The MSDI situation in the Finnish Hydrographic Office

31.1.2013

MSDI in the FHO

- The non-navigational use of hydrographic data has increased exceedingly

MSDI in the FHO

- The INSPIRE directive demands new activities and services from HOs.
 - The FHO has participated actively on the implementing work of National Geodata Portal
 - The metadata of FHO is available at the National Geodata Portal
 - Viewing service is in use via the interface of National Geodata Portal
 - The Finnish portal enables the design and publishing of embedded maps by building on the web service interfaces of public data providers at the national and local levels
 - Inspire specific national spatial data sets are on the planning phase
 - National software components have been taken into use (e.g. "LiviMap"=map interface in accordance with architecture of FTA)
 - Open data plays nationally in a significant role
 - A roadmap for opening hydrographic data has been created
 - Financial compensation models are under consideration in the Ministry of Transport
 - Developing the new version of viewing and downloading service has been started in FHO.
