

RAC-REMPEITC

Caribe

13th MESO AMERICAN AND CARIBBEAN SEA HYDROGRAPHIC COMMISSION CONFERENCE

November 20th – 23rd, 2012

Antigua, Guatemala

November 2012

Anne Réglain – RAC/REMPEITC-Caribe

Regional Marine Pollution Emergency Information and Training Center

Cartagena Convention

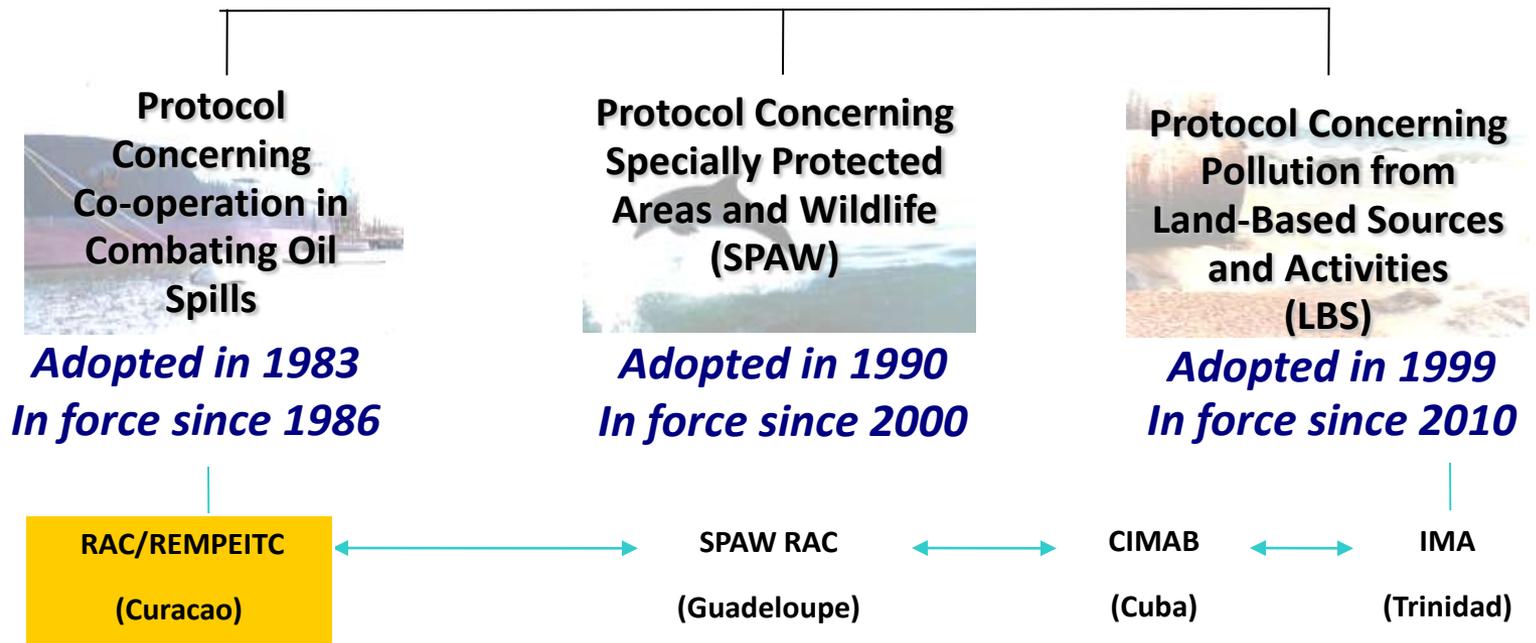

3

Cartagena Convention

1976: Caribbean Environment Programme (Regional Seas)

CARTAGENA CONVENTION
Adopted in 1983
In force since 1986

Missions

- Strengthen national and regional capabilities
- Exchange information and provide technical assistance
- Facilitate cooperation
- Promote the ratification of international IMO conventions

Activities

- Training courses, Regional seminars, Exercises, Technical support/consultancy

1/ Oil Spill Preparedness, Response and Cooperation

2/ Marine Pollution Prevention

- Pollution from Ships: garbage, oil...
- Invasive Alien Species: ships' ballast water management
- Harmful Anti-Fouling Systems on Ships

Welcome to RAC/REMPEITC-Caribe

The Regional Marine Pollution Emergency Information and Training Center for the Wider Caribbean (REMPEITC-Caribe) is a Regional Activity Center (RAC) for the Protocol Concerning the Cooperation in Combating Oil Spills in the Wider Caribbean Region (Oil Spills Protocol).

This website is designed to improve the oil spill response communication between the governments of the various countries of the Wider Caribbean Region and to provide information on oil spill pollution prevention and response for the Wider Caribbean Region.

You will find general information on our [activities](#), our objectives and our upcoming [events](#).

Oil spill response technical documents are downloadable and a country profile database is available to view to increase the cooperation within the Caribbean and Central American nations, other regional states, and centers.

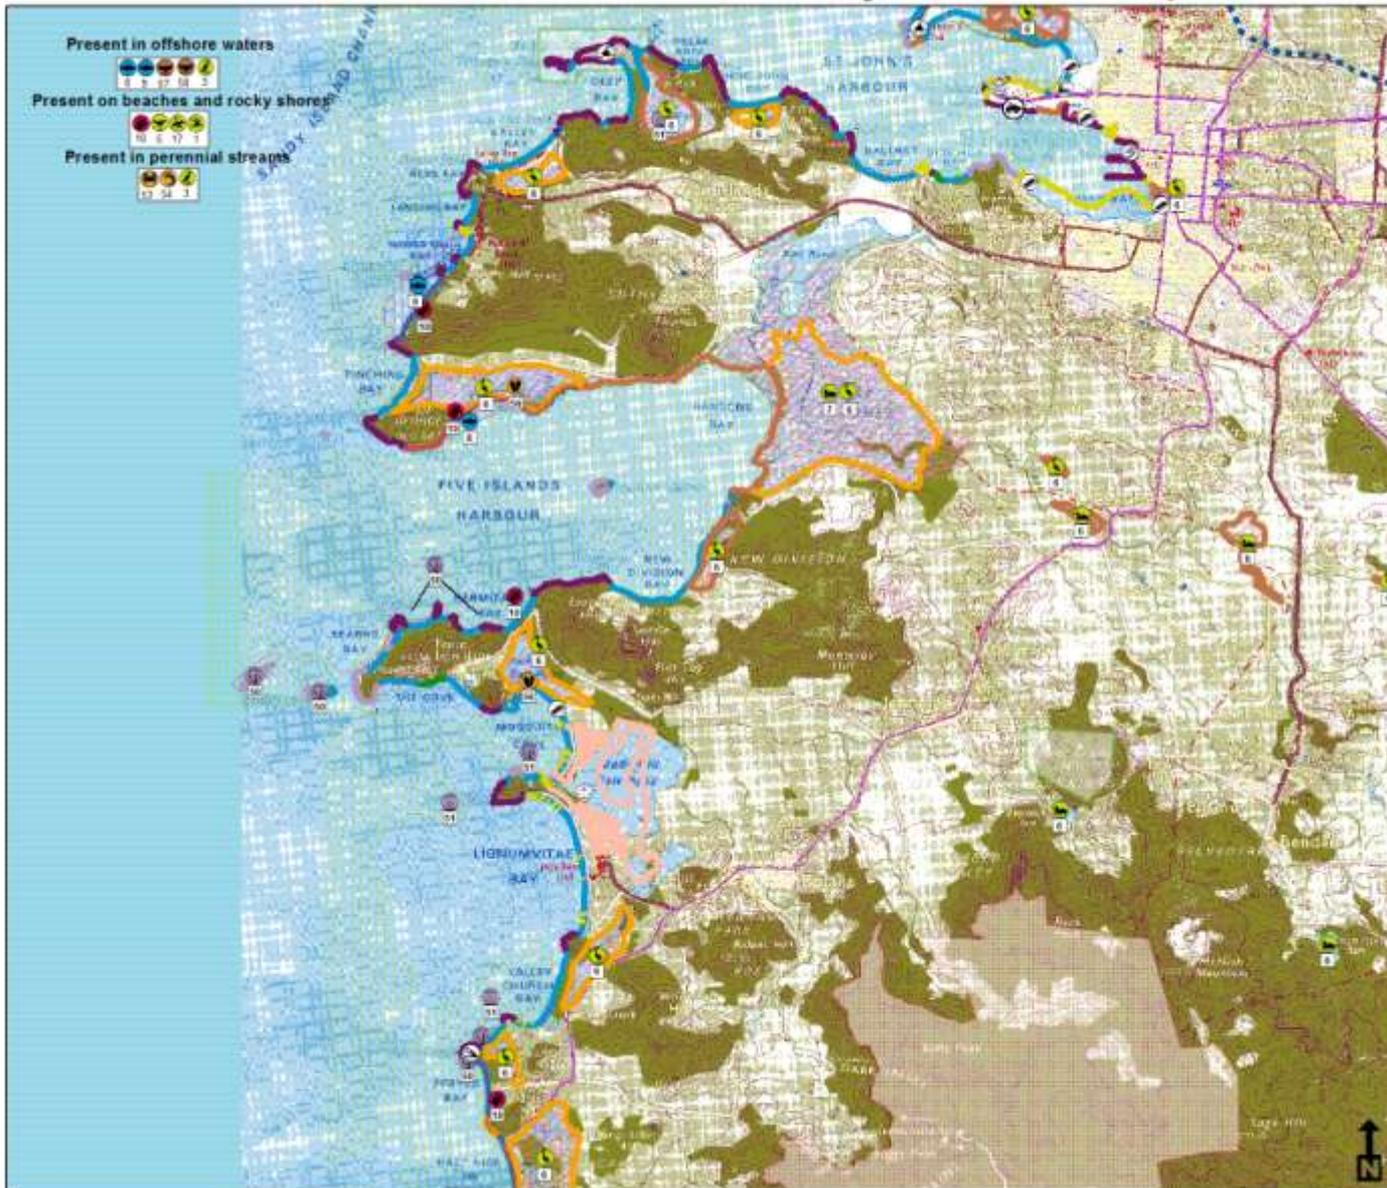

<http://cep.unep.org/racrempeitc>

Environmental Sensitivity Index Map (ESI Map)

- Geographically reference biological resources, human-use resources, and ESI-classified shorelines that are ranked based on their sensitivity to oiling
- Concise summary of coastal resources that are at risk if an oil spill occurs nearby
 - Birds, corals, turtles, mangroves, salt marsh, desalinization plant, fish farm ...
- Help planners and responders to:
 - Establish protection priorities
 - Identify cleanup strategies
 - Reduce the environmental consequences of the spill and the cleanup efforts

Environmental Sensitivity Index Map

West, Antigua ESI 2 (2012)

Legend

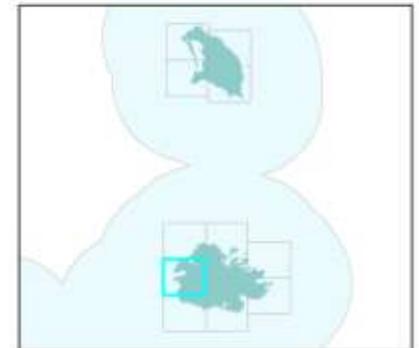

Shoreline Habitats (ESI) Antigua

- 1A Exposed rocky cliffs
- 1B Exposed, solid man-made structures
- 2A Exposed wave-cut platforms in bedrock
- 3A Fine- to medium-grained sand
- 5 Mixed sand & gravel
- 6A Gravel beaches
- 6B Riprap
- 8A Sheltered rocky shores
- 8B Sheltered, solid man-made structures
- 9A Sheltered tidal flats
- 9B Vegetated low banks
- 10D Mangroves

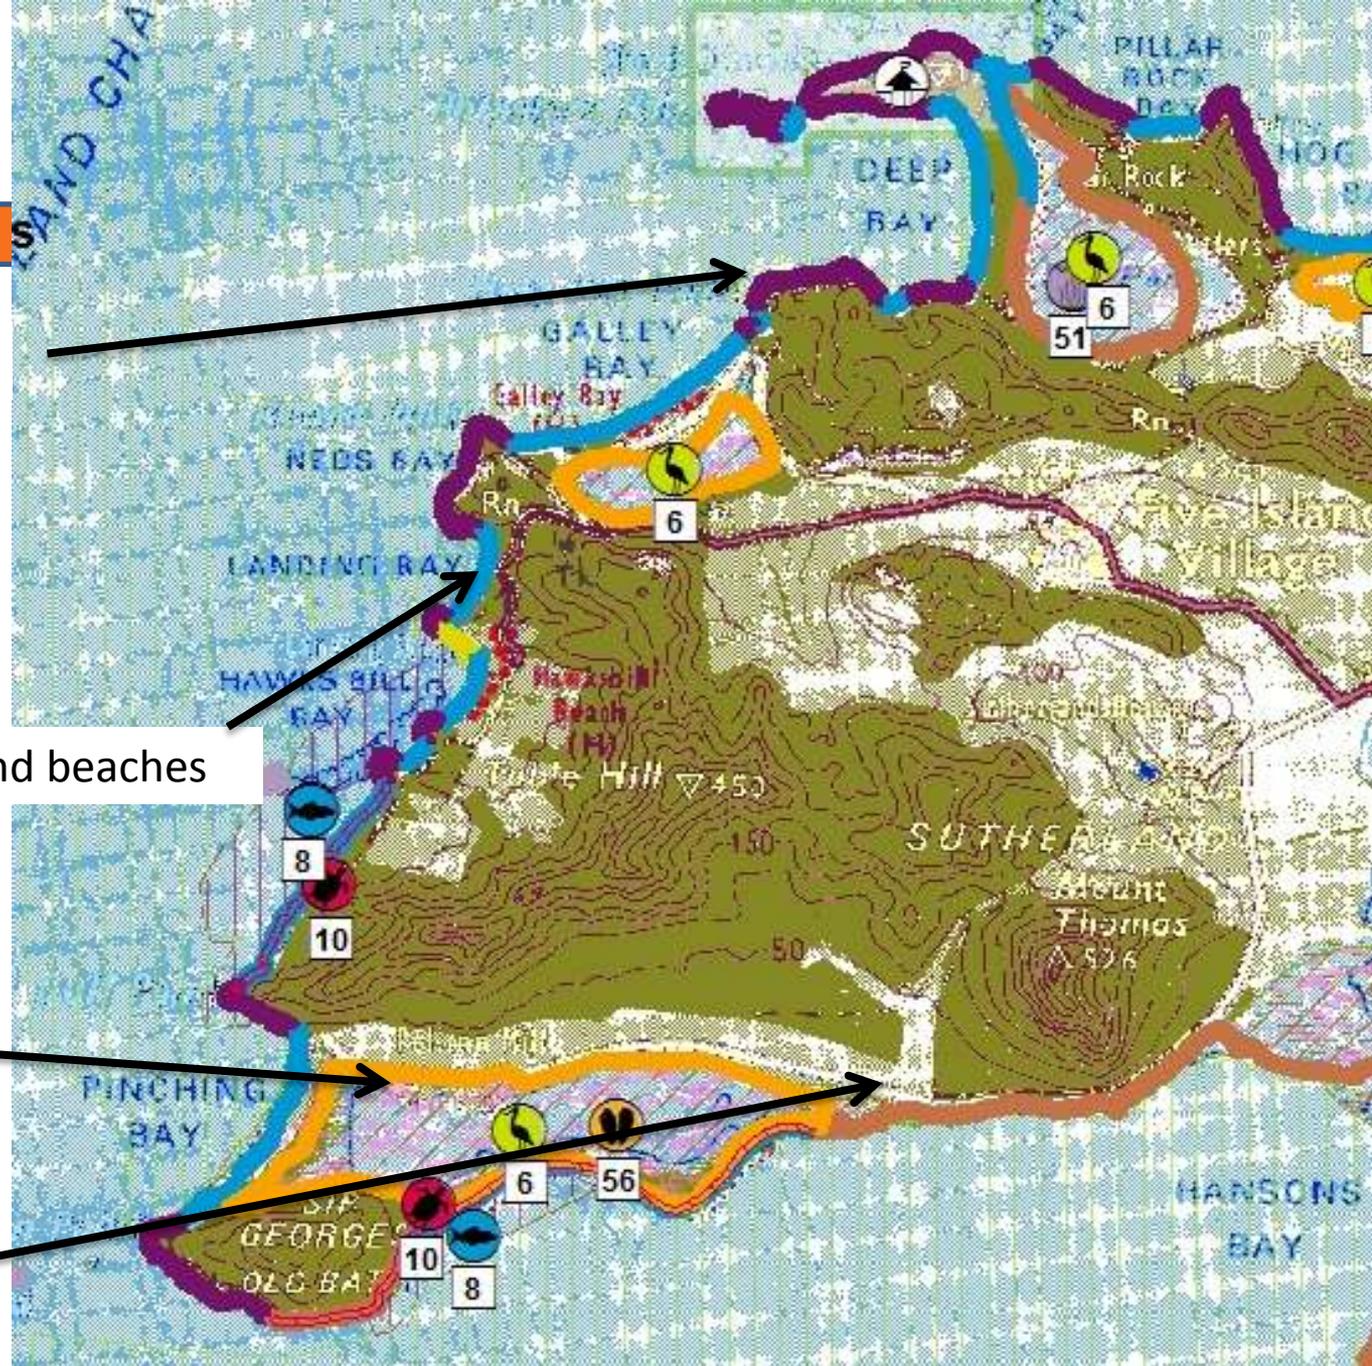

1:40,000

Sponsored by the
International Maritime Organization (IMO)
through the
Regional Activity Center/Regional Marine Pollution
Emergency, Information and Training Center
(RAC/REMPEITC-Carib)
in cooperation with the
National Office of Disaster Services (NODS)
Government of Antigua and Barbuda
2012

- Present in offshore waters
- Present on beaches and rocky shores
- Present in perennial streams

Wave cut rocky platforms

Fine to medium-grained sand beaches

Sheltered tidal flats

Mangroves

GIS-based database on the
maritime traffic in the Wider
Caribbean region

Purpose of the tool

12

- ✓ Better knowledge of the maritime traffic in the region
- ✓ Risk assessment tool
 - How many vessels pass close to my coastlines?
 - How many oil tankers, chemical tankers...?
 - Where are the biggest risks of accidents/spills?
 - ...
- ✓ Implementation of the Special Area under MARPOL Annex V
- ✓ Support to other initiatives
 - New particularly sensitive areas
 - Projects on the social impact of oil spills
 - Comparison maritime routes vs “marine mammals routes” ...

Methodology

13

Data: Lloyd's MIU, 2007/2008
Ships, ports of departure and
arrival, dates

**Theoretical computer-
based model:** rules and
restrictions

**GIS database
Online**

VOS data: real
positions of ships

Where do the
vessels really go
between ports?

**Validation and Improvement
of the database**

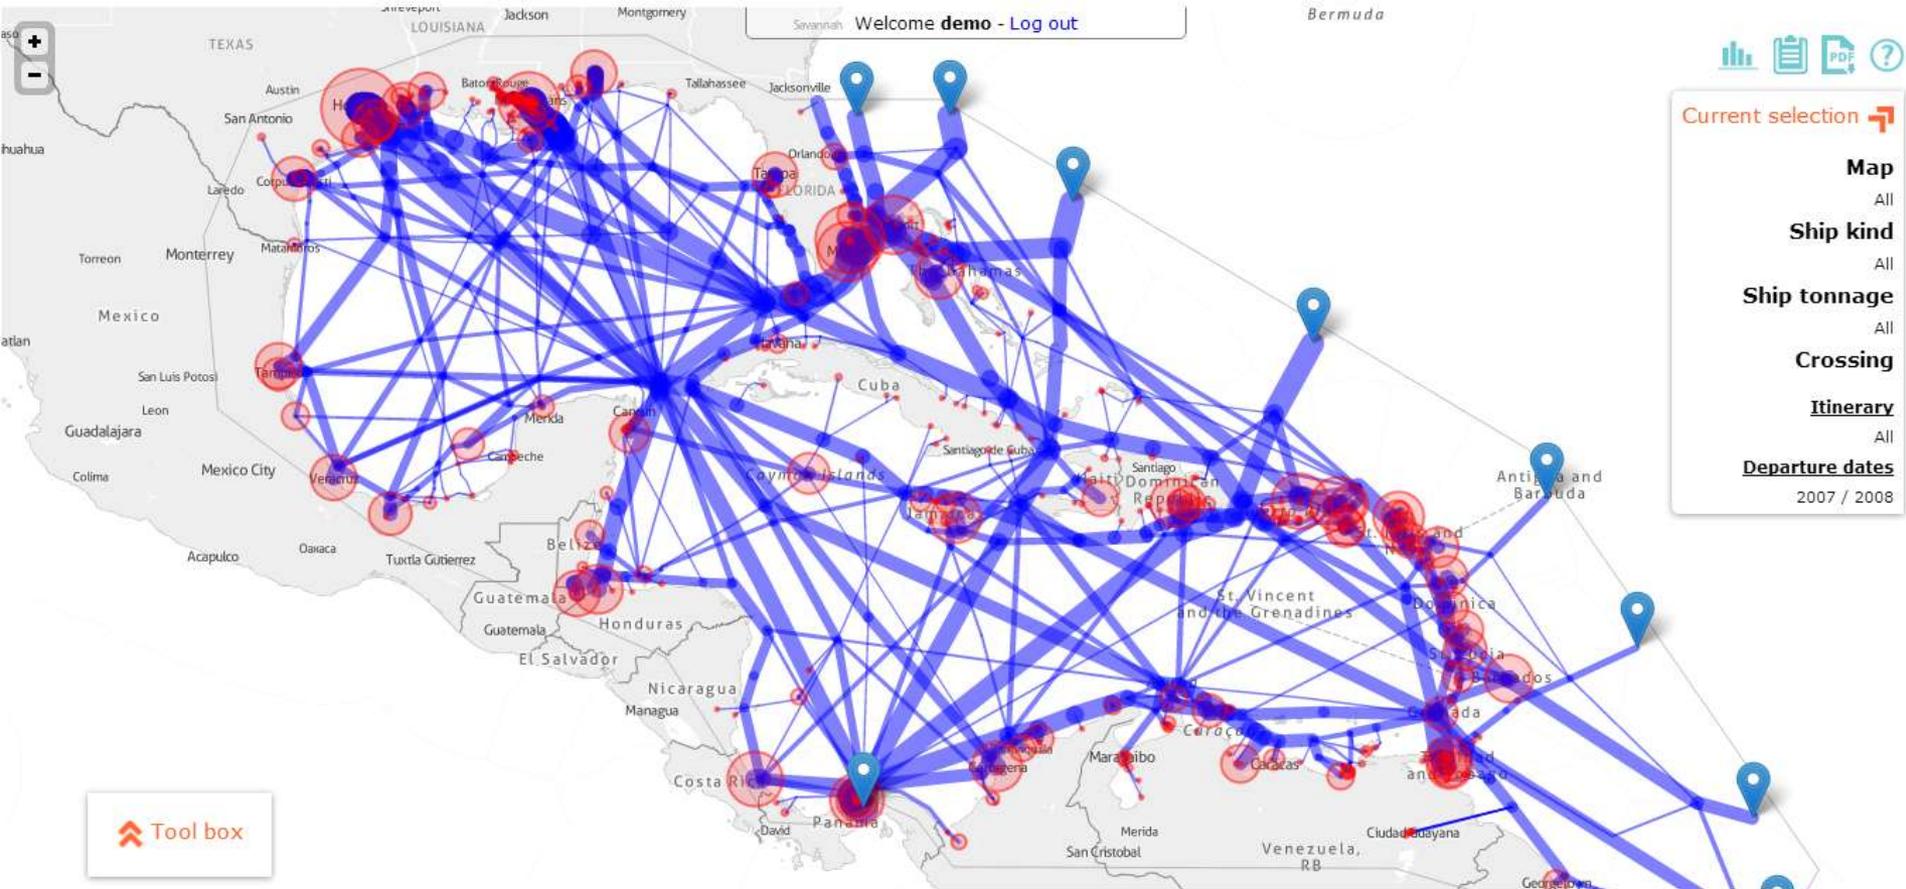

Methodology

14

Presentation of the tool

15

Presentation of the tool

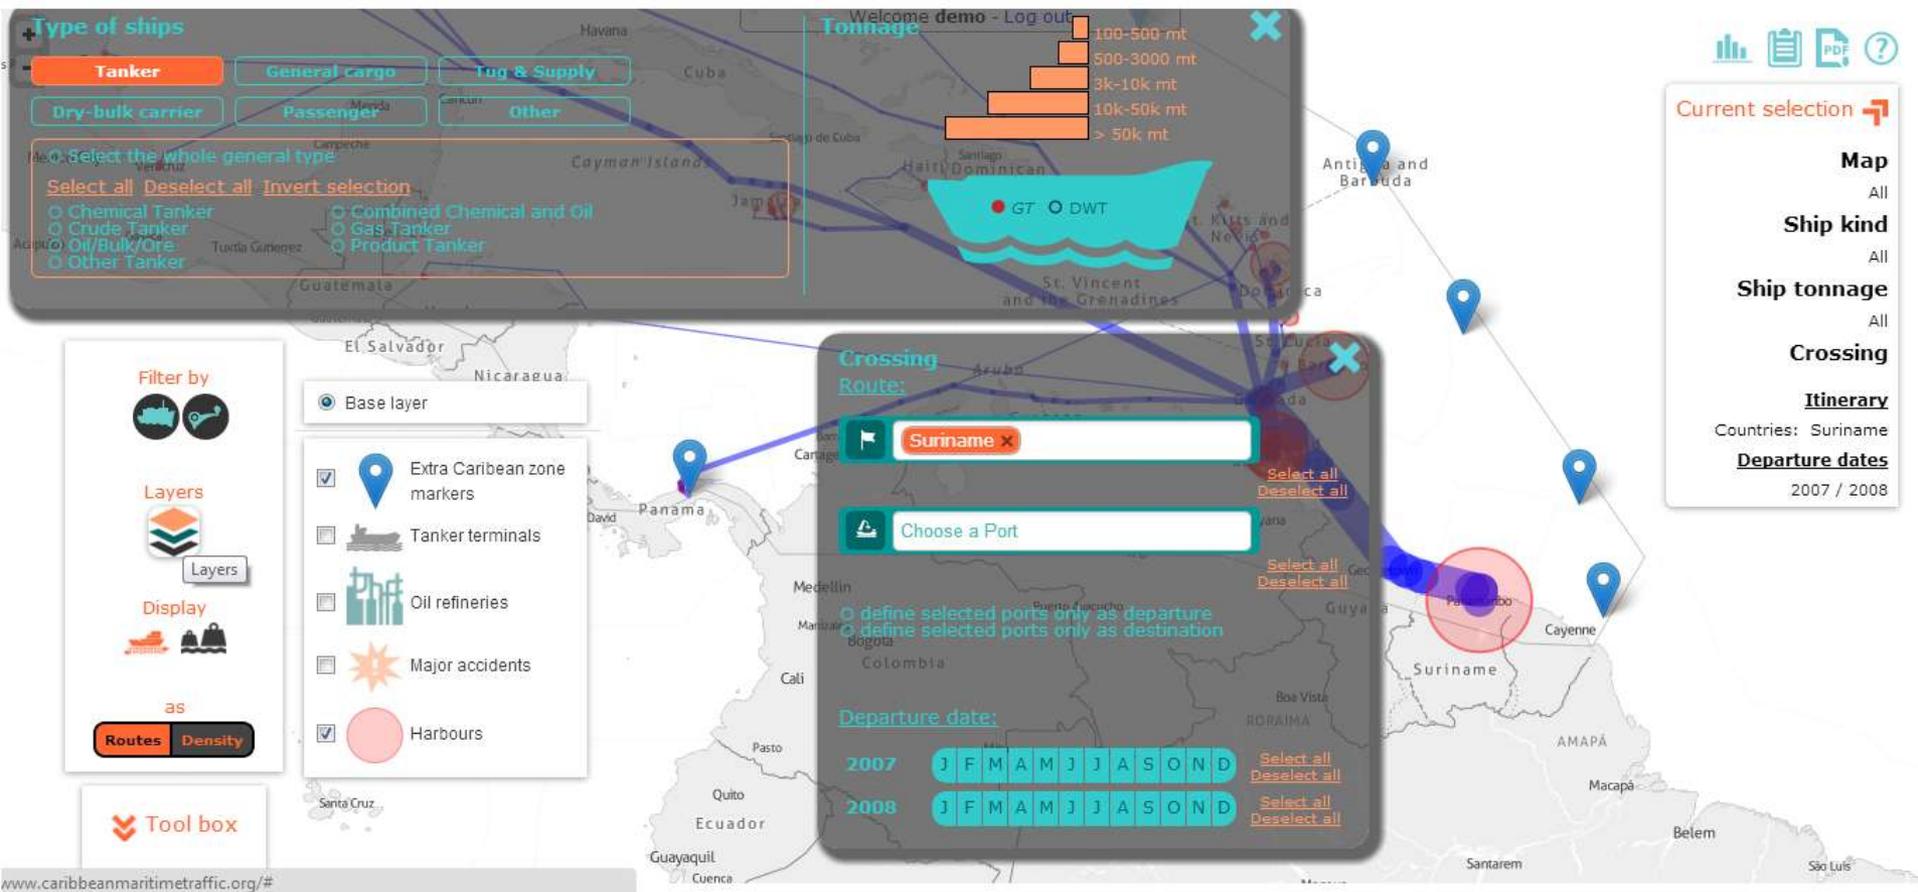

16

- ✓ Maritime Routes and Traffic Density
- ✓ Traffic in Ports
- ✓ Oil infrastructures (refineries and terminals)
- ✓ Main past oil spills

Presentation of the tool

17

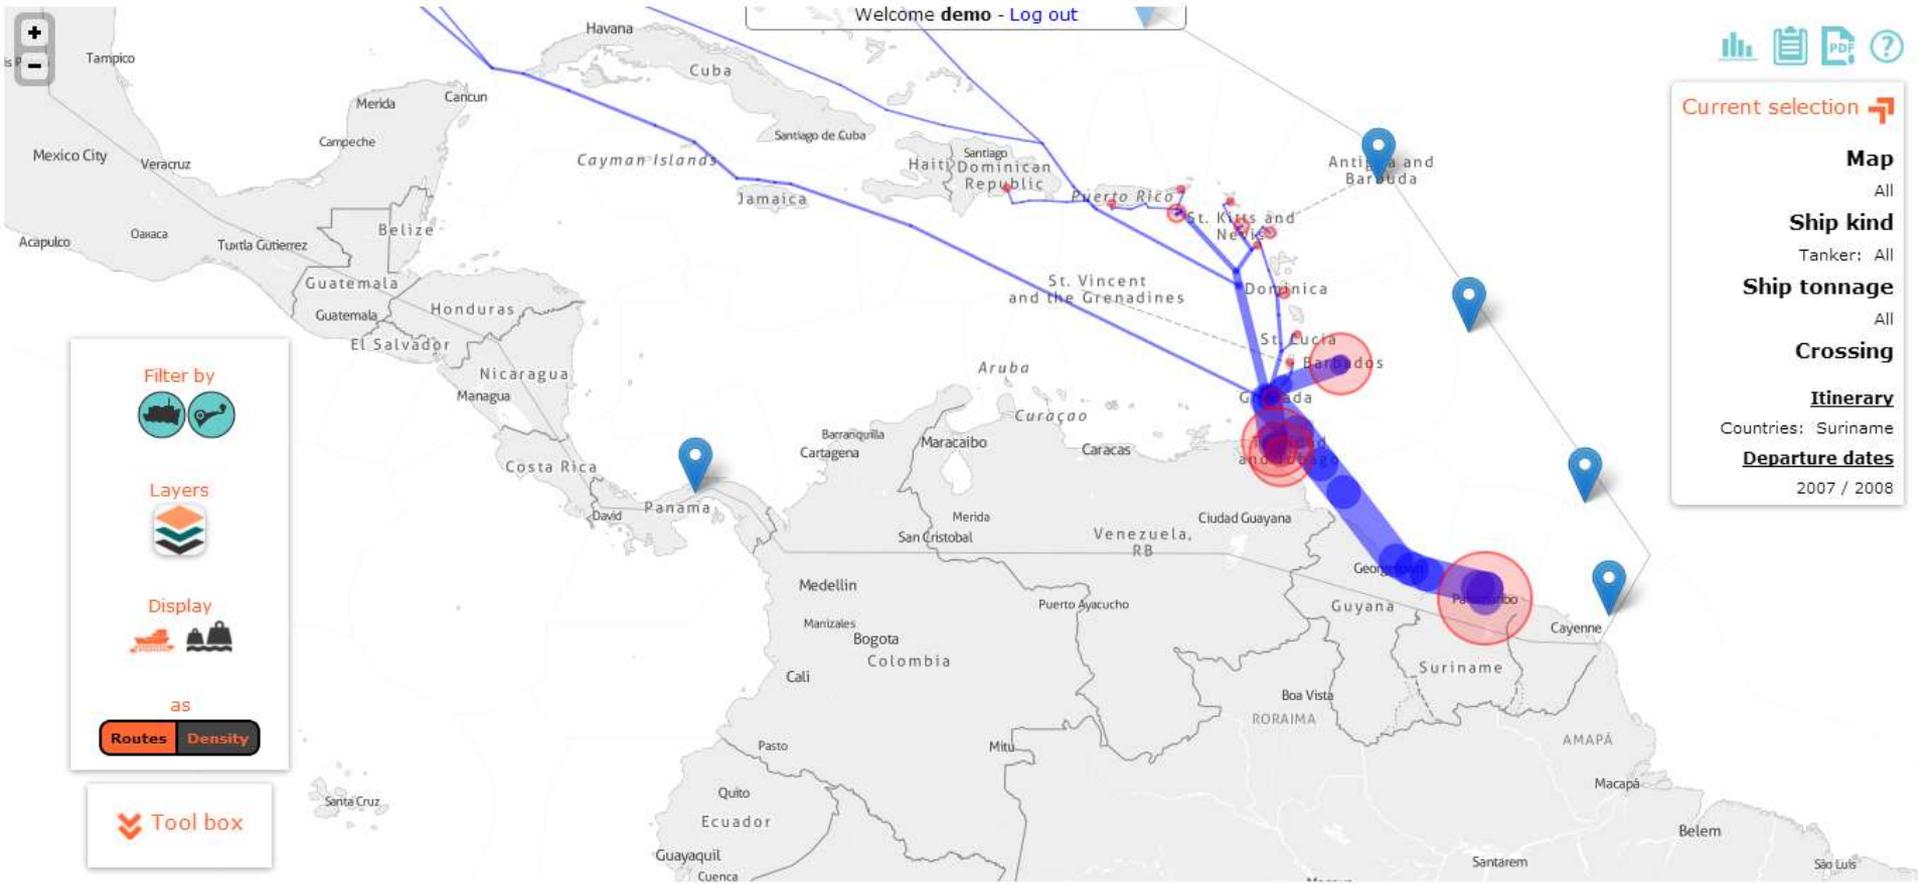

The screenshot displays the RAC-REMPEITC Caribe tool interface, which includes several key components:

- Type of ships:** A panel on the left with buttons for Tanker, General cargo, Tug & Supply, Dry-bulk carrier, Passenger, and Other. Below these are radio buttons for selecting the whole general type, and checkboxes for specific ship types like Chemical Tanker, Crude Tanker, Oil/Bulk/Ore, Other Tanker, Combined Chemical and Oil, Gas Tanker, and Product Tanker.
- Tonnage:** A bar chart showing tonnage ranges: 100-500 mt, 500-3000 mt, 3k-10k mt, 10k-50k mt, and > 50k mt.
- Map:** A map of the Caribbean region with various markers and overlays. A blue ship icon is shown in the center, and a red circle highlights a specific area in the Caribbean.
- Filter by:** A panel on the left with icons for different filters.
- Layers:** A panel on the left with checkboxes for Base layer, Extra Caribbean zone markers, Tanker terminals, Oil refineries, Major accidents, and Harbours.
- Display:** A panel on the left with icons for different display options.
- as:** A panel on the left with buttons for Routes and Density.
- Tool box:** A panel on the left with a red arrow icon.
- Crossing Route:** A panel on the right with a search bar for "Suriname", a "Choose a Port" button, and a calendar for selecting a departure date.
- Current selection:** A panel on the right with a red arrow icon and a list of selected items: Map, Ship kind, Ship tonnage, Crossing, Itinerary, Countries: Suriname, and Departure dates: 2007 / 2008.
