

Global Sea Level Rise Effects submitted by UKHO

- 1.** Collaboration between the United Kingdom Hydrographic Office (UKHO) and the Proudman Oceanographic Laboratory (POL) is ongoing with respect to investigating the effects of Sea Level change on tidal ranges around the UK coast.
- 2.** Some progress has been made but no conclusive results are currently available. Both UKHO and POL are looking at the maximum (i.e. HAT – LAT) ranges and their variation over as long a period as possible, at locations where a good long-record of observed tidal data exists. POL provides representation within the GLOSS Group of Experts and so are approaching this study within the wider context of the GLOSS aims and objectives.
