

Icelandic INT-chart Production

Iceland has finished publishing all the INT charts on its responsibility in Region D (NE-Atlantic Ocean) except chart INT 112. This process has taken much more time than expected but the main reason for this is that all the old data had to be digitized and transformed from Hjørsey Datum to WGS84 and the charts recompiled.

1118	530	2003	65°00'	10,000	472 x 572
All charts are referred to WGS 84.					

The new edition of INT 112 is estimated to be published 2009.

It is expected that publication of all Icelandic INT charts will be finished before the end of 2010. Today, 19 charts out of 64 have already been published as ENC's. The 64 Icelandic charts consist of 38 harbor and approach charts (7 in full size¹, 5 in ½ size and 26 in size A3), 19 coastal charts and 7 transit charts. The main emphasis is on transforming INT charts to ENC.
