Subject:	S124 CG - ideas of solutions for shipboard user
Date:	mercredi 17 décembre 2014 11:17:26
Attachments:	Shipboard detailed scenario related to Navtex NW V1.pdf ideas of solutions for shipboard user - questionnaire.doc

---

Dear all,

Following my e-mail dated 27/10/2014, NO reviewed the Shipboard detailed scenario related to Navtex NW with no remark. No other comment has been received about it. Only editorial corrections have been made and the result is the joined Shipboard detailed scenario related to Navtex NW - V1.

FR analysed the part “Coastal via NAVTEX” of WWNWS survey* and summarized the problems raised by users. We also added other problems that we know.

The Shipboard detailed scenario related to Navtex NW allows a better understanding of the problems and of their origin and, thus, a better understanding of the needs and gaps from the IMO background**.

I suggest working now on solutions to reduce the load for the user. The purpose is to set up requirements on digital information (information to be contained in S-124 NW with the objective to review and refine our initial UML model; other related information in systems) through the design of possible new functions performed by systems within new scenarios. These scenarios and functions will be our contribution to future draft performance standards for systems using S-124 NW. It is suggested starting on shipboard side.

FR has drafted some ideas of solutions to kick off the collective thinking of the CG.

These ideas are submitted to your consideration via the attached questionnaire in which you are requested to express all your views and ideas. The goal is to gather your thoughts in order to consider the subjects on which we will have to work. The identification of user’s problems is also submitted to your views.

Please, reply by 27th February 2015.

I will be relying on your active participation.

Season’s Greetings,

Yves
