Content

- Current situation
- Education as a component of MSDI
- People and Change
- Organisational Change
- Delivering Change
- IHO Response
- Summary

MSDI - Some Challenges!

- HO's organisational structures
- Ho's are traditionally conservative
- Resistance to change
- Lack of understanding of MSDI by decision makers in HO's
- How to adapt to the dynamic geospatial world
- Traditional cartography has given way to desktop and web based map and chart production
- Making a compelling argument to invest
- Investing in people to make change happen

... the biggest challenge

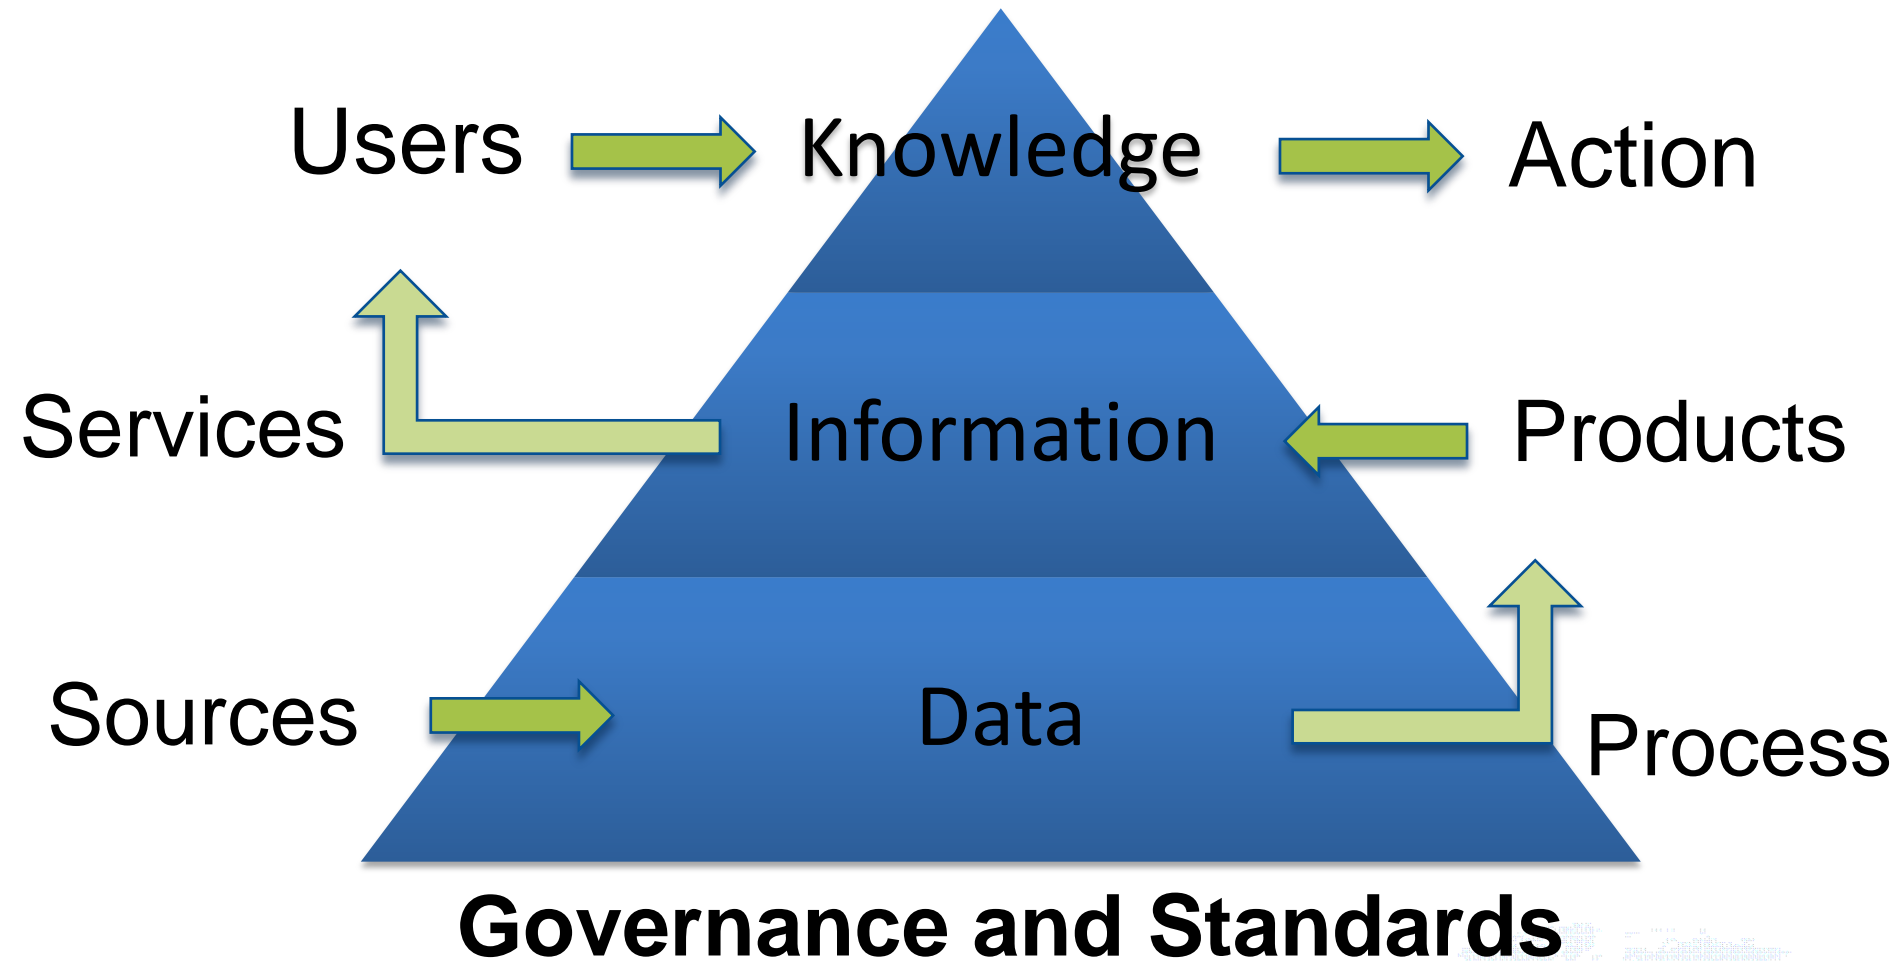

Why is Education Required?

MSDI is about...

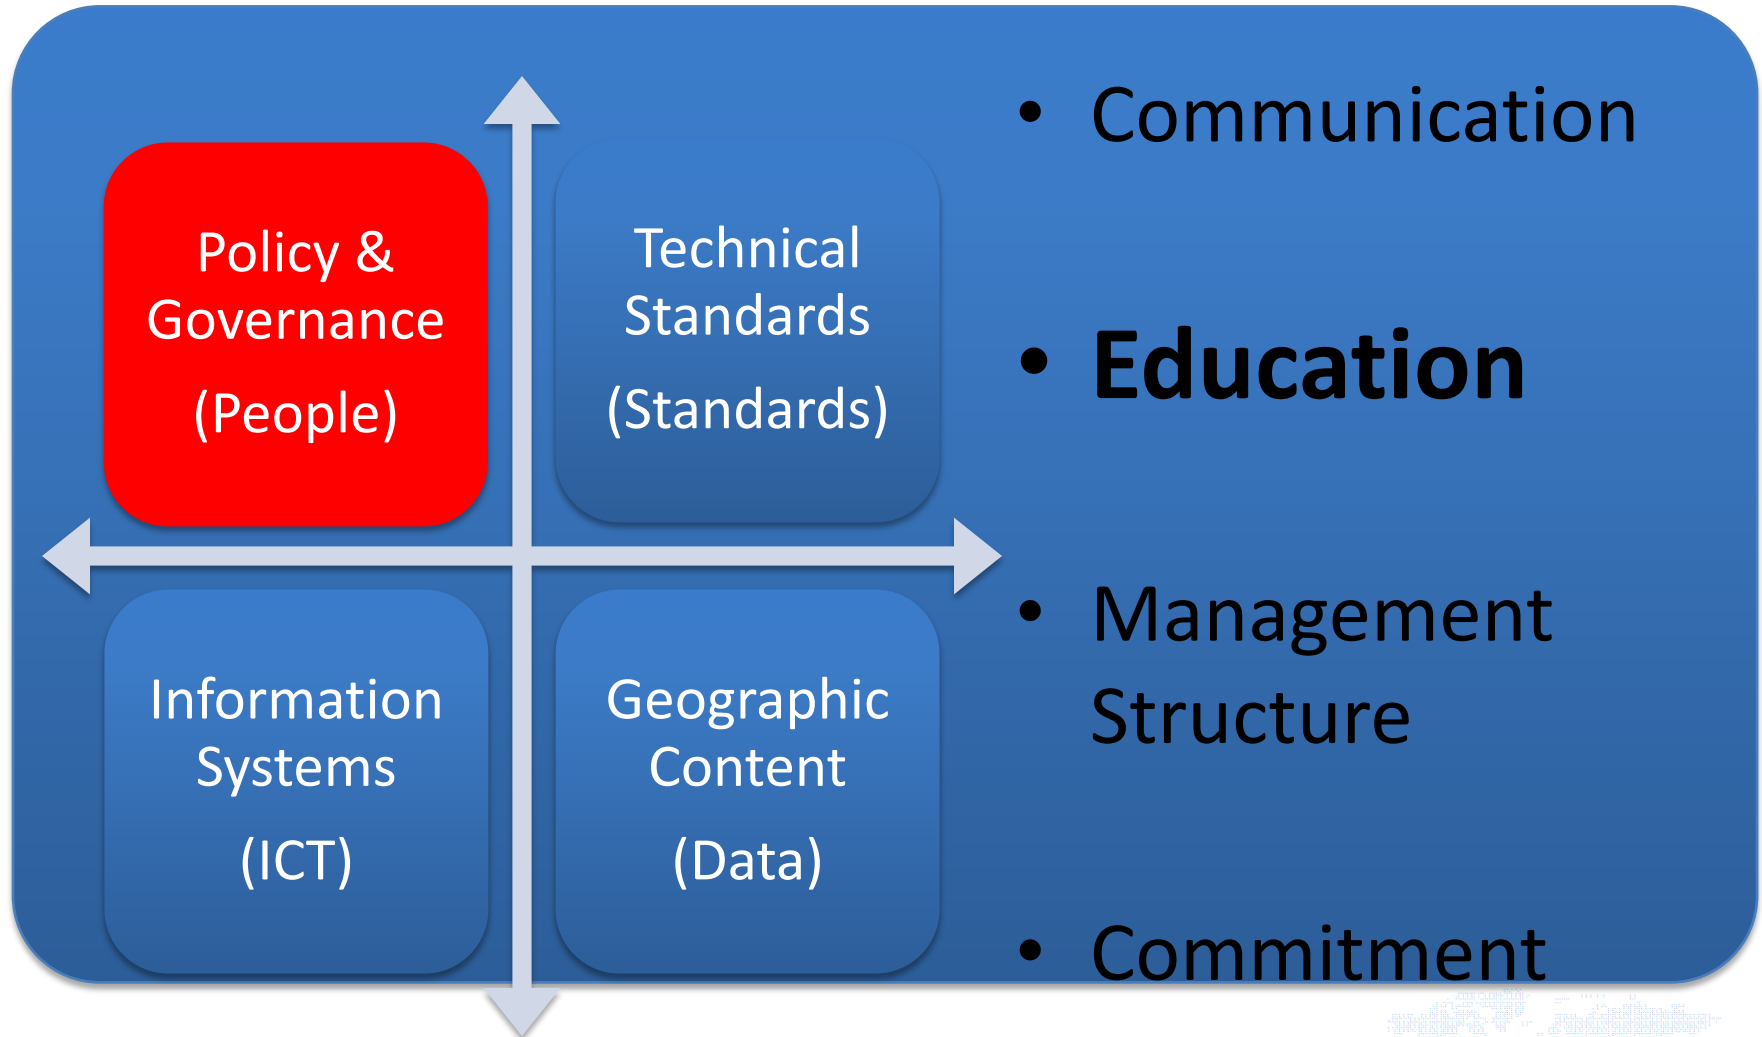

- ✓ Using data and information in a more informed manner
- ✓ Delivering “best practise”
- ✓ Good data management
- ✓ Data sharing and exchange
- ✓ Committed people
- ✓ Sharing knowledge and experience
- ✓ Working together towards common goals
- ✓ Long term programmes of work
- ✓ Contributing to regional, national and local requirements

...so we have much still to learn!

Data - Information - Knowledge

SDI - Components of Change

People and Change

- People are adaptable...BUT!
- People react to change in different ways
- Aversion to risk is common at an individual and collective level
- The “psychological contract” – people and the organisation
 - Conditions
 - Rewards
 - Holidays
 - Relationships
- Personal standing or prestige
 - Value of the Job
 - Imposition of change

Human Resistance to Change

People may find it difficult to embrace the changes in thinking and working practises to deliver MSDI because:

- They do not believe the change will work
- They believe the old way is better
- They might fail in doing things differently
- They do not trust the change “agent”
- The old way of doing things works!
- There is little evidence that the “new” way will work
- The pain of change is greater than staying the same

Types of Human Resistance

- **Active resistance**

- Being critical and finding fault
- Manipulation and sabotage of an idea or process

- **Passive resistance**

- Verbal agreements that fail to deliver
- With-holding information or resources
- Gate-keeping: selecting the information you want to hear
- Lack of knowledge about the changes required
- Fear of failure
- Lack of involvement in the process
- Can't be bothered!

The Process of Transition

The Human Aspects of SDI

Data Management and the wider issue of developing or participating in MSDI represents both a personal and organisational challenge to HO's. This may be due to:

- The traditional nature of the business of charting
- The focus on product output rather than data issues
- A hierarchical organisational structure

The Human Aspects of SDI (cont)

- The psychological contract with employees
- A conservative navigational market slow to adapt to the digital age
- Organisational inertia – the case for change has not been made
- Knowledge and skills lacking to develop a good digital infrastructure
- Lack of financial resources to fund change
- The organisation being process driven rather than market/ outcome focussed

What type of Organisation is your Hydrographic Office?

- Core business unchanged for many years (until now)
- Needs to modernise and overhaul its production processes (spatial and business data management)
- Hierarchical structure (Grade or Rank predominates)
- “Power” comes from position held in organisation
- Risk averse and slow to adapt...
- No real culture or stimulus for Change?

Bureaucratic...therefore poorly prepared to make MSDI a reality

Delivering successful Change (1)

➤ Set the Stage

- ✓ *Create a sense of urgency* –help others see the need for change
- ✓ *Pull together a Guiding Team* – with leadership skills, credibility, communications ability, authority, analytical skills and sense of urgency

➤ Decide What to Do

- ✓ *Develop the Change Vision & Strategy* to make the future a reality

Delivering successful Change (2)

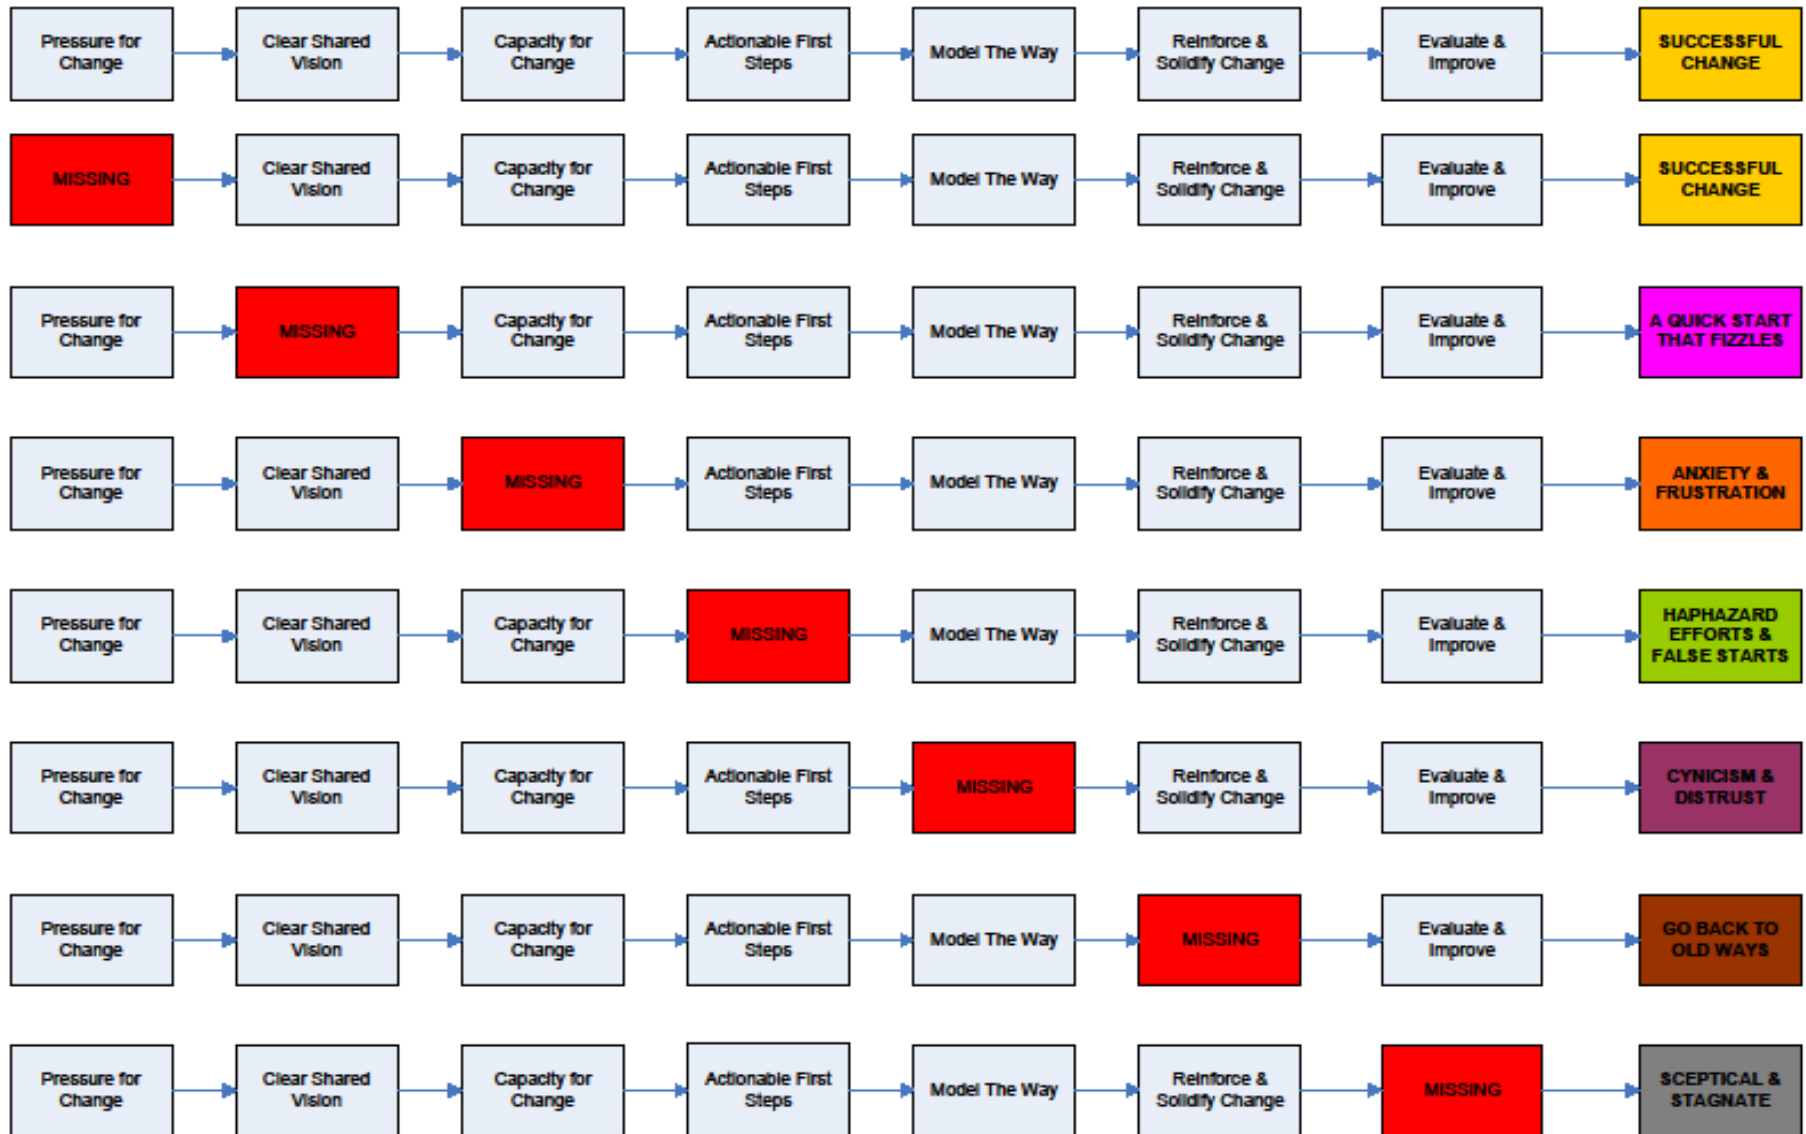

➤ Make it Happen

- ✓ *Communicate to get Understanding and Buy-In* – make sure others accept vision and strategic approach
- ✓ *Empower Others to Act* – remove barriers so that those who want to make the vision a reality can do!
- ✓ *Produce Short-Term Wins* – create visible, clear successes as soon as possible
- ✓ *Don't Let Up* – press harder and faster after first success to initiate change after change until vision is reality

➤ Make It Stick

- ✓ *Create a New Culture* – ensure momentum is maintained by all that replaces old ways of doing things

IMPLEMENTING SUCCESSFUL CHANGE

Check List - Things to Do

- Identify Organisational Culture
- Identify Change required
- Gain Stakeholder and Management Support
- Identify Key Staff to drive forward Change
- Participation will create ownership (The Guiding Team)
- Good Communication is Vital
- Imbue Values and Attitudes to change corporate culture
- Implement the Change with “Quick Wins”
- Training: New Skills will Reduce Resistance

IHO response to date...

- Training, Mentoring and Coaching in Data Management, Database Design, Data Publishing & MSDI
- Available to all MS's - Directors, Senior Managers, Middle Managers, Practitioners
- Flexible syllabus tailored to user needs
- Delivery through ALL RHC's
- Post learning assessments
- 5-year programme defined [2013-17]

e-Learning

- Develop an e-learning resource at IHO
 - library of information
 - technical and management papers
 - training programmes
 - specifications and standards reinforcing knowledge gained in the class room.
 - “distance-learning”
- open source solutions e.g Moodle. URL at <https://moodle.org/> and <http://vimeo.com/moodlehq/overview>.

So why do it?

- We have outmoded data management methods
- We need to adapt to the requirements of today's users
- We must resist perpetuating bad practises
- We may have to do it (e.g. INSPIRE)
- We can succeed together through education and learning!
- We need to avoid being left further behind as a community, technically and managerially
- Because we should all care about this!!!

Thank You
