Reason for Choice of Name (if a person, state how associated with the feature to be named):	Named from a Japanese seasonal event in Spring, "Hanami." Literal translation of Hanami is "Blossom viewing", while it generally means "Cherry blossom viewing" since cherry blossoms, which bloom in spring, is considered the national flower of Japan. This feature is located on the rear-arc of the West Mariana Ridge, a remnant island arc of the active Mariana Arc. Ishizuka et al. (2010) made an extensive sampling of this area, calling the knolls in this area "West Mariana Ridge Knolls". • Ishizuka O., et al., 2010, Migrating shoshonitic magmatism tracks Izu-Bonin-Mariana intra-oceanic arc rift propagation, *Earth and Planetary Science Letters*, 294, 111-122.

	Note that the undersea feature names in the Japanese chart #6723 largely consists of two major categories. One is relevant to season names or seasonal/annual event in Japan, and the other is to discovering ship (all are fishery boats except one). The names belonging to the former category were mostly accredited by JCUFN in 1994.
