S-100 Change Proposals

Table Recommended metadata for geographic datasets footnote correction (Table 4a-4 footnotes)

Name of the scope/type of resource for which the metadata is provided	MD_Metadata.metadataScope > MD_MetadataScope.resourceScope	C ₁
---	---	----------------

- a) The Profile imposes a mandatory obligation on the metadata element metadataIdentifier.
- b) Language: documented if not defined by the encoding process.
- c) characterEncoding: Documented if UTF-8 is not used and not defined by the encoding process.
- d) Documented if a higher level of hierarchy level exists (for example if the geographic 'dataset' is part of a 'series').

- e) Distance is preferred over equivalentScale because the scale will change when presented at different sizes on a screen. distance or equivalentScale must be documented if available.
- f) characterSet: Documented if ISO 10646-1 is not used.
- g) Include either the geographic bounding box (extents) or the geographic description (It is recommended that geographic bounding box should be used - see Section 5.6.3).
- h) If any one of west longitude, east longitude, south latitude or north latitude exists, then the remaining three must also be completed.

Source: Adapted from Table 3 - *Core metadata for geographic datasets* (ISO 19115:2005).

Mandatory attributes are nillable.
