical clearance of an object in closed condition (e.g. a closed lifting bridge) measured from the horizontal plane towards the object overhead. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.235, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0.1m

Format: xx.x

Example: 11.2 for a vertical clearance of 11.2 metres

22.154 Vertical clearance, open (VERCOP)

Vertical clearance, open: IHO Definition: The vertical clearance of an object in opened condition (e.g. an opened lifting bridge) measured from the horizontal plane towards the object overhead. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.236, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0.1

Format: xx.x

Example: 17.8 for a vertical clearance of 17.8 metres

22.155 Vertical clearance, safe (VERCSA)

Vertical clearance, safe: IHO Definition: The safe vertical clearance measured from the horizontal plane towards the object overhead. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.237, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0.1m

Format: xx.x

Example: 7.2 for a vertical clearance of 7.2 metres

Remarks:

- In the case of cables carrying high voltages, the quoted vertical clearance (VERCLR) may have to be reduced by 2.5m to avoid electrical discharge. When known, this authorized safe clearance (known in the UK as the Safe Overhead Clearance) which is the physical clearance minus a safety margin **must** be stated, using **VERCSA**.

22.156 Vertical datum (VERDAT)

Vertical datum: IHO Definition:

1) **Mean low water springs**

IHO Definition: (MLWS) - the average height of the low waters of spring tides. Also called spring low water. ([IHO Dictionary – S-32](#)).

2) **Mean lower low water springs**

IHO Definition: (MLLWS) - the average height of lower low water springs at a place. ([IHO Dictionary – S-32](#)).

3) **Mean sea level**

IHO Definition: (MSL) - the average height of the surface of the sea at a tide station for all stages of the tide over a 19-year period, usually determined from hourly height readings measured from a fixed predetermined reference level. ([IHO Dictionary – S-32](#)).

4) **Lowest low water**

IHO Definition: An arbitrary level conforming to the lowest tide observed at a place, or somewhat lower. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.239, November 2000).

5) **Mean low water**

IHO Definition: (MLW) - the average height of all low waters at a place over a 19-year period. ([IHO Dictionary – S-32](#)).

6) **Lowest low water springs**

IHO Definition: An arbitrary level conforming to the lowest water level observed at a place at spring tides during a period of time shorter than 19 years. (Hydrographic Service, Royal Australian Navy).

7) **Approximate mean low water springs**

IHO Definition: An arbitrary level, usually within $\pm 0.3\text{m}$ from that of mean low water springs (MLWS). (Hydrographic Service, Royal Australian Navy).

8) **Indian spring low water**

IHO Definition: (ISLW) - an arbitrary tidal datum approximating the level of the mean of the lower low water at spring tides. Also called Indian tidal plane. ([IHO Dictionary – S-32](#)).

A tidal datum approximating the lowest water level observed at a place, originated by G.H. Darwin for the tides of India at a level below MSL being equal to the sum of amplitudes of the harmonic constituents M2, S2, K1 and O1; usually below that of the lower low water at spring tides. Also called Indian tide plane. (Hydrographic Service, Royal Australian Navy).

9) **Low water springs**

IHO Definition: An arbitrary level, approximating that of mean low water springs (MLWS). (Hydrographic Service, Royal Australian Navy).

10) **Approximate lowest astronomical tide**

IHO Definition: An arbitrary level, usually within $\pm 0.3\text{m}$ from that of lowest astronomical tide (LAT). (Hydrographic Service, Royal Australian Navy).

11) **Nearly lowest low water**

IHO Definition: An arbitrary level approximating the lowest water level observed at a place, usually equivalent to the Indian spring low water (ISLW). (Hydrographic Service, Royal Australian Navy).

12) **Mean lower low water**

IHO Definition: (MLLW) - the average height of the lower low waters at a place over a 19-year period. (IHO Dictionary – S-32).

13) **Low water**

IHO Definition: An approximation of mean low water adopted as the reference level for a limited area, irrespective of better determinations at a later date. Used mostly in harbour and river engineering. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.239, November 2000).

Used in inland (non-tidal) waters. It is generally defined as a level which the daily mean water level would fall below less than 5% of the time and by no more than 0.2 metres during the navigation season. A single level surface is usually chosen as the low water datum for a whole lake. On a river, low water datum is a sloping surface which approximates the river surface at a low state. (Canadian Hydrographic Service)

14) **Approximate mean low water**

IHO Definition: An arbitrary level, usually within $\pm 0.3\text{m}$ from that of mean low water (MLW). (Hydrographic Service, Royal Australian Navy).

15) **Approximate mean lower low water**

IHO Definition: An arbitrary level, usually within $\pm 0.3\text{m}$ from that of mean lower low water (MLLW). (Hydrographic Service, Royal Australian Navy).

16) **Mean high water**

IHO Definition: (MHW) - The average height of all high waters at a place over a 19-year period. (IHO Dictionary, S-32).

17) **Mean high water springs**

IHO Definition: (MHWS) - The average height of the high waters of spring tides. Also called spring high water. (IHO Dictionary, S-32).

18) **High water**

IHO Definition: The highest level reached at a place by the water surface in one tidal cycle. Also called high tide. (IHO Dictionary, S-32).

19) **Approximate mean sea level**

IHO Definition: An arbitrary level, usually within $\pm 0.3\text{m}$ from that of mean sea level (MSL). (Hydrographic Service, Royal Australian Navy).

20) **High water springs**

IHO Definition: An arbitrary level, approximating that of mean high water springs (MHWS). (Hydrographic Service, Royal Australian Navy).

21) **Mean higher high water**

IHO Definition: (MHHW) - The average height of higher high waters at a place over a 19-year period. (IHO Dictionary, S-32).

22) **Equinoctial spring low water**

IHO Definition: The level of low water springs near the time of an equinox. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.240, November 2000).

23) Lowest astronomical tide

IHO Definition: (LAT) - the lowest tide level which can be predicted to occur under average meteorological conditions and under any combination of astronomical conditions. (IHO Dictionary – S-32).

24) Local datum

IHO Definition: An arbitrary datum defined by a local harbour authority, from which levels and tidal heights are measured by this authority. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.240, November 2000).

25) International Great Lakes Datum 1985

IHO Definition: (IGLD 1985) - A vertical reference system with its zero based on the mean water level at Rimouski/Pointe-au-Père, Quebec, over the period 1970 to 1988. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.240, November 2000).

26) Mean water level

IHO Definition: The average of all hourly water levels over the available period of record. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.240, November 2000).

27) Lower low water large tide

IHO Definition: (LLWLT) - The average of the lowest low waters, one from each of 19 years of observations. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.240, November 2000).

28) Higher high water large tide

IHO Definition: (HHWLT) - The average of the highest high waters, one from each of 19 years of observations. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.240, November 2000).

29) Nearly highest high water

IHO Definition: An arbitrary level approximating the highest water level observed at a place, usually equivalent to the high water springs. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.240, November 2000).

30) Highest astronomical tide (HAT)

IHO Definition: The highest tidal level which can be predicted to occur under average meteorological conditions and under any combination of astronomical conditions. (IHO Dictionary, S-32).

Remarks:

- This attribute is used to specify the datum to which both heights (**vertical datum**) and soundings (**sounding datum**) are referred.
- When the vertical datum is unknown, such as water areas above locks, the value “local datum” **should** be used, and further details may be encoded using the attribute “INFORM” (**see clause X.X**).
- The ± 0.3m approximation quoted in the “approximate” levels is somehow arbitrary and follows the British example of their definition for “approximate LAT”.

22.157 Vertical length (VERLEN)

Vertical length: **IHO Definition:** The total vertical length of an object. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.242, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0.1m

Format: xxx.x

Example: 24.5 for a vertical length of 24.5 metres

Remarks:

- For floating **features**: The vertical distance from the surface of water to the highest point of that **feature**.
- For fixed **features**: The vertical distance from seabed or ground to the highest point of that **feature**.

- For **features** on top of other **features**: the vertical distance from the lowest to the highest point of that **feature**.
- Vertical length measurements do not require a datum.

22.158 Water level effect (WATLEV)

Water level effect: IHO Definition:

1) **Partly submerged at high water**

IHO Definition: Partially covered and partially dry at high water. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.243, November 2000).

2) **Always dry**

IHO Definition: Not covered at high water under average meteorological conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.243, November 2000).

3) **Always under water / submerged**

IHO Definition: Remains covered by water at all times under average meteorological conditions. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.243, November 2000).

4) **Covers and uncovers**

IHO Definition: Expression intended to indicate an area of a reef or other projection from the bottom of a body of water which periodically extends above and is submerged below the surface. Also referred to as dries or uncovers. (IHO Dictionary – S-32).

5) **Awash**

IHO Definition: Flush with, or washed by the waves at low water under average meteorological conditions. (Adapted from IHO Dictionary – S-32).

6) **Subject to inundation or flooding**

IHO Definition: An area periodically covered by flood water, excluding tidal waters. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

7) **Floating**

IHO Definition: Resting or moving on the surface of a liquid without sinking (Concise Oxford Dictionary).

Remarks:

- The attribute “water level effect” encodes the effect of the surrounding water on an object.

		1000	± 2.0		
D	worse than ZOC C	Worse Than ZOC C		Full area search not achieved, large depth anomalies may be expected.	Poor quality data or data that cannot be quality assessed due to lack of information.
U	Unassessed - The quality of the bathymetric data has yet to be assessed				

Remarks:

To decide on a ZOC Category, all conditions outlined in columns 2 to 4 of the table must be met.

Explanatory notes quoted in the table:

- 1 The allocation of a ZOC indicates that particular data meets minimum criteria for position and depth accuracy and seafloor coverage defined in this Table. ZOC categories reflect a charting standard and not just a hydrographic survey standard. Depth and position accuracies specified for each ZOC category refer to the errors of the final depicted soundings and include not only survey errors but also other errors introduced in the chart production process. Data may be further qualified by Object Class 'Quality of Data' (M_QUAL) sub-attributes as follows:
 - a) Positional Accuracy (POSACC) and Sounding Accuracy (SOUACC) may be used to indicate that a higher position or depth accuracy has been achieved than defined in this Table (e.g. a survey where full seafloor coverage was not achieved could not be classified higher than ZOC B; however, if the position accuracy was, for instance, ± 15 metres, the sub-attribute POSACC could be used to indicate this).
 - b) Swept areas where the clearance depth is accurately known but the actual seabed depth is not accurately known may be accorded a 'higher' ZOC (i.e. A1 or A2) providing positional and depth accuracies of the swept depth meets the criteria in this Table. In this instance, Depth Range Value 1 (DRVAL1) may be used to specify the swept depth. The position accuracy criteria apply to the boundaries of swept areas.
 - c) SURSTA, SUREND and TECSOU may be used to indicate the start and end dates of the survey and the technique of sounding measurement.
- 2 Position Accuracy of depicted soundings at 95% CI (2.45 sigma) with respect to the given datum. It is the cumulative error and includes survey, transformation and digitizing errors etc. Position accuracy need not be rigorously computed for ZOCs B, C and D but may be estimated based on type of equipment, calibration regime, historical accuracy etc.
- 3 Depth accuracy of depicted soundings = $a + (b-d)/100$ at 95% CI (2.00 sigma), where d = depth in metres at the critical depth. Depth accuracy need not be rigorously computed for ZOCs B, C and D but may be estimated based on type of equipment, calibration regime, historical accuracy etc.
- 4 Significant seafloor features are defined as those rising above depicted depths by more than:

	Depth	Significant Feature
a.	<40 m	2 m
b.	>40 m	10% depth

A full seafloor search indicates that a systematic survey was conducted using detection systems, depth measurement systems, procedures, and trained personnel designed to detect and measure depths on significant seafloor features. Significant features are included on the chart as scale allows. It is impossible to guarantee that no significant feature could remain undetected, and significant features may have become present in the area since the time of the survey.
- 5 Typical Survey Characteristics - These descriptions should be seen as indicative examples only.
- 6 Controlled, systematic surveys (ZOC A1, A2 and B) - surveys comprising planned survey lines, on a geodetic datum that can be transformed to WGS 84.
- 7 Modern survey echosounder - a high precision single beam depth measuring equipment, generally including all survey echosounders designed post 1970.

Comment [j274]: S-57 Supplement No. 2

23.3 Compilation scale of data (CSCALE)

Compilation scale: IHO Definition: The scale at which the data was originally compiled. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.117, November 2000).

Indication: The modulus of the scale is indicated, that is 1:75 000 is encoded as 75000.

Unit: none

Resolution: 1

Minimum value: 1

Format: xxxxxxxx

Example: **75000** for a scale of 1:75000

Remarks:

- For example, the scale of the paper chart that was used for the ENC compilation. This attribute is only used in conjunction with the meta **feature** "Compilation Scale of data" (**M_CSCL**) which is used to define polygons of equal compilation scale. CSCALE should therefore not be confused with the attributes SCAMIN and SCAMAX.

23.4 Horizontal accuracy (HORACC)

Horizontal accuracy: IHO Definition: The best estimate of the horizontal accuracy of horizontal clearance and distances. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.136, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m)

Resolution: 0.1m

Format: xx.x

Example: **0.5** for an error of 0.5 metres.

Remarks:

- The expected input is the radius of the two-dimensional error.
- The error is assumed to be positive and negative. The plus/minus character **must** not be encoded.

23.5 Horizontal datum (HORDAT)

Horizontal datum: IHO Definition:

- 1) **WGS 72**
- 2) **WGS 84**
- 3) **European 1950**
- 4) **Potsdam Datum**
- 5) **Adindan**
- 6) **Afgooye**
- 7) **Ain al Abd 1970**
- 8) **Anna 1 Astro 1965**
- 9) **Antigua island Astro 1943**
- 10) **Arc 1950**

- 11) **Arc 1960**
- 12) **Ascension Island 1958**
- 13) **Astro beacon "E" 1945**
- 14) **Astro DOS 71/4**
- 15) **Astro Tern Island (FRIG) 1961**
- 16) **Astronomical Station 1952**
- 17) **Australian Geodetic 1966**
- 18) **Australian Geodetic 1984**
- 19) **Ayabelle Lighthouse**

- 128) **BJZ54 (A954 Beijing Coordinates)**
- 129) **Modified BJZ54**
- 130) **GDZ80**
- 131) **Local Datum**

Remarks:

- The attribute HORDAT is only permitted for the **meta feature M_HOPA**.
- All necessary information for conversion of geographic coordinates from most of the Geodetic Datums in the above list to WGS-84 is contained in the "User's Handbook on Datum Transformations involving WGS-84", prepared by the US Defense Mapping Agency and which is available from the IHB as IHO Publication S-60 (English and French Versions), along with an associated standard datum transformation software **on floppy disk** called "MADTRAN". The resulting latitude and longitude offsets can be encoded in the attribute SHIPAM.

23.6 Positional accuracy (POSACC)

Positional accuracy: IHO Definition: The best estimate of the accuracy of a position. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.255, November 2000).

Unit: Defined in the PUNI subfield of the DSPM record, e.g. metre (m)

Resolution: 0.1m or 0.1mm

Format: xxxx.x

Example: 25 for an error of 25 metres

23.7 Quality of position (QUAPOS)

Quality of position: IHO Definition:

132) Surveyed

IHO Definition: The position(s) was(were) determined by the operation of making measurements for determining the relative position of points on, above or beneath the earth's surface. Survey implies a regular, controlled survey of any date. (Adapted from IHO Dictionary – S-32, & IHO Chart Specifications, M-4, 175.2).

133) Unsurveyed

IHO Definition: Survey data is does not exist or is very poor. (Adapted from IHO Dictionary – S-32).

134) Inadequately surveyed

IHO Definition: Position data is of a very poor quality. (Adapted from IHO Dictionary – S-32).

135) Approximate

IHO Definition: A position that is considered to be less than third-order accuracy, but is generally considered to be within 30-5 metres of its correct geographic location. Also may apply to a feature whose position does not remain fixed. (Adapted from IHO Dictionary – S-32, & IHO Specifications, M-4, 424.1).

136) Position doubtful

IHO Definition: A feature whose position has been reported but which is considered to be doubtful. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.256, November 2000).

137) Unreliable

IHO Definition: A feature's position obtained from questionable or unreliable data. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.256, November 2000).

138) Reported (not surveyed)

IHO Definition: A feature whose position has been reported and its position confirmed by some means other than a formal survey such as an independent report of the same feature.. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.256, November 2000).

139) Reported (not confirmed)

IHO Definition: A feature whose position has been reported and its position has not been confirmed. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.256, November 2000).

140) Estimated

IHO Definition: The most probable position of a feature determined from incomplete data or data of questionable accuracy. (Adapted from IHO Dictionary – S-32).

141) Precisely known

IHO Definition: A position that is of a known value, such as the position of an anchor berth or other defined feature..(S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.257, November 2000).

142) Calculated

IHO Definition: A position that is computed from data. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.257, November 2000).

23.8 Scale value one (SCVAL1)

Scale value one: **IHO Definition:** The largest scale for the range of survey scale as used in source diagram information. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.182, November 2000).

Indication: The modulus of the scale is indicated, that is 1:25 000 is encoded as 25000.

Unit: none

Resolution: 1

Minimum value: 1

Format: xxxxxxxx

Example: 25000 for a scale of 1:25000

23.9 Scale value two (SCVAL2)

Scale value two: **IHO Definition:** The smallest scale for the range of survey scale as used in source diagram information. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.183, November 2000).

Indication: The modulus of the scale is indicated, that is 1:250 000 is encoded as 250000.

Unit: none

Resolution: 1

Minimum value: 1

Format: xxxxxxxx

Example: **250000** for a scale of 1:250000

23.10 Shift parameters (SHIPAM)

Shift parameters: **IHO Definition:** Latitude and longitude offsets required to shift a position from one geodetic datum to another. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.186, November 2000).

Indication:

Latitude: Shift parameter in latitude from the specified horizontal datum to the horizontal datum of the data.

Unit: minutes ('), negative south.

Resolution: 0.001 minute.

Longitude: Shift parameter in longitude from the specified horizontal datum to the horizontal datum of the data.

Unit: minutes ('), negative west.

Resolution: 0.001 minute.

Format:

sxx.xxx, syy.yyy

sxx.xxx: lat

syy.yyy: lon

s: sign, negative values only.

Example:

-0.03,0.07 in the following case:

Position on specified datum: 20°40'36 (N) 085°20'05 (E)

Shift parameters (-0.03,0.07): -0.03 (S) 0.07 (E)

Position on datum of data: 20°40'33 (N) : 085°20'12 (E)

Remarks:

- All necessary information for conversion of geographic coordinates from most of the Geodetic Datums in the above list to WGS-84 is contained in the "User's Handbook on Datum Transformations involving WGS-84", prepared by the US Defence Mapping Agency and which is available from the IHB as IHO Publication S-60 (English and French Versions), along with an associated standard datum transformation software on floppy disk called "MADTRAN". The resulting latitude and longitude offsets can be encoded in the attribute SHIPAM.
- Additional information on the transformation as indicated in IHO Publication S-60, e.g. TOY-M (Mean Solution), TOY-A (Japan), TOY-B (South Korea) or TOY-C (Okinawa) in relation to Tokyo Datum, may be encoded in the attribute INFORM or NINFORM.

23.11 Sounding accuracy (SOUACC)

Sounding accuracy: **IHO Definition:** The best estimate of the accuracy of a sounding.

Unit: Defined in the DUNI subfield of the DSPM record or the DUNITS attribute of the M_UNIT meta feature: metre (m).

Resolution: 0.1m

Format: xx.x

Example: 25 for an error of 25 metres

Remarks:

- The maximum of the one-dimensional error. The error is assumed to be positive and negative. The plus/minus character **must** not be encoded.

23.12 Sounding distance - maximum (SDISMX)

Sounding distance - maximum: **IHO Definition:** The maximum spacing of the principal sounding lines of a survey. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.193, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m).

Resolution: 1m

Format: xxxx

Example: 150 for a maximum spacing of 150 metres

23.13 Sounding distance - minimum (SDISMN)

Sounding distance - minimum: **IHO Definition:** The minimum spacing of the principal sounding lines of a survey. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.194, November 2000).

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m).

Resolution: 1m

Format: xxxx

Example: 50 for a maximum spacing of 50 metres

23.14 Source date (SORDAT)

Source date: **IHO Definition:** The production date of the source, e.g. the date of measurement.

Indication: The source should be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) and 2 digits for the day (DD). **When no specific month and/or day is required/known, indication of the month and/or the day is omitted. This conforms to ISO 8601: 1988.**

Format: CCYYMMDD (full date, mandatory)
 CCYYMM (no specific day required – mandatory)
 CCYY (no specific month required – mandatory)

Example: 19820506 for 6 May 1982 as source date.

Comment [j275]: MD8 – 4.Cl.10 and 4.Co.12

Comment [j276]: MD8 – 4.Cl.10 and 4.Co.12

23.15 Source indication (SORIND)

Source indication **IHO Definition:** Information about the source of the feature.

Indication:

Country (c2): **(mandatory):** Two letter code from ISO 3166 (refer to S-62)

Authority (c2): **(mandatory):** A string of two alphanumeric characters (refer to S-62), e.g. German Bundesamt für

Seeschifffahrt und Hydrographie = DE; US National Imagery and Mapping Agency = U1.

Source (c5): Graphic e.g. plotting sheet, paper chart = graph
Report e.g. wreck report = rept

ID-Code (c...): e.g. Code of paper chart

Format: **c2,c2,c5,c...**

Example: **DK,D1,graph,chart196**

23.16 Survey authority (SURATH)

Survey authority: IHO Definition: The authority which was responsible for the survey. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.200, November 2000).

Example:

**Hydrographic Service, Royal Australian Navy
Port of Melbourne Authority**

Remarks:

- The attribute “survey authority” encodes the name of the source survey authority.

23.17 Survey date - end (SUREND)

Survey date - end: IHO Definition: The end date of the survey. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.201, November 2000).

Indication: The “survey date, end” should be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) (e.g. April = 04) and 2 digits for the day (DD). When no specific month and/or day is required/known, indication of the month and/or the day is omitted. This conforms to ISO 8601: 1988.

Format: CCYYMMDD (full date, **mandatory**)
CCYYMM (no specific day required – **mandatory**)
CCYY (no specific month required – **mandatory**)

Example: **19781127** for a survey ending on 27 November 1978.

23.18 Survey date - start (SURSTA)

Survey date - start: IHO Definition: The start date of the survey. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.202, November 2000).

Indication: The “survey date, end” should be encoded using 4 digits for the calendar year (CCYY), 2 digits for the month (MM) (e.g. April = 04) and 2 digits for the day (DD). When no specific month and/or day is required/known, indication of the month and/or the day is omitted. This conforms to ISO 8601: 1988.

Format: CCYYMMDD (full date, **mandatory**)
CCYYMM (no specific day required – **mandatory**)
CCYY (no specific month required – **mandatory**)

Example: **198403** for a survey starting in March 1984.

23.19 Survey type (SURTYP)

Survey type: IHO Definition:

1) **Reconnaissance/sketch survey**

IHO Definition: A survey made to a lower degree of accuracy and detail than the chosen scale would normally indicate. (IHO Dictionary – S-32).

2) **Controlled survey**

IHO Definition: A thorough survey usually conducted with reference to guidelines. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.203, November 2000).

4) **Examination survey**

IHO Definition: A survey principally aimed at the investigation of underwater obstructions and dangers. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.203, November 2000).

5) **Passage survey**

IHO Definition: A survey where soundings are acquired by vessels on passage. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.203, November 2000).

6) **Remotely sensed**

IHO Definition: a survey where features have been positioned and delimited using remote sensing techniques. (S-57, Appendix A – Chapter 2, Edition 3.1, Page 2.203, November 2000).

23.20 Vertical accuracy (VERACC)

Sounding accuracy: IHO Definition: The best estimate of the vertical accuracy of heights, vertical distances and vertical clearances, excluding sounding measurements.

Unit: Defined in the HUNI subfield of the DSPM record or the HUNITS attribute of the M_UNIT meta feature: metre (m).

Resolution: 0-1m

Format: xx.x

Example: 1.2 for an error of 1-2 metres

Remarks:

- The maximum of the one-dimensional error. The error is assumed to be positive and negative. The plus/minus character **must** not be encoded.
