Inventory of Tide Gauges used by IHO Member States

The attachment shows the latest edition of the Inventory (March 2011) which now contains entries for some 30 States.

Algeria	Long Term (National Network)	3 Analogue gauges type A- OTT-R16	Operated by the Hydrographic Service of the Algerian Navy. Float gauges recording to paper. Digital gauges not yet installed and there is no real time data transmission.
Antarctica	Casey, Davi and Mawson Stations	Pressure	600-kg concrete moorings containing gauges in areas relatively free of icebergs have operated for eight years at Mawson and Davis and at Casey for five. A new shore gauge at Mawson will use an inclined borshole to the sec. heated to stop the water from freezing
(Australia)	Macquarie Island	Acoustic and Pressure	Access to the sea was gained via an inclined bore hole, with the gauge and electronics in a sealed fibre glass dome at the top of the hole
	Long Term (National Network)	SEAFRAME Electromagnetic Tide Pole, Acoustic, Float, Pressure,	Operated by Bureau of Meteorology, Australia. Please see <u>www.icsm.gov.au</u> publication "Australian Tides Manual"
Australia	State Operated-	Bubbler, Radar (in most cases Vegapuls), Gas purge, Radar with Shaft encoder	For details of which type deployed where. As most of the permanent gauges are installed by other Agencies details can be sought.
	Short Term (AHS)	InterOcean S4 Pressure gauge Or RBR TGR-1050	Bottom mounted and usually installed with a tide staff
Bahrain Kingdom of	 Mina'Salman at HSD Jetty (BTN) network connected to web base & web hosted by Echo Net YSI - USA Khalifa Bin Salman Port – Tug Boats Jetty (BTN) network connected to web base & web hosted by Echo Net YSI - USA Amwaj Islands – Amwaj Marina Jetty (BTN) network connected to web base & web hosted by Echo Net YSI - USA 	Pressure	Accessed by the following web site www.ysieconet.com for downloading and managing users access. The tide gauge device is bottom mounted measuring at national chart datum level with above water solar powered data loggers and transmitting antenna.

Brazil	Long-term stations and one year ports stations	Kalesto OTT – radar sensor RLS OTT Impulse radar sensor	Sensor without pipe well
		SE 200 OTT – float-operated shaft encoder	Well pipe with 200 mm diameter and 4 orifices of 2mm
	Short-term (hydrography)	Thalimedes stand alone - float shaft Encoder - OTT	Well pipe with 200 mm diameter and 4 orifices of 2mm
		Analogic float gauge	Well pipe with 200 mm/300mm diameter and 2/4 orifices of 2mm
		17 stations with satellite transmission data capabilities. Vaisala 555C DCP Differential Pressure Transducer (vented) DRUCK PTX 1830	Usually submerged sea level sensor housed inside PVC Hydraulic 50 mm and installed with tide staff. Deploy depending of the pier characteristics. Please see Chile National presentation at TWLWG1 http://www.iho.int/mtg_docs/com_wg/IHOTC/TWLWG1/Chile.pdf
Chile	Long-term (National Network)	The above platforms and sensors are being replaced by: - Vaisala MAWS110 DCP - Differential Pressure Transducer (vented) Keller PR-36XW/H with hastelloy diaphragm for sea level applications - Radar water level Sensor VEGA QHR102 3 self-contained platform Aanderaa Instruments -water level sensor 3190 (vented pressure transducer) - datalogger 3634	The upgrade process considers the installation of a downward-looking radar in open air to measure distance to the sea surface. Please see Chile national presentation at TWLWG2 for more details about the ongoing upgrade process and data transmission options http://www.iho.int/mtg_docs/com_wg/IHOTC/TWLWG2/TWLWG2_3-Chile.pdf

	Short-term (hydrography)	Aanderaa Instruments -water level sensor 3190 (vented pressure transducer) - datalogger 3634	
China (MSA)	Long Term	Mechanical Float Type Tide Gauge with digital output A-OTTK20.20.302, and SCA11-3 Pressure Gauge	Tide stations in China are operated by several national and local governmental organizations, This table only shows those operated by China MSA. Usually installed with tide staff
	Short Term	Pressure Gauge	
Denmark	Long Term National Network operated by Danish Maritime Safety Authority (DaMSA) 9 stations in inner Danish waters Short term (for hydrography in Greenlandic waters	Acoustic Pressure	In a well. Data are transmitted every 10 minutes and made available at web page. See web page for DaMSA): <u>http://ifm.frv.dk/index.asp?LANG=ENG</u>
	Long Term National Network operated by Danish Meteorological Institute (DMI) 15 stations in Danish Waters	Pressure sensor supplemented with temperature or temperature plus conductivity	In a well Data are transmitted every 10 minutes and made available at web page. Map: http://www.dmi.dk/dmi/index/danmark/vandstand.htm and station list: http://www.dmi.dk/dmi/index/hav/maledata/stationsliste.htm Map and station list also includes gauges operated by DaMSA and DCA.
	Long Term National Network operated by	24 pressure gauges	Typically in plastic, iron or steel pipe
	Danish Coastal Authority (DCA) 41 stations in Danish Waters	17 float gauges	Typically in a well or steel pipe

	Long Term National Network operated by Danish National Space Center 3 stations in Greenlandic waters	Sensor: Aanderaa WLR7 pressure, salinity, temperature sensor, air pressure sensor: Vaisala PTU-200 Class A	Configuration: metal pipe attached to pier
	Short term for geodetic field work	Sensor: Global Water WL16 pressure sensor (auto air pressure and temperature compensation)	Configuration: weight-down sensor deployed by cable from coast
Ecuador	Long Term National Network	Mechanical Float type tide gauge with digital output. Stevens AXSYS System, Encoder. Float Stevens GS-98, Encoder, Float	11 stations with GPRS transmission system with solar panels operated by Instituto Oceanografia de la Armada de Ecuador. See http://www.inocar.ec/mareas/mareas.php
	Short Term Hydrography	Pressure gauge Stevens PS3000 – PS2100 OTT Models - hydrology	Operated by Instituto Oceanografia de la Armada de Ecuador Bottom mounted and usually installed with a tide staff. It installs a rule and sensor housed inside PVC
France	Long-term RONIM network (National Network)	Krohne radars – ELTA dataloggers – OTT HDR DCP – ADSL/GPRS modems	Operated by SHOM Stilling well or open air
	Short-term (hydrography)	Sea-Bird SBE 26plus	Moored
Germany	Long Term National Network operated by the Federal Waterways and Shipping Administration (WSV)	150 Mechanical float systems : Type tide gauge with electrical transducer, an angle decoder	Data are measured and transmitted every minute. It is available at web page for showing and download. See web page for WSV : <u>http://www.pegelonline.wsv.de</u>

Germany Continued	Long Term Internal National Network operated by State Agency for Agriculture and Environment Rostock	6 Multi Parameter Probes	Federal State of Mecklenburg-Western Pommerania ; See web page <u>http://www.imk-mv.de</u>
	Long Term National Network operated by Schleswig-Holstein's Government- owned company for Coastal Protection, National Parks and Ocean Protection	7 tide gauges	Federal State of Schleswig-Holstein <u>http://www.umweltdaten.landsh.de/public/hsi/index.html</u>
	Long Term National Network operated by Hamburg Port Authority (HPA)	6 tide gauges	Free and Hanseatic City of Hamburg <u>http://www.bsh.de/aktdat/wvd/elbepegel.htm</u>
	Long Term National Network operated by Lower Saxony Water Management, Coastal Defence and Nature Conservation Agency .	8 tide gauges	Federal State of Lower Saxony <u>http://www.nlwkn-</u> <u>pegelonline.de/gewaesserdaten/oberflaechgew/abfluesse/tidepegel/tidekarte.htm</u>
Iceland	Long Term (National Network) State Operated	Pressure, Druck transducer	Operated by Faxafloahafnir and the Icelandic Coast Guard. Data are transmitted every 10 minutes and made available at web page http://vedur.mogt.is/harbor/?action=Stations&harborid=1&stationid=1004 For 1 minute interval see http://www.ioc-sealevelmonitoring.org/station.php?code=reyk
	Short Term Hydrographic Surveys	2 Pressure gauges	Installed with a tide staff

Italy	Long Term (National Network) Site: Genova	Mechanical "Thomson" (float) data series since January 1884 OTT thalimedes (float) data series since December 2001 OTT RLS (radar) data series since April 2010	The measurement system is composed of two different instruments: the classical mechanical float tide gauge (Thomson) and electromagnetic codifier (OTT Thalimedes) for converting the lineal movement of the wire float to a digital value with a precision of millimetres or centimetres. The acquisition system is a dataloger with a modern connexion to transmit the data from the tide gauge station to the data centre in Genova. Since April 2010 the system is integrated with a radar sensor (OTT RLS).
	Long Term (Natinal Network) Site: Brindisi	Mechanical 'Thomson'' float data series since January 1972 OTT Thalimedes (float) data series since December 2003	The measurement system is composed of two different instruments: the classical mechanical float tide gauge (Thomson) and electromagnetic codifier (OTT Thalimedes) for converting the lineal movement of the wire float to a digital value with a precision of millimetres or centimetres. The acquisition system is a dataloger with a modern connexion to transmit the data from the tide gauge station to the data centre in Genova.
	Short Term Site: Piombino	OTT Kalesto (radar) data from April 2007 to June 2008	The acquisition system is a dataloger with a modern connexion to transmit the data from the tide gauge station to the data centre in Genova.
	Short Term Site: Savona	OTT Kalesto (radar) data since June 2009	The acquisition system is a dataloger with a modern connexion to transmit the data from the tide gauge station to the data centre in Genova.
	Short Term	OTT Orpheus (pressure) OTT Orpheus Mini (pressure) New acquisition 2010	Hydrographic Expedition IIM and UUNN Set of data for short periods of Hydrographic Survey
Jamaica	Long Term - National	Acoustic	Operated by the Meteorological Service, Jamaica- Position 17° 55' 33" N - 76° 50' 45" W
	Network		
Japan	Long-term (National Network)	Japan Coast Guard (JCG) Digital Float Type Tide Gauge - DFT - Sonic Corporation	Tide stations in Japan are operated several national and local governmental organizations including JCG, JMA, and GSI. Sea level data observed at tide stations of three organizations are transmitted to the headquarters of each organization on real-time base. And then, JCG and GSI send the data to JMA in real-time for the purpose of the disaster prevention.

		Japan Meteorological Agency (JMA) Digital Float Type Tide Gauge Acoustic Tide Gauge Acoustic Tide Gauge with Sounding Tube Geographical Survey Institute (GSI) Digital Float Type Tide Gauge	Real-time sea level information of tide stations around Japan is available on the following site: http://bosaidata.kishou.go.jp/marine/choui_map.html
	Antarctica Syowa Station	Pressure Gauge – Meisei Electric Co,. Ltd.	Operated by Japan Coast Guard. 30-second interval data are transmitted to Japan once an hour.
	Short-term (hydrography)	Pressure Gauge – Rigo Co., Ltd.	Bottom mounted and usually installed with a tide staff.
Korea Republic of	Long-term (National Network)	Mechanical Float Type Tide Gauge with digital output A-OTT(28 stations) - 28 stations	A digital observation began while starting telemetering system in an after 1997. Currently our country is operating 39 Tidal stations. the Tidal station of a past analogue became a digital method in incense on expansion to national ocean observation network, and it is expanded with a monitoring system to let ocean physics investigation system. Data collected in 39 Tidal stations are servicing real time through the CDMA(Code division multiple access) The goal is determine coastal marine boundaries by basic tidal datums and support for tsunami and storm surge warning systems, climate monitoring, coastal processes and tectonic research.
		Micro Wave(MIROS, SM- 094) - 11 stations	The Microwave equipment therefore provides accurate range measurements and high long term stability. Due to the low frequency of operation, fog, rain and water spray will not cause measurement problems. It is the equipment which is very suitable by a watch of a storm surge. Also, compare it to other equipment, and installation of observation equipment is easy.
		RBR TGR-2050	Bottom mounted and usually installed with a tide staff
	Short-term (hydrography and shoreline mapping)	Aanderaa WLR7	High precision quartz pressure transducer housed in a pressure case. Measurement cycle is triggered by a high precision clock. Integration time of the pressure measurements eliminates pressure fluctuations due to waves.

Morocco	Short term hydrography	Pressure EOPM Digital Tide Gauge Pressure Sutron 8210 Digital Tide Gauge	Operated by the Moroccan Navy (Division Hydrographie et Cartographie)
Netherlands	Long Term (National Network) see <u>http://www.rijkswaterstaat.</u> <u>nl/water/scheepvaartbericht</u> <u>en_waterdata/index.aspx</u>	Digital Float Gauge (DNM). Radar Tide Gauge: Radac Waveguide. See <u>http://radac.nl/userfiles/broch</u> <u>ure-</u> <u>freespace%20ex%20version</u> <u>%20website(1).pdf</u> Etrometa Stepgauge. The stepgauge is placed vertically and detects the level of water with a line of metal electrodes SAIV pressure tide gauge. See	Operated by Rijkswaterstaat Ministerie van Infrastructuur en Milieu. Real time information of tide stations around the Netherlands is available on: http://www.rijkswaterstaat.nl/water/scheepvaartberichten_waterdata/index.aspx
		<u>http://www.saivas.no/upload/</u> <u>TD304_091026.pdf</u>	
	Long-term National Network	Gas bubbler with Paroscientific PS2 pressure sensor, downward ultrasonic, downward radar	Network of 18 sites at open coast locations around New Zealand and Chatham Island operated by the National Institute of Water and Atmospheric Research Ltd. See http://www.niwa.co.nz/our-services/online-services/sea-levels .
New Zealand	Long-term National Network	Druck PTX 1830 vented pressure sensors	Network of 17 sites around New Zealand and on off-shore islands established to monitor sea level for tsunamis. Other equipment at sites includes Quanterra digitiser and datalogger, GPS for timing, backup battery power supply. Data transmission at 1Hz using DSL router, CDMA or VSAT. Network established and maintained by Land Information NZ in partnership with GNS Science. See <u>http://www.linz.govt.nz/hydro/tidal-info/gauges/sea- level-data-downloads/index.aspx</u> .
	Long-term port installations	Various sub-surface pressure transducers, float and stilling well, down-looking radar and ultrasonic systems	Sites operated independently by either the local port company or regional council.

	Antarctica	Gas bubbler with Paroscientific PS2 pressure sensor	Site at Scott Base operated by the National Institute of Water and Atmospheric Research Ltd and Antarctica NZ.
		Geokon 4500ALV vented vibrating wire pressure sensor	Site at Cape Roberts operated by Land Information NZ.
	Short-term (hydrographic surveys)	Valeport 740, Troll 700 vented	Deployed by private hydro survey companies
	Long Term	Pressure and tide pole	Operated by the hydrographic unit of the Royal Navy of Oman
Oman,	Short Term – for hydrographic surveys only	Pressure, Radar sensor and tide pole	Operated by the hydrographic unit of the Royal Navy of Oman
Suitanate of	Long Term – MSL observations		Operated by the University of Hawaii – 3 gauges installed
Papua New Guinea	Long Term	SEAFRAME	Operated by the Bureau of Meteorology Australia, funded by Australian Agency for International Development. More information at: http://www.bom.gov.au/pacificsealevel/index.shtml
	Long Term – National Network (Talara, Paita, Lobos de Afuera, Chimbote, Callao, Pisco, San Juan y Matarani)	8 standard mechanical Tide Gauges	Tide Gauges placed in booths, composed of a digital clockwork system, tackles, float and a tide staff. Continuous analogue recording equipment, monthly broadcast overland, monitored by the Directorate of Hydrography and Navigation.

	Long Term – National Network (Callao)	1 pressure sensor InterOcean and datalogger Vaisala, model Milos 500	Recording every minute. Transmits the information every minute by radio connexion on the 2.1 Ghz band, monitored by the Directorate of Hydrography and Navigation.
	Long Term – National Network/Tsunamis Warning System (La Cruz, Talara, Paita, Salaverry, Chimbote, Callao, Pisco, San Juan, Matarani e Ilo)	3 pressure sensors Druck 1830 Vaisala, model Handar 555.	Recording every 2 minutes, hourly transmission by satellite GOES, monitored by NOAA/PTWC.
	Long Term – National Network/Tsunamis Warning System (La Cruz, Talara, Salaverry, Chimbote, Callao, Pisco, San Juan, Matarani e Ilo)	10 sensors radar VegaPuls62 type and datalogger GEONICA model Datamar 2000C	Sampling evry second and average calculation every minute, transmission by cellular GPRS, monitored by the Directorate of Hydrography and Navigation.
Philippines	Long Term (National network) Hydrography Department, National Mapping and Resource Information Authority.		

1 station with tide house 1 station with tide-pole platform	Acoustic Aquatrac, pressure sensor Radar sensor with temperature sensor. SATlink Transmitter	Near real-time telemetry, data are transmitted every minute. For sea level and tsunami monitoring. Installed with tide staff.
1 station with tide house 1 station with tide-pole platform	Acoustic Aquatrac, pressure sensor Radar sensor. SATlink Transmitter	Near real-time telemetry, data are transmitted every minute. For sea level and tsunami monitoring. Installed with tide staff.
3 stations with tide house	OTT Float type with Thalimedes	Data transmission through local network. Installed with tide staff.
3 stations with tide house	OTT Float type with Thalimedes	Data downloadable every 6 months.
Long Term (National network) Hydrography Department, National Mapping and Resource Information Authority. (NAMIRA) Long term stations		
11 stations with tide house	OTT Float type with Thalimedes	Data downloadable every 6 months. Installed with tide staff
16 stations with tide house	Stevens water level recorder float type with Ax sys datalogger.	Data downloadable every 6 months. Installed with tide staff
1 station – no tide house	Portable wave and tide gauge, Pressure type (Inter- Ocean)	Data downloadable every 3 months. Installed with tide staff
1 station – no tide house	STS Portable Tide gauge, Pressure type	Data downloadable every 6 months. Installed with tide staff
Short term stations (Hydrographic Survey) Hydrography Department NAMIRA	STS portable tide gauge, pressure type	Operated by survey ship

	Long-term (National Network)	Analog and Digital Float Tide Gauges (OTT), Pressure (Valeport 740, Druck PDCR 1830), Acoustic (Aquatrak), Radar (Krohne, Vegapuls)	Operated by the Portuguese Hydrographic Institute (Instituto Hidrográfico). Radars: installed in open air. Acoustic sensor: installed in stilling well. Pressure sensors (vented): bottom mounted and usually installed with a tide staff.
Portugal		Float, Acoustic (Aquatrak)	Operated by the Portuguese Geographic Institute (Instituto Geográfico Português). Installed in stilling wells.
		Radar (Vegapuls), Pressure	Operated by the University of the Azores, Department of Oceanography and Fisheries (Universidade dos Açores, Departamento de Oceanografia e Pescas). Radars: installed in stilling wells or open air.
	Short-term (hydrography)	Pressure (Valeport 740, LevelTROLL 700)	Operated by the Portuguese Hydrographic Institute (Instituto Hidrográfico). Vented pressure gauges.
South Africa and Namibia	Long-term (National Network)-12 gauges	OTT Radar tide gauge- Connected via modem 4x fitted with OTT DCP satellite transmitters	Fitted on davit extending 1.4m from quay wall, 1.2m in height. Surveyed into National benchmark network.

SpainLong-term National NetworkMechanical Float Type Tide Gauge with digital output AOTT Radar tide gaugeOperated by Institute of Oceanography Network: established in 1943, most of the longer time series of sea level belong to this network of 12 stations based on mechanical float gauges with digital output. The measurement system is composed of two different instruments: the classical mechanical float tide gauge (AOTT) and an optical or electromagnetic codifier for converting the lineal movement of the wire float to a digital value with a precision of millimetres or centimetres. The acquisition system can be a dataloger or a PC computer both with a modem connexion to transmit the data from the tide gauge station to the data centre in Madrid. In Algeciras, Santander y Tarifa there is also a radar sensor with a datalogger and modem connection. The actual configuration of the stations provides data every 5 or 10 minutes. Only the station of Palma de Mallorca provides data every minute in order to monitories the seiches.Long-term National NetworkMechanical float gauges with digital output OTT models OWK16 / OTT 20.030 /SEBA R20Operated by Instituto Geográfico NacionalShort-term (hydrography)Valeport 740 Pressure GaugeOperated by Spanish Hydrographic Office Vented strain gauge	Spain	Long-term National Network	Pressure Gauge – Aanderaa WLTS 3791 Acoustic Tide Gauge Radar MIROS	Operated by Puertos del Estado. Real-time sea level information of tide stations around Spain is available on the following site. <u>http://www.puertos.es/en/oceanografia_y_meteorologia/redes_de_medida/index.html</u> The REDMAR tide gauge network is in operation since 1992. The goal is the real time monitoring of sea level and the generation of historical series for their further study. At this moment the network is composed of 6 SONAR acoustic sensors, 3 Aanderaa pressure sensors and 33 MIROS radar sensors. The latter ones also measure agitation.
Long-term National NetworkMechanical float gauges with digital output OTT models OWK16 / OTT 20.030 /SEBA R20Operated by Instituto Geográfico Nacional- radar sensors VEGA model VEGAPULS62- radar sensors VEGA model VEGAPULS62Operated by Spanish Hydrographic Office Vented strain gauge		Long-term National Network	Mechanical Float Type Tide Gauge with digital output AOTT Radar tide gauge	Operated by Instituto Español de Oceanografía The Spanish Institute of Oceanography Network: established in 1943, most of the longer time series of sea level belong to this network of 12 stations based on mechanical float gauges with digital output. The measurement system is composed of two different instruments: the classical mechanical float tide gauge (AOTT) and an optical or electromagnetic codifier for converting the lineal movement of the wire float to a digital value with a precision of millimetres or centimetres. The acquisition system can be a dataloger or a PC computer both with a modem connexion to transmit the data from the tide gauge station to the data centre in Madrid. In Algeciras, Santander y Tarifa there is also a radar sensor with a datalogger and modem connection. The actual configuration of the stations provides data every 5 or 10 minutes. Only the station of Palma de Mallorca provides data every minute in order to monitories the seiches.
Short-term (hydrography)Valeport 740 Pressure GaugeOperated by Spanish Hydrographic Office Vented strain gauge		Long-term National Network	Mechanical float gauges with digital output OTT models OWK16 / OTT 20.030 /SEBA R20 - radar sensors VEGA model VEGAPULS62	Operated by Instituto Geográfico Nacional
		Short-term (hydrography)	Valeport 740 Pressure Gauge	Operated by Spanish Hydrographic Office Vented strain gauge

United Kingdom	Long-term (National Network) see <u>http://www.pol.ac.uk/ntslf/tgi/</u>	Full Tide Bubbler	Low flow of dry air fed down air tube to the top of the pressure point. Bubbles released when air pressure and water pressure are equal; air line is proportional to the weight of the water
		Mid Tide Bubbler	Similar to above –single measuring nozzle mounted at mid-tide height allowing it to be accurately levelled into geodetic network.
		Direct Pressure Transducer	Differential transducers contained in a watertight housing. The copper nozzle, transducer measuring port and connecting tube are filled with oil so the pressure is transmitted to the crystal element via the oil, thus keeping the transducer components free from the effects of the saltwater.
		Rosemount WaveRadar Rex wave/tide gauges (see http://www.channelcoast.org)	Downward-looking microwave radar technique to measure distance to the sea surface
	Short-term (hydrography and shoreline mapping)	Valeport offshore 730 (now known as Valeport Midas WLR)	Precision Resonant Quartz transducer. Optional strain gauge transducer. The interior of the sensor is exposed directly to the water via a captive oil-filled tube.
		Valeport 740 (1 & 2 bar)	Vented strain gauge (no stilling well), with stainless steel mounting bracket.
		InterOcean Systems S4A with P sensor for tides	Silicon semi-conductor strain gauge. Solid state, no moving parts, temperature compensated. Housed in a spherical, glass-filled cycloaliphatic epoxy mooring rod, titanium 6 AL-4V
		Valeport miniTIDE	Temperature compensated piezo-resistive pressure transducer.
		Aanderaa WLR7	High precision quartz pressure transducer housed in a pressure case. Measurement cycle is triggered by a high precision clock. Integration time of the pressure measurements eliminates pressure fluctuations due to waves.
United States	Long-term (National Network)	Aquatrak downward sound pulse – Sutron Xpert DCP	Sounding tube within 6-inch diameter protective well with parallel plates and 2-inch orifice
		Paroscientific pressure (vented) – Sutron Xpert DCP	Dual- air driven pressure bubbler orifices separated by 1 m vertically
	Short-term (hydrography and	Aquatrak downward sound pulse – Sutron 8210 DCP	Sounding tube within 6-inch diameter protective well with parallel plates and 2-inch orifice
	shoreline mapping)	Paroscientific pressure (vented) – Sutron 8210 DCP	Single orifice air-driven bubbler – usually installed with tide staff
